ERRATA.

Page 8, in the letter on the Corinth Canal *passim*. For "Kalamoki" read "Kalamaki."

Page 116, col. iii., first paragraph in the obituary of Mr. Lowell. See the correction on p. 141. Page 117, col. iii. lines 22, 21, from bottom. The date of publication of 'The Vision of Sir Launfal' should be 1848, of 'Conversations on some of the Old Poets,' 1845.

Page 196, col. iii., line 28. For "September" read "August."

Page 200, col. iii., line 7. For "Celtic" read "Welsh." Line 8, For "Alinkvest" read "Almkvest."

Page 207, col. iii., line 28 from bottom. For "Franco-Austrian" read "Franco-Russian."

Page 210, col. i., line 34. For "5 per cent." read "5 per cent."

Page 334, col. iii., lines 12 and 59. For "Edmund" read "Edward." Line 14, for "September 4" read "August 28."

Page 357, col. i., line 29. For "wished-for" read "wished."

Page 425, col. iii., line 27 from bottom. For "Ulster" read "Elster."

Page 431, col. ii., line 15 from bottom. For "1893" read "1794."

Page 443, col. iii., line 24. For "Schmolka" read "Smolka."

Page 485, col. iii., last line, and 486, col. i., lines 22, 47, for "Van Angeli" read "Von Angeli."

Page 494, col. i., line 16. For "Leichtenberg" read "Lichtenberg."

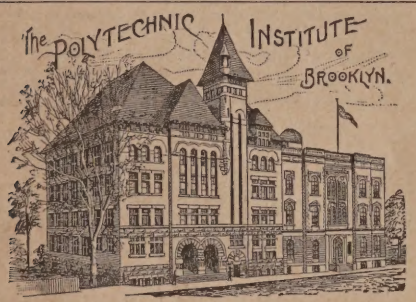
23 Union Square, New York.

THE NEW AMERICAN TEACHERS' Agency supplies all grades of Teachers and Educators. Location near the centre of population of the U. S. Apply to C. B. RUGGLES, Manager, Room C, Palace Hotel Building, Cincinnati, O.

AMERICAN AND FOREIGN Professors, tutors, governesses, teachers, etc., supplied to Colleges, schools, and families. MIRIAM COYRIERE, 150 5th Av., cor. 20th St., N. Y.

SCHERMERHORN'S TEACHERS' Agency. Oldest and best known in U. S. Established 1855. 3 East 14th St., N. Y.

FRENCH TEACHERS and STUDENTS should send for free sample copy of "LE FRANCAIS" (*French Monthly*), Published by BERLITZ & Co., Madison Square, N. Y.



Polytechnic Institute of Brooklyn.

Institute Courses in Arts, Chemistry, Civil and Electrical Engineering, for the Degrees of Bachelor of Arts, Bachelor of Science, Civil Engineer, and Electrical Engineer.

Academic Department preparatory for the Institute, for other Colleges, or for Mereantile career. Gymnasium, swimming-baths, etc. Completely equipped. Fall Term begins Sept. 16, 1891. For Catalogue address DAVID H. COCHRAN, Ph.D., LL.D., President, Brooklyn, N. Y.

WELLS COLLEGE FOR WOMEN, AURORA, N. Y.

Three Full Courses of Study. Location beautiful and healthful. A refined Christian Home. New Building with Modern Improvements. Session begins September 16, 1891. Send for Catalogue.
E. S. FRISBEE, D.D., President.

Lake Erie Seminary, *Painesville, O.* —Buildings enlarged; increased opportunities for the liberal and thorough education of young women.
Thirty-third year begins September 16, 1891.
MISS MARY EVANS, PRINCIPAL.

RIVERVIEW ACADEMY, POUGHKEEPSIE, N. Y.

56TH YEAR. Prepares thoroughly for College, the Government, Academies, and Business. Military Organization. BISBEE & AMEN, Principals.

THE BOSTON SCHOOL OF ORATORY. —The Leading School of Expression in America. First to teach the System of Delsarte. Send for catalogue to MOSES TRUE BROWN, M. A., Boston, Mass.

Exhaustion.

HORSFORD'S ACID PHOSPHATE.

The phosphates of the system are consumed with every effort, and exhaustion usually indicates a lack of supply. The Acid Phosphate supplies the phosphates, thereby relieving exhaustion and increasing the capacity for labor. Pleasant to the taste.

Dr. A. N. KROUT, Van Wert, O., says: "Decidedly beneficial in nervous exhaustion."

Dr. S. T. NEWMAN, St. Louis, Mo., says:

"A remedy of great service in many forms of exhaustion."

Descriptive pamphlet free.

Rumford Chemical Works, Providence, R. I.

Beware of Substitutes and Imitations.

CAUTION: Be sure the word "Horsford's" is printed on the label. All others are spurious. Never sold in bulk.

DENVER

STANDS AT THE HEAD, and is to-day the most prosperous city in the West. Investors in Denver realty cannot fail to realize handsome profits, and they will have the benefit of my knowledge of values gained by fifteen years' residence and five years' active real-estate business.

Can place your money at 8 PER CENT. net semi-annual interest, first mortgage on improved inside property only. HIGHEST REFERENCES.

AND HUDSON RIVER INSTITUTE
for Young Men and Women, will open its 38th year Sept. 14th. For catalogues, address
REV. A. H. FLACK, A.M., Prest., Claverack, N. Y.

J. B. Lippincott Co.'s

NEW BOOKS.

Chambers's Encyclopædia,

VOLUME VII.

Revised and Rewritten. New Type, New Illustrations, New Subjects, New Maps. Complete in 10 vols. Price per vol., cloth, $3.00; cloth, uncut, $3.00; sheep, $4.00; half morocco, $4.50.

An unusual number of subjects of interest to Americans are incorporated in this new volume, which extends from Maltebrun to Pearson. Geographically there are exhaustive papers on and excellent maps of Massachusetts, Michigan, Minnesota, Montana, Mississippi, Missouri, Nebraska, Nevada, New Orleans, New Mexico, New York, North Carolina, Ohio, and Oregon. No less full are the articles on the Mormons and the Negroes. In the excellent sketch of the late Cardinal Newman, written by Mr. Hutton, one sees how thorough and timely the work has been made. In its new edition it is incomparably the best for the people, for it is the most compact, convenient, and reasonable in price.

Tables for the Determination of Minerals

By Physical Properties ascertainable with the aid of a few field instruments. Based on the system of Professor Dr. Albin Weisbach. By PERSIFOR FRAZER. *Third Edition, entirely rewritten.* 12mo, roan, $2.00.

The Chemical Analysis of Iron.

A Complete Account of all the Best-Known Methods for the Analysis of Iron, Steel, Pig-Iron, Iron Ore, Limestone, Slag, Clay, Sand, Coal, Coke, Furnace, and Producer Gases. By ANDREW ALEXANDER BLAIR, Chief Chemist United States Board, Appointed to Test Iron, Steel, and other Metals, 1875; Chief Chemist United States Geological Survey and Tenth Census, 1880, etc. Octavo. Handsomely Illustrated by 120 Outline Engravings on Wood. 314 pp. Half morocco, $4.00.

The Old Navy and the New

By REAR-ADMIRAL DANIEL AMMEN, U. S. N., author of 'The Atlantic Coast during the Civil War.' With an Appendix of Personal Letters from General Grant. 8vo, cloth, $3.00.

Historic Note-Book.

By the REV. E. COBHAM BREWER, LL.D., Trinity College, Cambridge, author of 'The Reader's Hand-Book,' 'Dictionary of Phrase and Fable,' etc. 1 volume, 12mo, half morocco, $3.50.

RECENT FICTION.

Captain Blake.

A New Military Story by Capt. CHARLES KING, U. S. A. With Illustrations, 12mo, cloth, $1.25.

The New York *Tribune* says: "Capt. King's novels hold high and solitary rank in American fiction. He is alone in vivid and stirring pictures of our army life on the frontier—alone, it might almost be said, in the delineation of a romantic love and of men of knightly valor and stainless honor."

OTHER STORIES BY CAPT. KING.

THE COLONEL'S DAUGHTER. With Illustrations, $1.25.
MARION'S FAITH. With Illustrations. $1.25.
STARLIGHT RANCH, and Other Stories. $1.00.
KITTY'S CONQUEST. $1.00.
LARAMIE; OR, THE QUEEN OF BEDLAM. $1.00.
THE DESERTER, and FROM THE RANKS. $1.00.
TWO SOLDIERS, and DUNRAVEN RANCH. $1.00.

Mary St. John.

By ROSA NOUCHETTE CAREY, author of 'Esther,' 'Aunt Diana,' etc. The latest issue in *Lippincott's Series of Select Novels.* 12mo, paper, 50 cents; cloth, 75 cents.

"For any one who loves the exceedingly sweet in fiction, Miss Carey's new story will furnish a decided treat."—*London Athenæum.*

The Nation.

NEW YORK, THURSDAY, JULY 2, 1891.

The Week.

BARDSLEY, the embezzling City Treasurer of Philadelphia, made his promised confession on Wednesday week, but it threw little light on the Keystone Bank mystery. In fact, it was not a confession at all, but an attempt at justification, and ended in a curious appeal for public sympathy on the ground that, after twenty-five years of public service, he found himself penniless and disgraced and his family thrown destitute upon the charities of the world. He was overcome with emotion as he made this appeal, seeming to forget that he had shown only a few minutes before, by the elaborate account of his conduct in office, that for many years he had been deliberately and continuously violating his public trust, using the public money for his personal gain, speculating with it as if it were his own, and ending his career by confessing that he had embezzled vast sums of public money, standing at the bar a defaulter awaiting sentence of imprisonment. The important part of his testimony is that in which he seems to prove that the $925,000 of State funds represented by due bills which he said he had deposited in the Keystone Bank, but of which there are no entries on the books of the bank, were actually put by him into the bank or into the hands of its President. What became of the money after it was put into the hands of the President remains to be shown. In other words, the mystery of what became of the vast sums of city and State money, something over $2,000,000, which went into the Keystone Bank while Lucas and Marsh were its presidents, is as far from solution as ever.

Monday's revelations concerning Mr. Wanamaker's Keystone stock were the most serious for him that have yet been made. Howard Spencer Jones, Mr. Wanamaker's secretary, in whose name two certificates for 425 shares of fraudulent Keystone stock were issued, the first handed by Lucas to Wanamaker for use in raising funds for their joint Reading speculation, testified that he had been asked by Mr. Wanamaker to sign transfers of the stock, but that he did not know that the stock had been issued in his name. He testified also that W. Rankin, whose name appears on five of the certificates for 1,000 shares of genuine stock issued to John Wanamaker, was an office-boy in Wanamaker's employ. Two bank presidents testified that they had made loans on some of the Keystone stock which had been issued to Wanamaker, thus showing that they regarded him as a stockholder. One of them said he had made three temporary loans of $40,000 to Marsh, the fugitive President of the Keystone Bank, to help the bank over night, on collaterals furnished by Marsh, who said the money was for Mr. Wanamaker, and that he had subsequently made loans direct to Mr. Wanamaker on the same collaterals. It also appeared, from the testimony of one of the presidents, that H. H. Yard, who is under two indictments for conspiracy with Bardsley for unlawful use of the public funds, had one of the Wanamaker certificates of Keystone stock at one time and used it as collateral upon which to raise money.

The position in which the investigation of the Keystone Bank affairs is placing the Administration is a very embarrassing one, and doubtless the President perceives it clearly. Even if the Postmaster-General has not been convicted of a guilty knowledge of the condition of the bank before its failure, enough has been proved against him to make it certain that the new House of Representatives will enter on an inquiry into the nature of his connection with the bank, with all the joy which the hunter feels on a fine morning at learning that the game is afoot. For this display of unseemly curiosity some preparation must be made, and what should it be? What can it be that does not involve some sort of annoyance or inconvenience for good Mr. Wanamaker? To part with him would doubtless be hard, but it would be one of the sorrows which Gen. Harrison must have foreseen as possible when he gave a place in the Cabinet to an obscure storekeeper, unknown in politics, as a reward for raising campaign money for Mr. Quay. The presumptions have all run against Wanamaker's honesty from the day it was known that he had been Quay's right-hand man in collecting election funds. For, that Wanamaker knew what kind of man Quay was, and knew what those Quay "secrets" were before which Republicans were "to stand dumb," is just as certain as that Wanamaker is a member of the Cabinet. Quay sold him his seat in the Cabinet with the President's sanction and connivance, and it is strictly in accordance with the moral order of the world that such a transaction should eventually bring disgrace on all concerned. Wanamaker has tried to break the force of the presumption against him by maintaining a Sunday-school, but the public is too familiar now with these *refugia peccatorum* to make such devices of any use.

When Bardsley resigned the office of City Treasurer of Philadelphia, the local officers were quick to assert their right to fill the place with a man of their choice. But Gov. Pattison held that the right to make the appointment lay with him, and he named a successor to Bardsley, and the courts sustained the appointment. As a matter of course, the Treasurer chosen by the Governor was selected for his fitness to bring order out of the existing chaos, to uncover his predecessor's thefts, and to manage the city's finances with an eye solely to the public interest. Now the thing which might have been anticipated has happened. We learn from the Philadelphia *Press* that Treasurer Wright has mortally offended the local Democratic "bosses" by selecting his assistants without consulting them. He has made his selections from the ranks of ex-Custom-house clerks and heads of bureaus who lost their places when a new Collector went into office. It is even asserted that one of the most important places under Treasurer Wright is filled by a man who is a resident of New Jersey, and whose only qualification is the good reputation he made in the Custom-house during President Cleveland's Administration. For all, this the taxpayers of Philadelphia have reason to be profoundly thankful. Although that city is Republican, it contains, of course, a good many Democrats, and, equally of course, Democratic "bosses." What kind of men these "bosses" are was demonstrated at last fall's election. Quay depended largely on them to elect his candidate for Governor, and, so well did they carry out their bargain with him, that large blocks of Democratic votes were cast for Delamater in Philadelphia, and on this account it was believed in that city early in the evening of election day, before the country returns began to come in, that Quay had secured his vindication. If the city treasury, at this juncture, had been placed at the disposal of these treacherous politicians, Quay would have had his say in the matter as absolutely as if he had named the Treasurer himself. The value of these "bosses'" friendship was so well tested last November that the Governor can now afford to laugh at their displeasure.

The peaceful and quiet way the Bering Sea quarrel is hastening to a conclusion is very creditable to both nations. With Mr. Fish, or Mr. Frelinghuysen, or Mr. Bayard, or Mr. Evarts in the State Department, this conclusion would undoubtedly have been reached two years ago, and we should have been saved much humiliation. Mr. Blaine's rumpus in this matter has had to be dropped by President Harrison, just as his Nicaraguan rumpus and his Peruvian rumpus had to be dropped by President Arthur. The "bonos mores," and the 100-mile limit, and the Russian rights, and the ocean game laws, have all been stowed away in our diplomatic garret, to be smiled over by future generations. How it was that President Harrison did not feel called on to interfere sooner, it is difficult to see. The common sense which has put an end to the rumpus now surely had a lodgment in the Presidential brain two years ago. We trust he will now apply some of it to the Chilian business. It will never do to let "Pat" Egan commit us to the support or countenance of the worst attack on republican government

yet made on this continent. We can, by a very little display of sympathy, hasten the restoration of the normal working of constitutional government in that country. Balmaceda's "Congress" has just authorized him to make a determined onslaught on private property, by levying $12,000,000 on such rich men as he can get hold of within his jurisdiction, which looks as if he were getting near the end of his tether.

The threatened chaos in Connecticut, owing to the failure of the discordant Legislature to vote the supplies, seems to have been avoided in a way which has some novel, not to say serious, bearings on the subject of constitutional government. When the crisis was seen approaching some weeks ago, Comptroller Staub asked the legal opinion of Mr. William Hamersley of Hartford, a prominent lawyer of the State, who has acted as Democratic counsel through the legislative broil. That opinion has just been given *in extenso*, with the concurrence of ex-Judge Loomis, a Republican who lately retired, under the limitation of age, from the bench of the State Supreme Court. Both gentlemen, after laying much stress on the exceptional gravity of the situation, hold that the specific appropriation acts, while exceedingly strong in language and prohibitory in form, nevertheless do not apply if the regular appropriations have not been voted; and that consequently the State reverts to the condition of affairs under what are known locally as the "general" appropriation acts before the specific acts were passed in 1884. The two authorities agree that "the subject is full of difficulties, and perhaps no conclusion can be reached which may fairly be said to be free from doubt," but conclude, on the whole, that the Comptroller can go ahead paying what he considers "necessary" State expenses, as to which, however, they admit "it may be found difficult in practice to draw the line." This opinion, which the Comptroller will undoubtedly accept, keeps the State gear in running order, saves the Senate from passing supply bills to be sent to the "usurper" Bulkeley, and, incidentally, solves the problem which has met the same "usurper" of finding funds to run the State with. But in what a strange constitutional plight does it put a New England commonwealth.

The Iowa campaign this year, which was opened by the Democratic Convention last week, will be watched with interest throughout the country. For the first time since the origin of the Republican party, the Democrats enter the canvass in possession of the Governorship, and the whole party is enthusiastic in the renomination of the incumbent. For the first time, too, they take the aggressive in opening the canvass before the Republicans, and their Convention was by far the largest and most spirited they have ever held. Iowa has always been a Republican State in national elections, but the majority in Presidential years has been steadily falling off. On State issues the Democrats have been gaining ground ever since the question of prohibition came to the front, and two years ago they elected their candidate for Governor on that issue. This year they push it again to the front, declaring for the repeal of the prohibitory law and the substitution of "a carefully guarded license-tax law," with a minimum impost of $500, which may be increased by the municipality. As the coming election is for the choice of a Governor, other State officers, and a Legislature, and as the liquor question is the chief issue in State affairs, it ought to control the result. If such proves to be the case, the Democrats will carry the State, for there can be no doubt that a majority of the voters are opposed to the continuance of the prohibition policy. It was carried by less than 30,000 majority nine years ago, and has been losing strength ever since.

One feature of the mortgage business in such States as Kansas is not generally understood in the East. This is the fact that many mortgages have been contracted by men who only "squatted" upon the land long enough to get a loan, and then left to repeat the same process elsewhere. The Topeka *Capital* goes so far as to "venture the statement that there have not been 500 foreclosures against industrious farmers in Kansas in the last three years." The other day a number of foreclosures occurred in Cowley County, and it was shown that in not a single case was a farmer actually evicted thereby. Men had borrowed with the deliberate intention of abandoning the land. Of the sixty-eight farm mortgages released of record in Labette County in May last, the Register of Deeds states that not one was released by reason of foreclosure. There were forty-one foreclosures in Cloud County from January 1 to June 18, and these foreclosures, with scarcely an exception, and with actually no exception, the *Capital* believes, in the case of farms, were on farms and lots abandoned by the borrowers, who, having obtained all the land was worth, made no effort to pay the mortgages. In western Kansas the *Capital* declares that "in 99 per cent. of the foreclosures the land was abandoned directly after the loan was made, the borrower sought pastures new, and the loaner 'held the bag.'" The Topeka newspaper thinks that "great injury has been inflicted upon Kansas by such financiering, in which 'Wall Street' has been taken in by adventurers"; and, in view of such facts, it very properly holds that "the less said by the calamity organs about plutocrats who evict the downtrodden farmers of Kansas from their homes, the better for the State."

The city of Atlanta, Ga., has had an interesting experience with the liquor question. For some time there were lively contests over the question of prohibiting the traffic by law. Finally the majority of the people decided in favor of license, but under certain restrictions. No saloon can be maintained or opened on a residence-street, or in any locality outside the business portion of the city, which confines them to a narrow space in the centre of town, where they are under the strict surveillance of the police, thus minimizing all the possibilities of drunkenness and disorder. The saloons are open to public view, with no blinds, screens, or curtains. They pay a high license. They are compelled to close at ten o'clock at night. An attempt has recently been made to break over the rule as to residence sections by allowing beer saloons outside of the business limits, but the Mayor vetoed the proposition and the City Council, which had hastily endorsed it, has by a decided majority sustained him. The *Constitution* hopes that this will settle the matter for a long time to come.

There seems no longer any doubt that St. Paul and Minneapolis are to be practically united at no distant day. The street-railway systems of the two cities are in process of consolidation, and the St. Paul *Pioneer Press* declares that this "very clearly foreshadows the practical union of the two cities, the blending of their people together in a common business and social life." The St. Paul journal says truly that there never was any basis for ill feeling between the two cities except the accident of their physical separation, and consequently their physical conjunction will necessarily be their social and business union. Whether they are united under one city government or not it considers of little consequence, though it would seem inevitable. The rivalry between St. Paul and Minneapolis, humorous as its manifestations often were, has been growing rather tiresome and discreditable of late years, and the whole country will be glad to see them living harmoniously together as the metropolis of Minnesota.

The acquittal of the Directors of the New Haven Railroad on the indictment found some time ago, for allowing the cars to be heated by stoves, was doubtless what every one expected. To fix personal responsibility on them, in such a way as to convince a jury that they were morally, as well as legally, guilty of a misdemeanor, was a hopeless enterprise from the beginning. The result is, of course, a defeat for the District Attorney which has some mortification in it. But before censuring him for the attempt, it would be as well to ask what would have been said if he had not tried to put the law in motion. There is hardly a doubt that three-fourths of the press would have insinuated or alleged that there was no law for millionaires, and that this was a fair illustration of the way in which the public prosecutor crouched before capital. The trial has, however, brought out some defects in the law which should be remedied next winter. The statute should designate some officer or officers of a railroad as personally responsible for a failure of the corporation to obey the law. This would make him or

them keep a pretty sharp eye on the statute-book, but it must be admitted that there might be plenty of abuse in it. There is or was a statute of North Carolina which provided for the imprisonment without bail of the president of a railroad whenever a cow was killed on the track.

The erection of a statue to Henry Ward Beecher in Brooklyn is one of the fittest things the Brooklyn people have ever done. He was the greatest man the city has produced. It was from Brooklyn that his fame spread over the whole country, and in truth it was largely through his fame that Brooklyn became first known to the civilized world. He was, too, by far the most prominent orator of the civil war. No man's tongue did so much to support the operations of the army in the field, and no oratory of that struggle will probably live so long in men's memories. Even his clerical career was largely public property. His sermons were addressed to the whole nation rather than to his own congregation, and they were the first widely and eagerly read sermons issuing from a nominally orthodox pulpit which had little or no theology in them. What his creed was has, we believe, never been distinctly discovered, nor was any denomination ever able to make out a clear title to him. In short, no more remarkable figure has made his appearance in American religion or politics within the present century. The troubles which clouded the latter years of his life—and for which, in any view of the result, he must be held largely responsible—grew out of his qualities. He had the oratorical temperament in a degree rarely seen, and the oratorical temperament is never remarkable for judgment, or discretion, or moderation. But, unfortunate as these troubles were for his name, no community which had witnessed and profited by the lifelong labors and triumphs of such a man could let them cloud the memory of his best days, for these days were long and carried him very nearly to the end of his career.

Amherst College is just completing the thirtieth year of physical culture under the charge of Dr. Edward Hitchcock, who instituted the system of regular exercise as a part of the curriculum in 1861. The classes have thirty minutes' drill in marching and the use of dumb-bells four days in the week, and interest is stimulated not only by an accompaniment of lively music, but also by an annual prize to the class doing the best work, which was won this year by the Juniors. Careful records have been kept from the first, and they show that the regular exercise produces a perceptible improvement in health during the college course, the percentage of sickness among the Seniors during the last twenty-five years having been almost one-fourth less than among the Freshmen. Another interesting thing brought out by these statistics is the fact that students as a class are more vigorous young men now than a quarter of a century ago. From 1861 to 1865 each student lost an average of 2.18 days during the college year on account of sickness, while from 1885 to 1889 the average was only 1.75 days—one-fifth less.

An interesting study has been made at Amherst of the effects of smoking upon the members of the graduating class. In this class 71 per cent. have increased in their physical measurements and tests during the four years, while 29 per cent. have remained stationary or fallen off. Separating the smokers from the non-smokers, it appears that those who do not use tobacco have gained 24 per cent. in weight more than the smokers, 37 per cent. more in height, and 42 per cent. more in chest-girth, while in lung capacity there is a difference of 8.36 cubic inches in favor of the non-smokers. These figures show the same tendency as those compiled by Dr. J. W. Seaver, the instructor in athletics at Yale, who found that the non-users of tobacco among the Seniors show a gain over the users of 20 per cent. in height, 25 per cent. in weight, and 66 per cent. in lung capacity. Dr. Seaver has kept statistics of this sort for eight years, and finds that they show an equally decided advantage for the non-smokers during the whole period. He notes the interesting fact that not only do all the candidates for the crews abstain from tobacco, but that only one man smokes among all the prominent athletes in the different fields of activity. This is a highly significant, though seldom considered, tendency of the passion for college athletics.

Parnell's reported expectation that his marriage with Mrs. O'Shea will qualify him to resume his leadership of the Irish party without opposition, is, if he really entertains it, another sign of his want of mental balance. If his relations with Mrs. O'Shea had been the only cause for his deposition, his marriage might possibly have enabled him to resume his old place; but, unfortunately for him, during the late row he produced an entirely new plan of action for the Irish party, in which all alliance with the English Liberals was repudiated, and home rule was to be won simply by denouncing the English connection in strong language. The number of the Irish politicians who would enter heartily into a movement of this sort must now be very small, even if it were started by a leader of unstained repute. But even if the whole party accepted it, it would soon cease to produce much effect or even excite much attention. Interest in Irish affairs has greatly declined in England, and although the Liberals hold on to home rule as part of their platform, if Mr. Gladstone were to disappear before the next election it would probably not occupy a very prominent place in the contest. Nor, if they won, would Mr. Gladstone's successor be very eager to draft a home-rule bill and face the responsibility of carrying it through Parliament. In fact, there is nothing which the Irish party needs so much from Mr. Parnell just now as "silence, and very little of that," as the Irish policeman remarked. His power as a leader is gone, and if he lags on the stage, it must be as a mere agitator.

Servia, having temporarily solved her internal difficulties by the expulsion of ex-Queen Natalie, is now engaging the attention of European diplomacy by a Utopian attempt at establishing a Balkan confederation. M. Tricoupis, the former Greek Premier and present leader of the Opposition party, who recently visited Belgrade and was most cordially received by the Regents, has declared that the time has come for Greece and Servia to make common cause in Macedonia as against Bulgaria; Gen. Ignatieff has followed M. Tricoupis in his pilgrimage to Belgrade, and Prince Nicholas of Montenegro will also be in the Servian capital before long. Of these three visits, that of Ignatieff alone has a well-defined object. His imperial master is incensed at Bulgaria, whose ruler, Ferdinand of Coburg, relying on Austria's approval, dares to defy Russia, and he also looks with disfavor on Rumania, whose king is amenable to German influences. Hence Ignatieff's departure for Belgrade in his old rôle as chief apostle of Panslavism—as understood in St. Petersburg and Moscow—that is to say, of the spread of Russian power by whatever means. He pursues to-day, as President of the Slavic Charity Committee, the same policy which nearly twenty-five years ago procured for him, while Russian Ambassador at Constantinople, the sobriquet of "Menteur Pasha." This time he is to unite Servia, Montenegro, and Greece in a Balkan Confederation against Bulgaria and Rumania, and he finds a convenient support in the restless ambition of Tricoupis. As for Nicholas of Montenegro, he has had his eye on the throne of Servia ever since he married his daughter to the Pretender Kara-Georgevitch, and although his daughter is dead, his interest in the Servian succession survives, and he is said to be more than willing to reserve his second daughter for the youthful King Alexander.

While Servians and Montenegrins may join hands, at the behest of Russia, in opposing Bulgaria, they will meet with scant sympathy on the part of their fellow-Slavs. The Bosnians are content with the rule of Austria after the yoke of Turkey, and Croats and Slavonians, Slovacks, Ruthenians, and Rascians have learned to bear with Magyar chauvinism. Of all the Slavic populations of Austria which, sixty years ago, listened with patriotic fervor to the voice of Kollar, who so eloquently advocated the literary and political union of all Slavs, only a portion of the Czechs still look to Russia as the legitimate representative of the national cause. The Poles of Galicia are to-day the principal allies of the Liberal Germans in their struggle with Czech insolence, and the Poles of Russia, some of whose leaders after 1830 were willing to forget Russian barbarities and to join in the general cry for Slavic union, have all outlived their magnanimity and their Panslavist dreams.

MR. WANAMAKER'S KEYSTONE STOCK.

In the carefully prepared statement which he read before the Investigating Committee on June 8, Mr. Wanamaker said concerning his Keystone Bank stock:

"I have been a depositor only; never was an incorporator, officer, or director. I never owned a share of the stock. I held until recently twenty-five hundred and sixteen (2,516) shares as collateral, as hereinafter stated."

"Upon several occasions when I notified Mr. Lucas that under our agreement [for a joint speculation in Reading stock] money was needed, he brought me stock of the Keystone Bank, which he requested me to use in lieu of the money, as it was not convenient for him to furnish cash at the time. As a result, when he died I had in my possession 2,516 shares of the Keystone Bank, so received by me from him."

"I held this bank-stock subject to an adjustment of the account, and Mr. Marsh and Mrs. Lucas called on me in relation to it, but no settlement was made, though the former was very urgent. No intimation was ever given that the stock was irregularly issued until Mr. Marsh, shortly after the run on the bank in December last, called it in question and desired to have the stock returned to the bank. This I declined to do, first, because I had not obtained it from the bank, but from John C. Lucas individually as his private property; secondly, because I did not believe the stock in my possession was overissued, and no proofs were ever offered that such was the case; and thirdly, because I was by no means certain that if the stock was overissued, as alleged, my title against the bank would be in any way affected."

On his cross-examination, Mr. Wanamaker was asked when he received this stock from Lucas, and replied: "I received it from Lucas a long time previous to his death, at different times. Perhaps he would bring me 200 shares. He would say when I wanted to buy a thousand shares of stock, he would bring it. *I kept it in my pocket-book.*" And again, when asked if he was ever a stockholder: "Never. I had no business to have this stock had Mr. Lucas kept his agreement. He should have given me money, but he did not."

The Receiver of the Keystone Bank, Mr. Yard, took the witness-stand on June 24, and gave the story which the books of the bank tell about Mr. Wanamaker's connection with its stock. It is in conflict in many important respects with that of Mr. Wanamaker cited above. In the first place, the books show that he had held, in addition to the 2,516 shares of fraudulent stock handed to him by Lucas as collateral, certificates for 2,625 shares which had been issued to him directly. All the latter certificates were anterior to the Reading speculation of 1887, their dates running from March 3, 1886, to May 31, 1887.

In the second place, it appears from the books that only one of the 17 certificates for the 2,516 shares of fraudulent stock was issued to Lucas. This was dated January 19, 1882, more than five years anterior to the Reading speculation, and was for 200 shares of stock. The next one was also for 200 shares, was dated July 5, 1887, about the time of the speculation, but was not issued to Lucas, but to Howard Spencer Jones. Another one on the same date for 225 was also issued to Jones. Then on July 6 came two certificates, one for 241 shares and another for 200 shares, issued to Edward Irwin. Howard Spencer Jones was Mr. Wanamaker's secretary, and Edward Irwin, we are informed, was an assistant in and afterwards the head of Mr. Wanamaker's credit department. How did it happen, if this was Lucas's stock, and he was giving it to Wanamaker as collateral for a loan to be used in a joint private speculation, that it was not issued in Lucas's name?

In the third place, only the certificates enumerated above as having been issued to Lucas, Jones, and Irwin, for an aggregate of 1,066 out of the total of 2,516 fraudulent shares, bear dates anterior to Lucas's death on August 18, 1888. Wanamaker said on his cross-examination, as quoted by us above, that he received the stock a "long time previous" to Lucas's death, yet the books show that between June 29, 1889, and December 3, 1890, no less than twelve certificates, for an aggregate of 1,150 shares, were issued to persons more or less intimately connected with Wanamaker in a business way, either as clerks in his own employ or that of his brokers. Some of these clerks, when put on the stand, profess almost entire ignorance of the transaction.

In the fourth place, it is shown by the testimony of his brokers that instead of keeping this stock in his pocket-book, as he said he did, Wanamaker handed it to his brokers to be used as collateral with which to raise money, and that it was used continuously for this purpose from the dates of its issue till about the last of February, 1891, or shortly before the failure of the bank. In February, Wanamaker began to gather it in, and sought to use it to obtain $100,000 or more from Mrs. Lucas on his claim against Lucas's estate.

In the fifth place, it is shown by the testimony of Wanamaker's brokers that he did, in one instance at least, sign a power of attorney on a certificate for 625 shares of the 2,625 of the regular issue which he held prior to the Reading speculation, thus giving evidence that he was a stockholder of record and could transfer the stock. Yet he declared solemnly in his written statement, "I have been a depositor only. I never owned a share of the stock."

In a statement which he has since given out for publication in Washington, Mr. Wanamaker declares again that he "never owned a share of Keystone stock by purchase or gift"; that if the books of the bank were properly kept, they will show that he was never recorded as a stockholder, but that "it is possible if a bank could over-issue stock, it could do queer things in bookkeeping"; that in his testimony before the Committee he confined himself to the stock held by him in the Reading operation, which was the only stock he had interest in, and then only as collateral, and that the facts remain as he stated them. This does not cover all the points raised by the Receiver's revelations, or, in fact, meet the most serious of them at all, as will be apparent to any one who reads the full text of the Receiver's testimony.

There is nothing for Mr. Wanamaker to do but to take the stand and offer himself for fresh examination. He has admitted that when he denied that he had sought to delay the appointment of a receiver of the bank, he forgot that he had sent two telegrams to the Comptroller advising delay, and he seems to have forgotten entirely, when he prepared his written statement for the Committee, that he had once been the holder of 2,625 shares of Keystone stock which he had used precisely as a stockholder would have used it. He forgot, also, that he did not keep the Lucas stock in his pocket-book, but used it as collateral for raising money. His memory must now be refreshed on these points, and his testimony will be of greater interest in consequence. He ought to have a chance to explain also how it happened that there was so much subterfuge resorted to by Lucas in issuing that fraudulent stock, and how it happened that he hit upon so many of Wanamaker's business employees as suitable persons for dummies in the bogus transaction. A public moralist ought to be very careful about the strict accuracy of his statements, and to avoid even the appearance of evil in his most intimate business transactions.

"THE FUNDAMENTAL FALLACY"

The continued revelations concerning the affairs of the Keystone Bank of Philadelphia, coupled with the complete betrayal of the public by the local press of both parties, has at last impelled a large body of conscientious Republicans to print an address which appeared on Tuesday. They examine Quay's record and his "elaborate defence in the Senate," applying to it the test which dissolves it in thin air—namely, his failure to call the only witnesses competent to refute or confirm the charge, that he robbed the State Treasury, Messrs. Cameron and Wayne MacVeagh. This failure converted his vindication in the Senate into so much twaddle, to which neither his colleagues, nor the public, nor his accusers paid any attention. The address touches also on the treatment of the Ballot Reform Act by the Legislature, under Quay's direction, and finally reaches "the recent robbery of the city and State Treasury by its dishonest guardian." On this the signers say:

"Not only must the citizens of Philadelphia suffer a tarnished name, a direct loss of a million dollars or upwards, while thousands of depositors lose their earnings through the failure of banks connected with the defalcation, but those untold and untraceable losses resulting from the shaken confidence in the community must also ensue.

"There is a fundamental fallacy in the theory of politics which has for years obtained in this State, and of which Mr. Quay has been the leading exponent. It is that public offices are spoils, the lawful property of the politicians who capture them and by whom they are dispensed in turn to their underlings as the prizes of war. But the truth is that these offices are a public trust, which should be held in stewardship by the politicians for the people.

"The disaster of a looted Treasury is explained by the fact that the step from this fallacy to the startling and bold appropriation of public funds to the private uses of public offices is a long one in appearance only, not in reality. That step has now been taken."

There then follows a solemn and emphatic appeal to the public conscience of the State, which certainly loses nothing from being

made in language of studied dignity and sobriety. The document is signed by a large body of Republicans who are prominent in the business and professional world, including twenty-two clergymen, which shows that the example of courage set by the Independents in the late canvass has not been thrown away.

There is hardly an expression in it we should wish to alter except one, and that is the reference to "the fundamental fallacy" of Quay's theory of politics. That fallacy is, that "public offices are the lawful property of the politicians who capture them." It is true that "the step from this fallacy to the startling and bold appropriation of the public funds to the private uses of public offices is a long one in appearance only, not in reality." It is also true that "this step has now been taken" in Pennsylvania with a vengeance.

But the fallacy is not really the "fundamental" one, as far as that State is concerned, of the Quay theory of politics. The fundamental fallacy is that the tariff, such as it is at any given period, must be defended at any cost and against all comers. It is this fallacy which not only maintains Quay in power, but has produced Quay and all his followers. It is this which has debauched and silenced the press, and has deadened the public conscience of the State during the past twenty years. Quay and Quayism are not novelties. They have been steadily growing under the public eye for fifteen years. Quay's character and methods were as well known in 1885 to all Pennsylvania politicians and to a large body of business men in Philadelphia as they are to-day. How have they been defended and covered up both by his henchmen and by the party generally? Simply and solely by denouncing those who sought to expose them as enemies of the tariff, and representing the exposure as an attempt of "British free-traders" to ruin American industry. This has been the strong tower of defence, the *tutissimum refugium*, of the whole gang who have been concerned in the looting of the Keystone Bank and of the Treasury. This was their answer to every warning or remonstrance touching their operations, no matter from what quarter it came, and Pennsylvania politics cannot be permanently purified until there is a general recognition of its absurdity.

There is, however, another fallacy which lies lower still, to which the roots of Quayism run down, and from which it draws a large part of its sap and vitality. To mention it in Pennsylvania is, however, to discredit one's authority on all subjects as effectively as the authority of a philosopher would have been discredited in the Middle Ages by a denial of the existence of witches. But the truth must be spoken, nevertheless, even if here and there, and now and then, it produces a little nausea. This particular truth, too, is not so much an economic as a political truth. It affirms nothing as to the value of a tariff in building up industries or accumulating wealth. There is nothing in it inconsistent with the Pennsylvania industrial gospel. What it affirms is simply that you cannot, in a country of universal suffrage, have pure politics as long as prices are raised and lowered by legislation at every session of the Legislature. This system would eventually corrupt a community of angels. As long as the business man looks to Congress to provide a good market for his goods, he will inevitably invest money in the high-tariff party, just as he would invest in a mill or in a coal mine, and he will give the money to the man who, he thinks, will put it where "it will do most good." That man will always be a Quay, and nothing but a Quay. The Quay will have under him a swarm of Delamaters, Wanamakers, Bardsleys, and Marshes to do his bidding, and blow his trumpet, and defend his methods. Politics, in short, will, under such conditions, inevitably become "business" in the very lowest sense of that term. The party having won the Government by promising to enable everybody who gave money for the canvass to make a handsome profit on what they gave, the underlings who gave not money but work, will claim the salaries of the public offices as *their* reward, and they will get them. They will not listen to the "trust" doctrine from people who openly acknowledge that they themselves are in politics mainly and solely to increase their own incomes. And gradually the whole machinery of government will come to be looked on simply as the machinery of a mill is looked on, as investment of capital to be returned with interest, profit, and something for superintendence and wear and tear. Everything will be considered marketable and divisible among the stockholders—treasury funds, offices, contracts, pensions, subsidies; and the work of the Quays will be mainly the work of deciding who got in on "the ground floor" and who on upper stories.

It is from this view of the province of legislation that the first step to treasury-looting is taken. The spoils view of offices is simply the second step. The looters are always members of the new "historical school" of political economy. They all hold to the paternal theory of government, and think the State cannot do too much for all its inhabitants, and especially for those of them who keep the keys of the public safe. No high or noble view of politics can long survive the practice of annually estimating what effect your vote will have on your bank account. The great capitalist takes a little longer to succumb to it than the poor laborer whose vote he purchases, but he succumbs in the end, and hires a Quay to manage the political department of his business. The newspapers, too, speedily catch the contagion. There must be something for them in politics as well as for everybody else, and the manna reaches them most palatably in the form of "ads." For "ads" they denounce the "British free-trader"; for "ads" they certify to the honesty of all the able rogues and the truthfulness of all the useful liars, and for "ads" draw the veil of silence over the unfortunate ones who are found out. It is all "business."

If the Philadelphia reformers will look a little more deeply into the matter, they will find, we warrant, that this is a fair description of the situation. Their fallacy is not the fundamental fallacy. They have not reached the lowest depth. If they will dive down a little, they will come on what is the cancer of popular government.

THE PRECURSORS OF PEFFER.

Mr. Charles Francis Adams, soon after the Greenback craze of 1874, made in the *North American Review* a most interesting collection of opinions on currency questions uttered by various members of Congress during the debates on the Inflation Bill vetoed by President Grant. Put together in this way in brief compass, they made a comic article of extraordinary drollery, not very unlike the schoolboy answers to questions on various topics which Mark Twain published a few years ago. Nothing could surpass their amusing absurdity.

The greenback movement was virtually killed by the veto, and its oddities passed out of the public mind. But the silver movement which arose in 1876, on the discovery that silver had become cheaper than gold, and that it might be advantageous to pay outstanding debts in it if it could be made a legal tender, speedily proved fully as rich a contribution to the gayety of nations. The assertion that silver had been secretly demonetized in 1873, by a conspiracy of the gold-bugs, which was seriously put forward, even by Mr. Kelley, the Chairman of the Committee which had reported and supported the demonetization bill, was in itself a joke of huge proportions. The bill was before Congress from April, 1870, until February, 1873, during which period action of some kind was taken on it, in one house or the other, nineteen times. Its enactment was in fact one of the most public proceedings which have ever taken place in Congress. Why, then, did it not attract more attention at the time? Simply because in 1873 coinage was still considered a quasi-scientific question, to be settled by experts, and the opinion of some thirty experts was taken on the bill. Mr. Kelley, in reporting it, admitted this when he said (June 9, 1872):

> "It is impossible to retain the double standard. The values of gold and silver continually fluctuate. You cannot determine this year what will be the relative values of gold and silver next year. They were 15 to 1 a short time ago. They are 16 to 1 now."

When, three years later, silver having fallen heavily in value, it was found out that it might be made to furnish "cheap money for the poor man," and also for the farmer to pay off the rascally mortgagees who had lent him gold, there occurred the most extraordinary episode in the history of American demagogy—a history which somebody ought to write. Mr. Kelley and several members of his Committee, and a large number of the majority who passed the bill, actually took the stump to denounce its passage as a

fraud on the American people, secretly accomplished. It was intended to rob them of a beloved kind of money left them by their deceased fathers as a precious legacy, to say nothing of its having been, as Mr. Kelley pointed out in a lecture, the money of Abraham, Isaac, and Jacob, and used by the Patriarchs in the purchase of burying-lots and other real estate.

What this meant was that the currency had got into politics, and its effect on the politicians was very like the effect of the entrance of Satan on the Gadarene swine. They fell over each other in their eagerness to invent new forms of absurdity and tomfoolery about the precious metals. No place was too steep for them to rush down. Republicans of all degrees of party standing vied with each other in the concoction of puerilities about the place of their favorite metal in civilized society. They became the precursors and indeed the producers of the Simpsons and Peffers. We are all laughing over Peffer's absurdities now, but where did Peffer get them? Why, he got them from Republicans like Blaine, and Allison, and Ingalls, and Kelley, and Matthews. Mr. Matthews denounced "the blindness of the conspiracy which had sought to exalt gold as the god and king of money." The present Senator Allison made the following amusing statement, for a man pretending to be an economist:

"Who does not believe that if it [silver] is made a legal-tender, or rather if silver dollars be coined, these colored people [the negroes of the South], like the people of China and the East Indies, will hoard this money in considerable sums, so that we shall be able to go on coining at the rate of $30,000,000 per annum for many years to come without disturbing the relative value between gold and silver?" (*Globe*, vol. 136, p. 175.)

This suggestion that the negroes would save us from silver inflation and keep the two precious metals at par, by hoarding, owes its ridiculousness, as Prof. Laughlin, to whom we are indebted for the quotation, points out, in large part to the failure to explain how the negroes were to get hold of the silver when they wanted to hoard it, having little or nothing to give in exchange for the $30,000,000 a year which they were to hoard. But the assumption, absurd as it is, contains the seed of the Peffer doctrine which is now ravaging the South and West, that if plenty of silver dollars are coined, they will find their way into the farmer's pockets without his having to pay for them in goods; that is, that the owners of the silver will let people have some of the coined dollars for nothing. Mr. Allison confined his proposition evidently to colored men. It was only Chinamen, Hindus, and negroes who were to seize the silver and hoard it. But Peffer very naturally says that not "niggers" only, but white men, will take a hand in helping the free-coinage policy, by pocketing the dollars or burying them in the earth.

Mr. Blaine was very diverting on this same point. Denouncing the policy of coining the old trade-dollar of 420 grains of silver for use in the Oriental trade, while demonetizing our own old dollar of 412 grains, this statesman remarked:

"It will read strangely in history that the weightier and more valuable of these dollars is made for an ignorant class of heathen laborers in China and India, and that the lighter and less valuable is made for the intelligent and educated laboring man who is a citizen of the United States." (*Globe*, vol. 186, p. 822)

This contains the seeds of the Peffer doctrine, that money is not so much a medium of exchange as a commodity useful in itself which it is well to have in the house, like pie or a rocking-chair, and not a thing to be parted with for something else; so that the manufacture of it in any quantity, however great, is a blessing. It contains, too, the suggestion that the ignorant heathen laborer would get the big dollar for nothing, while the light small one would be bestowed, also for nothing, on our own educated and intelligent laboring men, which, of course, would be grossly unfair. In a gratuitous distribution of dollars, our own citizens ought to be preferred. Senator Ingalls, as might have been expected, contributed a mighty virile generalization to the discussion when he said:

"Gold is the money of monarchs. Kings covet it; the exchanges of nations are effected by it. Its tendency is to accumulate in vast masses in commercial centres, and to move from kingdom to kingdom so as to unsettle values and disturb the finances of the world." (*Globe*, vol. 187, p. 1052.)

But the best point of all for silver was made by the late Senator Howe, who perhaps would hardly be worth quoting but for the fact that we thought so much of him as an authority that we actually sent him as a delegate to the International Monetary Conference in Paris, to meet the foremost currency experts of Europe. See how easily he disposes of the famous "Gresham's Law":

"But we are told the cheaper metal will drive out the dearer, and gold will be banished from our circulation. Silver will not drive out anything. Silver is not aggressive; it is so much like the Apostle's description of wisdom that it is first pure, then peaceable, then gentle. . . . Put a silver and a gold dollar in the same purse and they will lie quietly together." (*Globe*, vol. 186, p. 765.)

We might fill a volume with humorous exposition of the same sort. The above are abundantly sufficient to show that if Peffer be foolish, he is not original. All these Kansas heresies which are frightening the Republican party from its propriety are the concoctions of Republican leaders when engaged in the folly of trying to keep up the price of silver in 1878, on a falling market, by imposing it as a legal tender on the American people.

THE STRIKING FEVER.

THE strike of the butchers, bakers, and grocers in Paris, without any defined object, is a good illustration of the contagiousness of the striking state of mind. Managers of railroads and some other large establishments which have great staying powers, recognized this long ago, and many or most of them, therefore, make it a cardinal rule of their business never to yield to a strike, whether it be reasonable or unreasonable, because, they say, to yield to one is to invite a series of others in rapid succession. The London Dock Companies have had a melancholy experience of the soundness of this rule from a business point of view. They yielded, under pressure from philanthropists and clergymen, to a strike got up by a body of laborers not regularly employed by them, but absolutely necessary to them now and then on pressing occasions, and agreed to pay wages which they really could not afford. This was two years ago, and they have never since had a week's peace. The laborers, having discovered, as they thought, their power over the companies, speedily broke loose from the control of the outside agitators who managed the first strike, and struck every day or two against the application of the commonest and most essential rules of order and discipline, and have come near achieving the ruin of the port of London. Things have grown quieter lately, but the loss has been enormous and the experience bitter.

In Paris there was apparently a very reasonable strike the other day of the omnibus-drivers against long hours and small pay. The companies resisted for a while, and could undoubtedly have filled the strikers' places, but they were prevented by mob violence from moving their vehicles. The police were overpowered, and the Government, under the influence of the obloquy excited by the use of the army in suppressing a strikers' riot at Fourmies a short time ago, was afraid to call out the troops to clear the streets, and the companies surrendered. What the men asked for was undoubtedly fair enough. The Parisian public has no good claim to the service of any human being on an omnibus box for fifteen hours a day, and no corporation ought to undertake to provide such service.

But unfortunately there is little likelihood that the surrender has ended the trouble. In fact, judging from American and English experience, these troubles are only beginning. The drivers will probably soon strike again, either for further shortening of their hours, or further additions to their wages, or to procure the dismissal of some obnoxious person or persons from the company's employment. In other words, the companies will probably find that the strike has sensibly diminished their control of their property. The effect on the other trades is already visible. The bakers, butchers, and grocers have all struck, not through sympathy, but contagion. The French dearly love a "manifestation"—that is, a march through the streets as an expression of some sort of discontent—and this manifestation was probably intended, like "the general strike" which used to be proposed here, to show the community its dependence on a particular class of service, and bring it to its knees before the manual laborers. The threat of the Government to put soldiers into the bakery, butchery, and grocery business to supply the places of the strikers for the moment, gives an additional touch of comedy to the crisis, and an idea of what a funny place the world will be when Labor gets "on top," as many philanthropists assure us it will before long, although they never tell us how much room exactly there is "on top" for permanent residents.

It is this inability of labor organizations, as at present managed, to bear success, that does most to prevent their usefulness to the

laboring class. When a strike succeeds, the effect either on the leaders or on the rank and file is very like the effect on many an industrious man of a lucky turn on the Stock Exchange or at a gambling-table. Drudgery and slow gains at once become intolerable to them. They cannot bear to go on obeying orders and keeping regular hours, in the old humdrum fashion. They want to make the bosses and the foremen "stand round" and mend their manners, and, if nothing else, to infuse a little excitement or variety into their own lives. We passed through this phase of "the labor problem," through which France and England are now passing, in this country five years ago. Up to 1886 the presumption always was that a strike against a corporation was reasonable, and that there was a certain justice in the stoning or clubbing of "scabs," and that strikers were entitled to as much rioting facilities in the streets as their occasions might require. But this state of things was speedily changed by the excesses of the strikers. The strikes were badly managed. They occurred so often, and were attended with so much clubbing and stoning and interruption of public traffic, that the community had in self-defence to turn the presumption against strikes, and relieve the "scabs" from their dolorous liability to have their heads broken. So it will be by and by in Europe. The social bond is too strong for any one class to break it.

There are various signs that Labor itself is waking up to the discomfort of trying to be "on top." The last report of the Michigan Board of Labor Statistics contains 1,212 answers to the question, "Has your labor organization been of any financial benefit to you?" Sixty-four per cent. said "Yes;" but thirty-five per cent. said "No." To the question, "Has your labor organization been of any other benefit to you than financially?" 1,125 answers were received. Forty-one per cent. said "Yes," but fifty-nine per cent. said "No."

A similar inquiry by the Wisconsin Labor Bureau some time ago showed the same frame of mind. A number of machinists, printers, carpenters, etc., were asked their opinion of the value of trade unions. Barely half unhesitatingly endorsed the union system, while a full quarter were outspoken against it, and the other quarter qualified their approval of the principle by saying that "they are good if properly organized and managed," or that "they are good if not carried to excess," or that "they are just what we need, provided they are carried on upon good principles." It would probably be found, on more minute inquiry, that the failure to benefit was in the great majority of the cases due to bad management.

IRISH LEGISLATION AT WESTMINSTER.

DUBLIN, June 9, 1891.

BALFOUR'S Land Bill has now been practically passed, the committee stage having been completed. It was described by John Morley as the worst land bill ever introduced into Parliament. That remark applies to the details, not to the principle of the measure, upon which a majority of both parties are in accord. It is another example of the British legislation which we resent so much.

The bill is prepared on the instructions of Balfour, a strong and determined man, but totally ignorant of Ireland, and imbued with contempt, which he takes little trouble to conceal, for the Irish. The information necessary to the construction of the measure is derived from "the Castle," *i. e.*, from Anglo-Irish officials entirely devoid of sympathy with the Irish people. In Parliament three-fourths of the members know little and care less about the measure; English members who engage in the debate do so from a party standpoint, more anxious to embarrass their adversaries than to pass a good law. The arguments of Irishmen are addressed to empty benches; the Committee, as Tim Healy remarked, are in the smoke-room, not in the House. The Irish Conservatives dare not vote against a Government measure, or any of its clauses, but, to satisfy their constituents, they occasionally abstain from voting.

I attended the debates on some of the more important clauses. Balfour and the Irish Attorney-General sat for the most part alone on the Treasury Bench. It was evidently impossible for them to accept the most reasonable amendments, urged both by argument and entreaty, by the Irish Nationalists, without having entirely to recast their bill. The few Irish Conservatives who took part in the debate said in substance, We object to these provisions, but we won't vote against the bill if you insist on them. The division bell rang, and the English majority, who had either not listened to the debate or were impervious to argument, hurried from all parts of the House to register the Chief Secretary's decisions. Irish members in vain pointed out that mistakes in English acts were easily remedied by amending measures, while it was hopeless to expect even a hearing for amending bills brought in by Irish members.

The bill provides a sum of £30,000,000 to be loaned to tenant farmers for the purchase of their landlords' estates. As guarantees against loss, grants from the imperial revenue in aid of local taxation for education and maintenance of the poor may be withheld from Ireland; the Lord Lieutenant may order special taxes to be levied; he may also require for a series of years that the borrowers shall pay an annuity on their loans in excess of the normal annuity of 4 per cent. Without reference to the capital value of a farm, or the price at which the landlord is willing to sell, every purchaser is obliged to pay for five years an annuity equal to 80 per cent. of his legal and often nominal rent. Large classes of farms are excluded from the benefits of the act, so that few landlords will be able to dispose of their entire estates.

On the whole, the bill offers less inducement than the existing law to landlords to sell or to tenants to buy. It imposes taxation on ratepayers who derive no benefit from the act; it makes these unwillingly guaranteeing ratepayers liable to pay the debts of borrowers who may under certain circumstances hold their lands without payment. It encourages tenants to borrow and buy, by providing possibilities of their escaping repayment. Though the bill is of moderate length, the multitude and complexity of the guarantees are such that some English members declared that the effort to comprehend their action and effect had almost reduced them to idiocy; and this complexity, involving a vast amount of book-keeping, will be a serious difficulty in administration. As an example of British legislation, the bill is no worse than the Liberal Land Law of 1881; that was passed in defiance of Irish opinion. Amending measures were year after year rejected by the House of Commons with contempt, and some of its most manifest defects were not corrected until 1889. Balfour's present bill furnishes another argument in favor of Irish autonomy, drawn as it is on the principle that, though the British taxpayer is to run no risk in the transaction, British members are to prescribe the terms and conditions of the purchase of Irish landlords' estates by the tenants with the Irish taxpayers' money. Under the Purchase Act that has been operating since 1885, £8,500,000 have been allotted among 20,500 farmers to enable them to buy their farms. For the last three years the rate at which landlords and tenants have agreed upon terms of sale has reached about £2,000,000 a year, and it does not seem likely that more than this amount will be required annually, as the new act is less favorable to both buyers and sellers than the former one.

Balfour's other Irish legislation during this session has consisted wholly of acts for the relief of distress. $1,000,000 were granted for the construction of light railways, and $500,000 for relief works in the shape of roads, harbors, and drainage. Loans of public money free of interest for two years were granted to the boards of poor-law guardians for the purchase of seed potatoes, the partial failure of that crop last year having caused one of the periodical scares on the subject of this precarious crop. The result of this latter measure was that the price of potatoes rose to $45 a ton for a short time, and considerable quantities were bought under the act at prices so high that, if next season is one of ordinary yield and prices, the value of the entire product will scarcely amount to that of the seed. The construction of railways which can only be worked at a loss, is a matter of very doubtful policy, even though the locality benefited pays no interest for the capital outlay. Several light railways have already been built by means of public loans at low interest, guaranteed by mortgage of the local rates, in districts of greater promise than those now being opened up; and in scarcely any instance has a railway earned sufficient to pay interest on its cost. The increased taxation in the districts liable has made these railways very unpopular, more especially as the rates are pledged by the county grand juries—non-elected and non-representative bodies. Irish business has, as usual, taken up an amount of time quite disproportionate to its importance in the Imperial Parliament, and no advance whatever has been made towards settling the Irish question.

From the preliminary report of the census, which has been brought out within two months of the enumeration, Ireland does not appear to have prospered during the last decade, so far as prosperity is indicated by population. The natural increase in the number of inhabitants, arrived at by subtracting 879,779 deaths from 1,147,432 births during the period, would have been 267,653; but the absolute decrease is 468,674. This diminution of 9.1 per cent. is double that of the period 1871-'81, when it was only 4.4 per cent., and is accounted for by the emigration of 768,105 persons. Previous inquiries have shown that two-thirds of the emigrants are persons between the ages of twenty and forty-five; and there can be no doubt that the wholesale departure of the young and vigorous leaves the remaining population with an undue proportion of infirm and aged persons. The natural increase of population is very small, and, as the two last enumerations have shown, early marriages are excessively rare, and the Irish birth-rate is abnormally

low when compared with that of England and other European countries.

No single detail of the census indicates any advance in prosperity. Dublin and Belfast, as is natural, and three smaller towns, have increased their populations; all other provincial towns show a decrease. Inhabited houses have diminished by 4.5 per cent., and uninhabited houses have increased 13 per cent. Since the enumeration in 1841, the total population of the island has diminished from eight and one-quarter millions to less than four and three-quarter millions, and still emigration is put forward every year in Parliament as the most desirable of all remedies. A continuance of the present decennial rate of diminution would leave Ireland uninhabited before the end of the next century. AN IRISHMAN.

THE CORINTH CANAL.

ATHENS, June 2, 1891.

AFTER visiting the field of Marathon and most of the celebrated ancient places and things in the vicinity of Athens, I decided to make a personal inspection of the greatest of the works of modern Greece. I was the more moved thereto since I could find nobody in Athens who had seen the Corinth Canal except from the summit of a high railway bridge which crosses it. I afterwards found one person, a lady, who had walked through it, at considerable risk of being dumped and carried off as refuse material, in manner as will be explained hereafter.

When I expressed to the *portier* of the hotel my desire to visit the Corinth Canal, he said that the most convenient railway station was Kalamoki. This is the ancient port of Schoenus, on the Saronic Gulf, and is very near the site of the old Isthmian games, traces of the Stadium and of the Sanctuary wall being still visible. The *portier* advised me to take my luncheon with me, as I should not be able to procure any there. I said that I would go to Corinth for my luncheon. He replied that I would find things worse at Corinth than at Kalamoki. This was a surprise to me, as I had expected to see a flourishing modern town with several good hotels there. In fact, there are only a few hovels and not even an inn at the place where Timoleon was born, and where Alexander the Great was invested with the command of the Greek expedition against Persia. There is nothing left of ancient Corinth but seven dilapidated Doric columns, an amphitheatre of late Roman construction, and the citadel or Acro-Corinthus.

It is two and a half hours by rail from Athens to Kalamoki. The road passes through a beautiful country so full of historic interest that one is bewildered at every turn. The first considerable station is Eleusis. I observed that the conductor in calling out the name put the accent on the first syllable. The next station of importance is Megara. Great room here for the learned, but I shall restrict myself to what I saw with my own eyes, going and returning, for the train made a considerable stop here each way. I saw the Grecian process of gathering the wheat harvest. In front of the railroad station—*i.e.*, between it and the Strait of Salamis—are the Megarean threshing-grounds, consisting of several acres. Here the labor of threshing and winnowing was going on, fifty to one hundred men and as many horses being briskly at work. The wheat was cut with the sickle, a handful at a time, mostly by women. It was then put together in bundles by men and loaded on the backs of donkeys. These carried it to the threshing grounds, where it was arranged in circles to be trodden out by the hoofs of horses, after which the straw was removed and the grain tossed in the air by means of long-handled shovels until the wind had entirely separated the chaff from the wheat. This happened to be a windy day, and the greater part of Megara was improving the occasion. The process of grinding the wheat I did not see, but that of baking was visible at every front door (outside, of course), the oven consisting of a large clay retort, first heated to the proper temperature by a fire of sticks inside. These processes, I imagine, have undergone little change since the Homeric period. The Megareans of to-day, however, are to be accounted a happy people as compared with their predecessors, since they enjoy the inestimable blessing of security. Their fields are not ravaged in wars with their sister cities as they were in the days of Thucydides and Xenophon, nor are their coasts swept by corsairs as they were in the Middle Ages. A writer who visited Megara in 1676 records that the inhabitants "stand in such great fear of the pirates that upon sight of every boat in the day-time, and but hearing their dogs bark in the night, they presently fall to packing up their few goods, which they hide as well as they can, and run away."

From Megara to Kalamoki the railway skirts the edges of a succession of cliffs overlooking the waters of the Bay of Egina. The carriage road does the same. Both together make a very good reproduction of the Cornice, but the Grecian highway is the more beautiful of the two by reason of the softness of the coloring of both land and water.

Arrived at Kalamoki station, we found one carriage in waiting for anybody who might wish to ride to Kalamoki village, a quarter of a mile distant. I had with me a polyglot dragoman whom I had taken into service at Constantinople. Our only fellow-passenger was a tall Montenegrin, gorgeously dressed and heavily armed, with whom my dragoman entered into conversation. The Montenegrin said that many of his countrymen were employed as laborers on the canal. He was going that way himself and would be happy to assist us. He led the way to the entrance of the canal. We had not gone more than a dozen steps before we were accosted by the engineer in charge, Mr. Mavrocordato, who spoke the dialect of London so perfectly that I at once took him for an Englishman. He explained to me that his mother was an Englishwoman. Mr. Mavrocordato put himself at my service, and politely offered to take me through the entire work. As this was what I had come for, the offer was gladly accepted.

Here we were at the entrance of one of the most stupendous works of the nineteenth century, or of any century. I looked upward and inward. The prism of the excavation is a little less than four miles long and perfectly straight. The ground rises rather abruptly at either end, and continues to rise gradually to a point about midway, where it is 260 feet above water level, *i. e.*, 100 feet higher than Niagara Falls. The cut is to be carried twenty-two feet below water level, and the width at bottom is to be eighty-six feet. The slope of the bank is sixty degrees, the material, a calcareous tufa having the appearance of an indurated clay, being perfectly secure at that inclination, and not washing perceptibly by rain.

Engineers will understand what is implied by a cut of this magnitude, but laymen can appreciate it only by standing at the base of the excavation and looking upward. I did not get the full effect as it will be eventually, because there is still about sixty feet vertically to be taken out, but the impression one receives when passing through the canal in its present state, and reflecting that this is all the work of man and not of the Cyclops, is quite overpowering.

Looking inward, that is, toward the western end, the canal seemed to be filled with fog, and I supposed that there must be a mist driving in from the Gulf of Corinth. But this appearance was due to the dust caused by the workmen who were digging down the sides of the prism, standing on a series of steps extending from bottom to top. There was a shower of earth falling along a space of half a mile near the centre of the cut. This material was disposed of by steam dredges which lifted the loose earth in buckets on an endless chain and deposited it in cars to be drawn by locomotives to the dumping-grounds. This is the widening process.

The deepening process is quite different. For the latter a trench is first sunk, wide enough and long enough to receive a train of cars. At the end of the trench inward a tunnel is excavated to receive the train. From the top of the tunnel to the surface of the superincumbent ground, where the laborers stand, may be twenty or twenty-five feet vertically. Then shafts are sunk at regular intervals down to the tunnel, along the line of the railway track, and the earth is shovelled into these openings and finds its way with the least amount of manual labor into the cars. The openings gradually assume a funnel shape like mill hoppers, extending the full width of the prism, and accordingly a person desiring to traverse the canal must skirt the perimeter of these hoppers at the risk of depositing his mortal clay along with that of the Corinthian isthmus in the cars below. Experience had made Mr. Mavrocordato an adept in this kind of spiral exercise. Nor did he seem to be at all disturbed by the blasting operations that were going on both overhead and under foot. My own nerves were somewhat shaken. My Turkish dragoman was the first to retire, which he did on a plea of sore eyes and affliction thereunto from the dust. With some help from the shovellers, I surmounted eight of these funnels, all that were then in operation, and soon found myself on the Corinthian side of the cut. I knew that returning would be as tedious as go o'er, and so I found it, but there was no mishap and no great fatigue in either direction.

The material taken out, as I said, is a calcareous tufa, but is not of uniform color. It is firm enough *in situ* to require blasting, but the blasts are of low power, merely loosening, not shattering the material. In one place only a wall of true limestone is encountered, a part of the backbone of Greece, but here it is only a few feet in thickness. Probably the material is of the kind that an engineer would choose for such a work if he could have his choice, as it is not really refractory, and yet has no tendency to slide.

The present Corinth Canal—there was an old one begun by the Emperor Nero, A. D. 67, on exactly the same line—was initiated by a French company in 1882, the Comptoir d'Escompte being its financial agent. When the latter failed in consequence of the great copper speculation, the work on the canal stopped for want of funds. After an interval of two years it passed into the hands of a Greek company which has found the means for completing it. Twelve hundred men are now employed upon it. These are Armenians, Italians, and Montenegrins. The wages paid is equal to sixty cents per day of our money. I saw them taking their mid-day meal. It consisted only of bread, water, and a few olives. Mr. Mavrocordato tells me that the canal will be

finished within three years, and that it will admit the largest merchant ships now in use in the Mediterranean and will enable any two of them to pass at any point. Being a sea-level canal, it can be operated at the lowest cost. HORACE WHITE.

AMERICA IN ITALIAN LIBRARIES.

VENICE, May, 1891.

I HAVE never failed in the Italian libraries of a hearty welcome as an American librarian, and have been made to stand more than once in rendered courtesies as the representative of what the American people have contributed by administrative methods to the science which it is becoming the fashion to term bibliothecal. It has been gratifying to see how closely American usages have been watched, and how every new development has been studied with a disposition to adopt, perhaps too readily, methods which have sprung out of a condition unbondaged by tradition, and which do not always find the most rapid assimilation to conditions not yet emancipated from centuries of sloth—or what to the American librarian seems like sloth. I found the other day, in looking over some plans which had been prepared for a prospective new building of the Biblioteca Nazionale at Florence (which is to occupy a site in the regenenerated area of the mid-town, where the Ghetto till recently still preserved the flavor and odor of the past), that some of our most recent constructions had contributed ideas as to the disposition of rooms in the administrative parts of the building. When all these technical matters had been seen and talked over, the librarian would say, "Now come to-morrow and look over our old maps."

It is a surprising wealth of sea charts and world maps, representing the growing cosmographical notions which preceded and followed the era of Columbus, which these Italian libraries possess. I have long been familiar with their different geographical types, for with all their numbers—and there must be at least five hundred aggregated in these Italian libraries—they run into distinct groups, characterized both by new acquisitions of knowledge and by personal interpretations of scant data, so that school and individual among the draughtsmen are readily marked as a rule, though there are some puzzling and anomalous exceptions which put the critical functions to task. As specimens of these maps have come to me at home in published or drawn facsimile, and have been accompanied by conjectures as to their date and authorship, I have had previous views to approve or question. I well remember the delight with which, a few years ago, I had the opportunity of subjecting a *portolano* of the sixteenth century to a virgin scrutiny. A dealer in Leipzig had sent to an American collector a beautifully executed little sea atlas on parchment, which was submitted to me to ascertain its authority and date. It was the first time I had seen one of these atlases in America, and very likely it is the only one in the country to-day. I had little difficulty in ascribing it to Battista Agnese, and in placing it not far from the middle of the sixteenth century. I knew Agnese's work from some colored facsimiles and from a photographic reproduction of one of his sea atlases, which Ongania here in Venice had published some years before. The searcher in these Italian libraries confronts the work of Agnese in great profusion. I should judge that he found with navigators, and with those interested in the geographical developments of those days, a better market than the publishers of engraved charts secured with their rapider reproductions.

There may yet be in private hands some of these fifteenth and sixteenth-century atlases which have not come to the attention of scholars, and Nordenskiöld, within these last dozen years, in wandering over Europe and ransacking the shops of the lesser as well as the greater towns, has succeeded in discovering two or three early maps which have confirmed doubtful and established new points in the progress of geographical knowledge, from the time when the dangers of the Atlantic were first tempted. I remember a note which some years ago I got from this Swedish scholar—for it will be remembered he was a professor before he was a navigator—when he had stumbled in an old shop in Warsaw upon an old map which carried back the cartographical history of Greenland (and thus of America) to the fourteenth century. I experienced a sympathetic delight in his communication of the fact. I found the other day in Florence that he was still at work on the subject, and when my eye lighted upon a delineation of Greenland singularly like that of the Warsaw map, it was no surprise to learn that Nordenskiöld had been ahead of me, and that a photographer in the town had recently taken a negative of the map and sent it to Stockholm. It struck the eye at the same time of Prof. Willard Fiske, who was with me, as containing, in an island neighboring to Greenland, a very early mapping of Iceland, which was necessary for his marvellous Icelandic library, and a second negative was ordered.

There are two of the Old World maps which mark important stages in the development of cosmographical knowledge before the fifteenth century, with which I was perfectly familiar from drawings, but of which I was eager to see the originals. One of these is the curious map, showing how England had been responsive to the tidings which travellers had brought from the East, which hangs on a wall of a side aisle in the Cathedral at Hereford, and last summer I made a pilgrimage there to see it. I confess to some annoyance as the good verger, unlocking the doors which concealed it, began to drone his story, which had gone into one ear and out of the other of so many chance tourists. He did not fail to remark that my senses wandered from the course along which he directed them, and I am afraid I left him with an opinion of his visitor's unaccountable indifference. The other of these old maps I saw yesterday in one of the halls of the Doge's palace. This is the famous map of Fra Mauro, embodying, about the middle of the fifteenth century, the results of the Portuguese explorations in the Atlantic, which led the way to the voyage of Columbus. It brings them down to a period when Prince Henry the Navigator had done his work, and Columbus was but a mere lad about the docks in Genoa or rambling through the alleys of Savona. This map, as it is shown at present to the traveller, has been taken from the Marciana, and is placed near the middle of the floor in one of the Palazzo halls which is given to geographical monuments. It stands upright under glass in a large frame, with the north near the floor, so that the legends are conveniently read, for it will be remembered that it was well on in the progress of modern cartographical science before the north became invariably the top of the map. I was surprised at the remarkable clearness and freshness of the lines and the color, and there is little of it that one need puzzle over in deciphering. It is much clearer than the photographs, though I found at Naya's, the photographer under the arcade in the neighboring piazza of St. Mark, two sizes of a photograph, one of the original size in four sheets, and the other a reduction to one sheet, which was sufficiently clear to be satisfactory in most studies of it. It is the larger size which Ongania has included in his series of reproductions of about fifteen of these old maps, under the editing of a distinguished German student in this department, Prof. Theodor Fischer of Kiel.

The walls of the hall where this Mauro map stands are covered with painting on the plaster of cartographical delineations of different parts of the globe. I find no statement in the books of the date of them, but I should say they were executed not much, if at all, before 1600. Rather obscurely placed in one corner, and the smallest, I think, of them all, is a sketch of the coast of North America from Labrador to Florida, giving the Great Lakes as far as Huron, and including Erie, which was so long left out in the early configurations, since the watercourses that connect the Ottawa and the Georgian Bay for a considerable period diverted the westward explorers from the directer course by the Niagara. I should not place this map earlier than the others, and the purpose of it seemed to be to illustrate the claim to North America which England, under Elizabeth, not far from that time, was basing on the right which she had acquired through the Venetians, John and Sebastian Cabot. This seemed to be the purpose of one inscription on a scroll near a long-bearded and begowned figure which I suppose stood for Cabot. It was drawn beneath the map.

The habit of decorating a hall or gallery in these old Italian palaces with such maps seems not to have been unusual; but it was at rather a late stage of discovery that the habit came in, and here, as well as in similar maps in a corridor at the Vatican and in the Palazzo Vecchio at Florence—where they are made to cover the doors of cabinets around a large hall—the student finds little that increases his knowledge as distinct from what he could get from the engraved maps of the period.

Besides what I have already indicated, the hall in Venice contained some Arab and Chinese maps of the sixteenth century, which showed how closely, for the American coasts at least, they had studied the best European sources, though it is possible that they may have been aided by independent knowledge. This is a point to which the student of the comparative cartography of the sixteenth century needs to give further study, for I do not think that all has been made yet that can be out of these Oriental maps, which are not unknown in other European countries, for I looked at some in the Bodleian and at the British Museum.

Of the two large globes which one sees in the photographs of the Hall of the Great Council in the palace of the Doges, one is terrestrial; but it has suffered from age, and is in parts undecipherable. I made out enough, however, to place it too late for much original interest. It offered the huge Californian island which is characteristic of much of the sixteenth-century hydrography of the Pacific regions of America.

The enumeration of the early maps and atlases preserved in the Italian libraries makes a good-sized octavo volume, as published a few years ago on the occasion of the assembling of the Geographical Congress in one of the Italian cities. It is a useful guide to the searcher for these relics, and I found an advantage in keeping it at hand as I looked at such objects in the Laurentian and National Libraries at Florence. One day when I went to the latter

library, the attentive keeper of the manuscripts had got together and assorted the library's wealth of these old maps. They made formidable piles on the tables, for they had in the main come from the old Palatine Library, where it was a fashion to mount these drawings on hinged boards, so that they folded up like screens and made a considerable bulk. At the Biblioteca Laurenziana the loose maps were generally rolled with a thin silk shield following the convolutions. I found among these last a "Carta nautica circa 1524," which deserves more study than I could give it at the time. It will, I conjecture, throw some light on the cartographical history of the Bay of Fundy. It showed the Papal line of demarcation, as modified by the Treaty of Tordesillas, much as it is given in many of the official maps of about that period. A *portolano* of Agnese dated "xii. Feb. MDXLIII." is almost identical, in numbers, variety, and character of the maps, with one which is now in the Carter-Brown library at Providence. Another large map, marked "Salvator Oliva fecit in civitate Marsiliæ anno domini 1620," though the work of a cartographer of recognized authority in his day, shows significantly how the student of these early maps needs to be unceasingly wary, and to make due allowance for the slowness with which geographical knowledge sometimes travelled, or perhaps for the national prejudice which rejected the reports of rival nations. Oliva's knowledge of the coast line of the present United States was a half century at least behind his times.

The development which has been made in the cartographical history of the New World in the interval since Dr. Kohl contributed so much to a knowledge of it, has been so marked that when the United States Coast Survey printed a few years ago an account which Kohl had prepared for the Survey with the knowledge of thirty years before, a grievous wrong was done to a careful and conscientious student, who was well aware before he died that his labors were those of a pioneer, and his results but tentative. Some of the most crucial productions of the geographical studies of the fifteenth and sixteenth centuries have been brought to light since Kohl's day. The great collections of Santarem, Kunstmann, and Jomard now need constantly to be supplemented by later discoveries of sources, particularly as regards the New World. I could but think of this when, the other day, I stood in the Piazza di Spagna at Rome. There one looks on the pillar which Pio Nono erected to commemorate his promulgation of the dogma of the Immaculate Conception, and one at first wonders why this column was set up in the centre of that quarter of Rome given to the occupancy of strangers so largely Protestant; but he understands the reason when he looks beyond and his eye falls upon the College of the Propaganda. The student rarely fails to remember how much he owes to the missions of the Catholic Church for the preservation of cartographical monuments, and how barren the field would be but for the devoted labors with rude instruments of the wandering fathers of the different orders along the ocean, lake, and river sides of the American continent. I referred in my last letter to the help which the map of Hieronymus-Verrazzano had been in rectifying the over-hasty views of Murphy and Bancroft respecting the voyage of another Verrazzano along our Eastern coast in the early years of the sixteenth century. This cardinal map is still preserved in the archives of the Propaganda.

I was glad to find Mrs. Nuttall at work on the two Mexican manuscripts which are preserved in the Laurentian library. Signor Biagi, the librarian, had kindly told me of their possessing a manuscript of Sahagun, the priest who has preserved for us one of the most valued accounts of the Spanish Conquest of the Mexicans and of the Mexican people; and as I found Mrs. Nuttall in the library, she kindly pointed out to me the important features which her study of the manuscript had revealed to her. The printed text which scholars have is, it seems, a condensed one, in Spanish only, and omits some of the descriptive chapters which are found in the present copy. This Laurentian manuscript has, moreover, a Mexican text, in parallel columns, and it is curiously illustrated. It has much additional value from sundry marginal annotations in Sahagun's own hand, attested by his signature. Mrs. Nuttall, who has collated the text word by word with that ordinarily known to scholars, tells me that its value as an improvement on what its editors have heretofore evoked is considerable, and she cannot find that any one of them has used it. The result of her examination, when published, will be a gain to scholars in a field wherein Mrs. Nuttall has already put them under obligations.

Another manuscript which this lady has found in the Laurentian is likely to be of quite as striking importance, as the students of Aztec archæology will of themselves judge when the facsimile reproduction which she is having made is completed. It is a textual and graphic elucidation of the Mexican divinities, and I am not aware that it has ever before been brought to the attention of scholars.

JUSTIN WINSOR.

Correspondence.

THE PENNSYLVANIA BALLOT-REFORM LAW.

TO THE EDITOR OF THE NATION:

SIR: While the Pennsylvania Ballot-Reform Bill, now a law, since its approval by Gov. Pattison on the 19th inst., is a very deformed and unsatisfactory measure as compared with what it was originally, it hardly merits the wholesale condemnation which it received in your issue of the 18th. The Executive Committee of the Ballot-Reform Association could not take the responsibility of advising the approval of the bill, nor could they avoid pointing out its defects in a published letter to the Governor, but they are, I believe, satisfied that he did well to sign it. Defective as it is, it is too good to suit the Quay element in the Legislature. As reported by the Senate Election Committee, it was in far worse shape than now, the merest travesty of ballot reform, and it was only by hard, persistent fighting that Mr. Baker of Delaware County succeeded in getting it into its present shape and in having it passed. The Senate, where the Republican majority was almost a unit against the bill, at first voted not to accept the conference report, hoping thereby to induce the House to do likewise; but, failing in this, they reluctantly decided to reconsider their action. A bill which was so strenuously opposed by the Quay element must have had some good left in it.

You are probably correct in saying that it is inferior to all the other ballot-reform laws except New York's, but I should say that it was much better than this latter both as to facility of independent nominations and the form of the ballot, though far from perfect in either respect. The form of the ballot, while grossly unfair to independent candidates, is but little worse than that in use in all the other States which have adopted the system of grouping the names of candidates by parties (a system at variance with the Australian principle, and which only needs to be thoroughly understood in order to be heartily condemned), and, if I am not mistaken, Massachusetts, New Hampshire, Vermont, and Rhode Island are the only ones which have not done so.

A great deal will depend upon the care with which the blank forms, cards of instruction, etc., are drafted, and there is every reason to suppose that this will be properly done. Upon the whole, therefore, though the reform we hoped for has not been obtained in all its completeness, it has gained a foothold, and one may confidently expect that the same popular feeling which has advanced the cause of ballot-reform so far will in the future carry it on all the way. CHARLES C. BINNEY.

PHILADELPHIA, June 23, 1891.

PRESIDENT WALKER ON THE ECONOMISTS.

TO THE EDITOR OF THE NATION:

SIR: Will you kindly give me space for the ungrateful task of trying to prove that it is not I but you who are in error in the matter of your article, "The Economists and the Public," on the 25th inst.?

You have understood me to reproach the economists with the unreal character of their assumptions, and to object to the cultivation of political economy as a pure science. Referring to me, you say, "Nothing ever taught by the economists is so unreal as the principles of physical science taught in the institution over which he presides."

Now, without inquiring whether there is not a good deal of exaggeration in the last sentence, let me say that I have never questioned the advantage of building up a system of political economy upon a comparatively few, simple assumptions. In my 'Political Economy' of 1883, I said:

"Political economy should begin with the Ricardian method. A few simple assumptions being made, the processes of the production, exchange, and distribution of wealth should be traced out and be brought together into a complete system, which may be called pure political economy, or arbitrary political economy, or *à priori* political economy, or, by the name of its greatest teacher, Ricardian political economy. Such a scheme should constitute the skeleton of all economical reasoning; but upon this ghostly frame-work should be imposed the flesh and blood of an actual, vital political economy, which takes account of men and societies as they are, with all their sympathies, apathies, and antipathies, with every organ developed as in life, every nerve of motion or of sensibility in full play."

My quarrel with political economists is not that their premises are partial and incomplete, but that having, to their own satisfaction, deduced certain principles from such premises, they have gone straight down into the forum or the press, and have there set up those principles as absolutely true and as conclusive upon the public in present practical issues, without admitting that those principles are subject to qualifications in their application to actual affairs, and without confessing the doubtful origin of some of their high-sounding "laws." This is exactly what the leading English economists have habitually done; and in this they have been closely followed by some of their American disciples.

It is true, as you say, that in a school of technology we teach abstract principles. We not only do this laboriously and long, but we train

our students in dealing with such principles, so that they may become capable of sustained reasoning upon any series of assumptions. But it is equally true that we teach the young inquirer never for a moment to think of applying these principles in practice without the most careful reference to the conditions of the case, the materials to be used, the resistance to be encountered, the contingencies that may beset the work; and after all this has been considered, we teach him to introduce a "factor of safety," as well as to make allowance for uncertain elements of expense. And it is precisely for NOT doing the corresponding thing in their department that we blame the economists.

The comparison which you have instituted between the qualifications requiring to be made in practice of the physical laws taught in the Institute of Technology, and the qualifications requiring to be made in practice of the economic principles taught by the college professor, affords an excellent opportunity to illustrate the point in dispute between the two schools of political economy. The physicist, indeed, teaches that water tends to a level; but he also instructs his pupils that, if water be placed in a very small tube, it may be sustained for an indefinite time at about any height above the general level, the attraction, more properly, cohesion, of the walls of the tube being greater than the attraction exerted upon it by the earth below. Now, here is an instance of a physical law which admits of an exception that requires to be distinctly expressed to every student to whom the law itself is taught; for, although the column of water in the tube be small, the principle of capillary attraction is not. The whole earth, in its relations to life, would be revolutionized did this principle fail to operate. To teach that water tends to a level, without adding the exception which exists through capillary attraction, would be unworthy of any physicist.

Now for a corresponding principle and its necessary qualification in economics. Money tends to flow from the place where it has the lower value to the place where it has the higher value. In popular phrase, money, too, seeks its level. This is so generally true and is so important, the movement required takes place so promptly and proceeds so strongly as long as the difference in value subsists, that the statement just made is entitled to be considered one of the chief "laws" of political economy. Yet there is a distinct exception to this. The quantity concerned may be so small as to fall under a kind of monetary law of capillary attraction. A "nickel" containing, say, one cent's worth of metal, passes easily in exchange for five cents, partly, and indeed mainly, because the number of pieces is judiciously restricted, but, in part, also, because the value involved is not sufficient to make it worth taking any pains. Even if these coins were issued in some excess over the real demand for them, they might continue to pass for a long time without obstruction or discount, simply "because the amount concerned would not be worth much thought or effort."

Just here was the error in Mr. Wells's remark about a silver three-cent piece sufficing to do all the money-work of a great people, which, in my Washington address, I commented upon with what you deem undue severity. Mr. Wells made a mistake in that case for want of properly qualifying an economic principle. So small a quantity of silver as that he spoke of would come under the law of capillary attraction. The downward tendency would be neutralized by the influence of the walls of the tube. Hence the statement of Mr. Wells was scientifically inaccurate, while it was politically inexpedient, being one of those remarks which are peculiarly exasperating to opponents. It would have answered Mr. Wells's real purpose just as well had he said that a comparatively small quantity of the precious metals would circulate as money just as freely and effectually as a larger amount.

Two points more, if I may be indulged. (1.) You seem disposed to excuse the economists for not further qualifying their more general propositions, and not guarding their readers against mistaken applications of them, by the plea of insufficient opportunity. Twice in your article it is said that people generally have "time" only for brief and unqualified statements of economic doctrines. Permit me, as a teacher of many years' experience, to suggest that, while it is easier for the professor to prepare himself to teach political economy by the method of abstract reasoning, the easier way of learning for the pupil is that which proceeds by concrete illustrations and by the discussion of actual "cases." The additional time which one might expect would be consumed in this way of studying political economy is really not lost, on account of the greater attention and interest of the pupil. (2.) I think you mistake the relation which exists between pupil and teacher, in schools like this, to which you have referred. You say that "among the essentials of the relation of scholar and teacher are that the scholar shall feel that he does not know and that the teacher does know." Excuse me if I say that, while this is doubtless a correct characterization, so far as the classical colleges are concerned, the most successful teachers of science are those who put themselves in the attitude of studying with their pupils, and of finding out, with them, the objects of their common search. Indeed, it is said that Socrates himself used to employ this method. So far as political economy is concerned, I do not think anything is to be gained, in the way either of discovering the truth or of commanding popular respect, by the teacher pretending to know anything he does not, or even concealing the fact that he is still, on this or on that point, in uncertainty, perhaps in perplexity. It is a sad truth that the airs of the political economist no longer impress the public mind, and that the writer on money, or wages, or taxation, must rely for the effect he would produce upon the force and reasonableness of what he writes.

FRANCIS A. WALKER.

MASS. INSTITUTE OF TECHNOLOGY, June 24, 1891.

[We can only say in answer to this that we read these charges against "the political economists," as we have read the original ones in the address which we criticise, with wonder as to who these political economists are whom Gen. Walker is showing up, and whom he holds responsible for "the wild and vague schemes of human regeneration upon an economic basis" which, he says, are now afloat. In spite of considerable and long acquaintance with the literature of "pure political economy," "arbitrary political economy," and "Ricardian political economy," we confess we have not the least idea who it is that he has in mind, except Mr. Wells, who used that illustration of the three-cent piece. Mr. Wells is the only one he mentions, but surely that three-cent illustration cannot have done all this mischief, by addling the brains of "the benevolent clergymen and ecstatic ladies and prophets and disciples of the industrial millennium," who are producing the existing economic confusion. If Gen. Walker would give us a few references to the works of those who have, for instance, "opposed wholesome measures of reform on the grounds of laissez-faire *alone*"; who have "greeted with contumely *every* suggestion of an exception to the rule of individualism *from whatever source proceeding*"; who have "declared that inconvertible notes, however freely and fully circulated, were not and could not become money"; who have asserted that "money measured value as the yard-stick measures length and the bushel capacity," without regard to "such things as the [effect of] supply and demand" on the money; who have "declined to give *any* consideration to the possible mischief to be wrought by contraction"; who have "refused to concede *any* importance to the possible effects of demonetization" of silver—if, we say, he would put us on the track of these authors of mischief, he would greatly add to the value of his address. The charges are grave, and the culprits should be made to stand up.—ED. NATION.]

THE ONLY NATIONAL POWER.

TO THE EDITOR OF THE NATION:

SIR: M. Carnot, the President of the French Republic, in pursuance of his established policy, has been making a tour in the south of France. There, as everywhere, he has been received with respect and even enthusiasm, and there is no doubt that these visits have done much to establish the republic and substitute the prestige of the Presidential office for that of royalty. In his response to an address of the President of the Council-General at Tarbes, M. Carnot used this expression:

"Whatever your opinions, I welcome you with the same sympathy, for I represent here France as a whole."

About the same time, President Harrison was making a much more extended trip in this country, with the same result of welcome and enthusiasm for the office, without regard to party. In view of this the London *Economist* makes the following remarks:

"The population of the Union has so enormously increased, and personal influence is so localized—each populous State being a sort of kingdom in itself—that the only man audible to the whole nation is the President. A President's message, or even his address, spoken as Mr. Harrison has recently been speaking in the South, is read and weighed by every voter in the States, and that cannot be said of any other person in the American territory. He, and he alone, if an able man, could create rapidly a fresh opinion or secure for a new and broad proposal an attentive hearing. That is an enormous power, and it is one which, as Mr. Cleveland's action about protection shows, can be so exerted as to affect every fortune in the land. A position of that kind in a land without hereditary social eminence is a dazzling one, and no one can wonder that the contest for it shakes the Union."

Here is a tremendous power growing up in both countries for good or evil, and the question is, How can it be best guided and controlled, if at all, in the former direction? Few persons who passed through the period of our civil war can fail to remember, with gratitude and emotion, how important a part was played by Lincoln's personal character and influence. And yet these were far less important in a

contest in which the country was sharply divided into two sections almost unanimous in their opposition to each other, than they would be where the lines of division were horizontal instead of perpendicular. Suppose violent dissensions, coming to blows, were to arise in one region upon questions which more or less affected all the rest, such as labor agitation, protective tariff, inter-State commerce, taxation, race jealousies, or even a mere division upon party names like Democrat and Republican. Think what a difference it would make whether the man at the head of all, and whom all looked up to, was a commonplace intriguer, owing his success to the manipulation of local caucuses, and his support to those whom he had bound by offices, or lucrative jobs, or other political and social favors, or was a broad and high-minded man of honor, ambitious, indeed, of success, but more ambitious of a pure and lofty reputation with the country, with posterity, and with the world—in short, a Washington or a Lincoln.

In selecting a man, like a grain of sand from the millions on the seashore, to hold such a high position above his fellows, there are two ways open. One is that which we pursue now of building up, like coral insects, from below, sending delegates practically selected by local party managers to conventions; choosing by these party delegates in conventions a candidate negatively available from a party point of view—that is, a lay figure upon which can be hung a label with "Democrat" or "Republican," of such a kind that nobody can paint it out; then, when the people have been worked up to select the least of two evils, making their choice a "mayor of the palace," a puppet registering the decrees of powerful cliques in Congress, having little or no positive power either as to legislation or administration, limited to a negative upon the schemes of Congress, or (if he has the superb audacity to have an opinion of his own) able only to fire it off, like Cleveland's tariff message, as a shot in the air; and then, when four or eight years have passed without definite achievements of any kind, resuming the process *de novo*.

The other method requires some appeal to the imagination. Under it Congress would be made an arena for testing the abilities and character and integrity of public men. Under the guidance of high executive officials, the public business would be prepared, taken up, and debated publicly at the opening of the session. Members, instead of being lost in the committee-rooms, would appear as individuals before their constituents and the country, the strongest working to the top and creating a public opinion which would sooner or later dictate to the nominating conventions. The mode of obtaining this result is set forth in detail in the unanimous report of a committee of eight to the United States Senate on February 4, 1881.

With this line of thought a spectre presents itself in the person of President Balmaceda of Chili, and the question follows: "Is that what we are coming to?" A prompt negative meets it as far as appreciable time is concerned. The suffrage is limited in Chili, the population poor and ignorant, and exercising no such control as that of this country. Yet of the two methods above indicated, the first has unquestionably the most decided tendency to produce such a result. Balmaceda certainly could not have done what he has unless through a band of followers bound to him by ties of private interest as against the mass of the people, just as Louis Napoleon did in France in 1851. If his whole public life, in every action and almost every thought, had been kept before an intelligent people of voters by a free press and the public criticism of Congress, it would have been easy for that body to arouse a tempest of opposition before which even he must have quailed. The danger to this country is from Presidents made by rings of selfish and scheming politicians. It must be averted, if it is averted, by Presidents made by the voice of the nation, and compelled to turn frankly to the nation for confidence and support. G. B.

BOSTON, June 20, 1891.

ESPRIT D'ESCALIER.

TO THE EDITOR OF THE NATION:

SIR: I have noticed some discussion in your journal of the phrase "esprit d'escalier." I find in *L'Illustration* for June 13 the following passage, which may have some interest for your readers and some bearing on the question discussed. It occurs in an article entitled "Amis et Ennemis," and signed by Marie Anne de Bovet:

"J'en ai été toute décontenancée; aussi est-ce seulement en descendant l'escalier que j'ai trouvé ce qu'il y avait à répondre. Cette mésaventure arrive quelquefois: on appelle cela 'l'esprit du palier'!"

Is this the true French form of the phrase?

Yours truly, KENYON COX.

NEW YORK, June 26, 1891.

[Littré does not notice it among his proverbs under *palier*. Between the landing and the stairs there seems little to choose.—ED. NATION.]

Notes.

J. B. LIPPINCOTT Co. have in press a Supplement to Allibone's 'Critical Dictionary of English Literature and British and American Authors,' in two volumes, containing more than 37,000 author titles and more than 93,000 subject titles, by John Foster Kirk; a 'Life of Benjamin Harris Brewster,' by E. C. Savidge, M.D.; 'The Swiss Republic,' by Boyd Winchester, late United States Minister at Bern; 'Harmony of Ancient History,' by Malcolm Macdonald; and 'Atlantis Arisen: or, Talks of a Tourist about Oregon and Washington,' by Mrs. Frances Fuller Victor.

'Practical Morals,' two essays which divided the prize of $1,000 offered by the American Secular Union for the best work calculated to aid teachers in imparting moral instruction on a scientific basis, will make a book to be published by Houghton, Mifflin & Co. The authors are (of "The Laws of Daily Conduct") Nicholas P. Gilman and (of "Character Building") Edward P. Jackson, both already known as writers.

The humorous serial lately running in *Harper's Weekly*, with illustrations by A. B. Frost, 'Farming,' by R. K. Munkittrick; and two novels, 'St. Katherine's by the Tower,' by Walter Besant, and 'My Danish Sweetheart,' by W. Clark Russell, are announced for publication by Harper & Bros.

Macmillan & Co. will bring out a new illustrated volume, by Joseph Pennell, on the River Thames, 'The Stream of Pleasure,' in two editions, one limited on large paper; and 'The Filibusters of the Spanish Main,' by James Jeffrey Roche.

Ginn & Co., Boston, have nearly ready 'The Gate to Cæsar,' by Wm. C. Collar, Principal of the Roxbury Latin School. It is a novel editing of the 'Gallic War.'

Salmon's 'School Grammar' (Longmans) possessed such preëminent merit as to cause its speedy adoption in many of our schools as soon as it made its appearance on this side of the water. Naturally the illustrative sentences were chosen in some cases with reference to British eyes, and in this particular the work was susceptible of adaptation to American use. A revision has accordingly taken place, and the publishers have just brought out a fresh edition, with a commendatory introduction by Prof. E. A. Allen of the University of Missouri. The Grammar deserves to supersede all others with which we are acquainted.

Houghton, Mifflin & Co. send us the twelfth edition of Sweetser's 'New England: A Handbook for Travellers,' a work without a peer, save the others by the same hand on the White Mountains and the Maritime Provinces.

Last year we chronicled Mr. William Martin Conway's 'Climbers' Guide to the Central Pennine Alps,' a little volume for the pocket, giving the most minute directions for independent explorers in that part of Switzerland. He follows it up this year with a 'Climbers' Guide to the Eastern Pennine Alps,' likewise published in London by Unwin. The edition is but 400 (that magic society number with us), and it appears that everything conspires to increase the body of "Centrists"—the mountaineers who start from the great centres of fashion—at the expense of the "Excentrists," on whom, Mr. Conway insists, "the future welfare of mountaineering so largely depends." His scheme for treating all the divisions of the Alpine chain in a series of little books like these guides was rejected by the Alpine Club, which has preferred to reprint Ball's Guide. Mr. Conway consequently locks up in his drawer his prepared 'Climbers' Guide to the Lepontine and Ticino Alps,' and bids good-bye to guide-book writing—and to Zermatt. It is much to be regretted that his disinterested labors have met with such a chilling reception.

E. Schuberth & Co. have reproduced in book form two lectures by Dr. F. L. Ritter on "Music in its Relation to Intellectual Life" and "Romanticism in Music." The second of these will be found the more readable, discussing as it does the principal composers of the Romantic School, and pointing out the qualities which distinguish them from older schools.

Lee & Shepard, Boston, have done well to compile a second series of 'Speeches, Lectures, and Letters by Wendell Phillips.' This collection really antedates the former one, beginning with Mr. Phillips's maiden speech in the anti-slavery cause at Lynn, a few months before his burst of eloquence at the Lovejoy meeting in Faneuil Hall. The volume ends with personal obituary tributes to Theodore Parker, Francis Jackson, Abraham Lincoln, the Garrisons, and Harriet Martineau, his last public utterance. Here also is the famous lecture on the "Lost Arts," which Mr. Phillips omitted from the series of 1863, perhaps because there was still a call for it from the lyceums; the oration on Daniel O'Connell on the Liberator's hundredth birth anniversary; the address at Harvard College at the centennial anniversary of the Phi Beta Kappa Society, "The Scholar in a Republic"; and a great variety of discourses on capital punishment, woman's rights, labor, the Chinese, temperance, etc. In short, while the cream of Mr. Phillips's oratory is to be looked for in his own collection, this fresh and for the most part later gleaning is indispensable to a just estimate of the thinker and agitator. Its value is enhanced by the slender prospect of any adequate Life of Phillips being written. A copy of Vinton's oil painting serves as a portrait

frontispiece, and suggests a better likeness than the "process" gives back.

No. 42 of the Bibliographical Contributions of the Library of Harvard University deals with the "Orators and Poets of Phi Beta Kappa, Alpha of Massachusetts," and is due to the labor of Mr. William Hopkins Tillinghast, Assistant Librarian, in connection with a new edition of the catalogue of the Harvard chapter. The catalogue of 1855 proves to have been untrustworthy, but a complete record seems now impossible. The list is a very distinguished one, and while the chapter has not been independent of foreign talent, the list has a marked Massachusetts and Harvard complexion. George Bancroft's poem (1823) is not discoverable in his volume of verse published in the same year. Edward Everett, Caleb Cushing, Emerson, Holmes, and Hedge were poets and orators by turns.

Joel Munsell's Sons, Albany, have prepared on their own responsibility a supplement to Durrie's 'Index to American Genealogies' issued in 1886. It makes a thin volume of sixty-one pages in double columns, and includes, among other works of reference, the three volumes of 'American Ancestry' published by the same firm a few years ago.

From the Historical Printing Club, Brooklyn, we receive two brochures, 'The Press of North Carolina in the Eighteenth Century,' by Stephen B. Weeks, and 'Wills of George Washington and his Immediate Ancestors,' edited by Worthington C. Ford. The North Carolina press began its productions in the middle of the century, and these were not more appetizing than laws and journals except for an occasional political tract or sermon or text-book. With the Washington wills our readers are, thanks to Mr. M. D. Conway, already partly familiar. Mr. Ford has added a number of cognate letters from Washington, with the later wills of Bushrod and John Augustine Washington, and John Custis; and has provided a convenient index of proper names. The editions in both cases are limited.

The latest volume to appear of the excellent but slightly unequal series of "Les Grands Écrivains Français" is the Comte d'Haussonville's brief biography of Mme. de La Fayette (Paris: Hachette; New York: F. W. Christern). M. d'Haussonville's narrative is not quite as flowing as that of certain of his predecessors in this series, but his subject is as interesting as any, and his task has been conscientiously performed. Certain letters to Ménage are now for the first time printed, and the date of the death of M. de La Fayette is also for the first time declared, revealing that Mme. de La Fayette was not a widow when her long intimacy with La Rochefoucauld began. Her chief title to remembrance now, nearly two hundred years after her death, is not that she was the friend of La Rochefoucauld or the intimate of Mme. de Sévigné, but that she was the author of the 'Princesse de Clèves,' one of the masterpieces of French fiction, popular to this day, and holding its own beside the later studies of sensibility by M. Paul Bourget and other nineteenth-century analysts. M. d'Haussonville, in discussing its charms, likens it in turn to the 'Crime d'Amour' of M. Bourget and to the 'Supplice d'une Femme' of MM. Dumas and Girardin.

The first *fascicolo* of the reproduction of Leonardo da Vinci's 'Codice Atlantico,' preserved in the Ambrosian Library at Milan, has left the press. This disorderly compilation of a fraction of Leonardo's MSS. which escaped the neglect of his heirs was the work of a sculptor, Leone Leoni. It contains more than 1,700 designs of inventions, etc., and consists of 402 folios. The forty heliotype plates of the first instalment of the reproduction represent the first fourteen folios. The plan of editing is to copy punctiliously Leonardo's notes as written, and to subjoin a modern reading for the common understanding. This codex has suffered many vicissitudes: it was an object of envy to Charles I. of England, who offered a large sum for it in vain, and it was among the spoils of the French in 1796, who restored it to the Ambrosian Library with reluctance after nineteen years' possession. Twelve other codices of Leonardo, carried off at the same time, the French held on to.

A characteristic straining of the law to the restriction of the freedom of the press is the recent decision of the German Reichsgericht, or Supreme Court of the Empire, making proof-readers as well as editors legally responsible and liable to prosecution for the contents of newspapers. The Court argues that the proof-reader, in performing the duties of his office, must come to a knowledge of thoughts, expressions, and statements which any given article contains, and by permitting them to pass renders himself an accessorial agent for the dissemination of the same, and thus becomes *particeps criminis*. As the functions of the proof-reader are not at all editorial or critical, and as he has no right to erase a single word because the idea it expresses is displeasing to him, it seems the height of injustice and absurdity to punish him for what he cannot possibly prevent and is no more responsible for than the type-setter.

In an academical dissertation entitled "Die Ursitze der Indogermanen und das westindogermanische Zahlensystem," Johannes Schmidt of Berlin endeavors to show that the Germanic numerals are the hybrid product of a crossing of the decimal and duodecimal systems, which took place in prehistoric times. From this mixture of Aryan decimalism and Babylonian duodecimalism (the latter having an astronomical origin) he infers that the primitive seat of the Indogermanic race must have been in Asia and near ancient Babylon. As this conclusion is opposed to the most recent researches on this subject, scholars will be inclined to approach it with caution.

The study of medicine at Oxford has made great progress and attracted a steadily increasing number of students since the passing of the Medical Statutes in 1886. This increased demand for the facilities at hand has just been met by the appropriation of £7,000 which has been made by the University for the better and more permanent accommodation of students in anatomy. The training thus given may not become too one-sided and special, because every student of medicine, before entering on the scientific and preparatory part of his professional studies, must, in addition to whatever other examinations may be required for the degree of B. A., have satisfied the examiners in the Natural Science School in physics, chemistry, animal morphology, and botany. Nor is the work done at Oxford in danger of curtailing the necessary practical schooling to be had only in large hospitals, for it relates exclusively to the scientific or preparatory part of the course, and leads up to a first or theoretical examination in human anatomy, physiology, organic chemistry, and pharmacology. As a rule, the student of medicine leaves the University as soon as he has passed this examination, and proceeds with his professional studies elsewhere.

One of the features of the summer courses at Harvard which we mentioned last week, is the presentation of a series of twenty-seven lectures and conferences by various instructors on the methods of instruction in the several departments of the summer schools. The list includes Shaler on geology, Sargent on physical training, Davis on meteorology and physical geography, Bartlett on German, Sanderson on French, Chaplin on applied science, Bergen and Sabine on physics, Torrey on chemistry, Ganong on botany, Royce on the teacher's profession, Manly and Lathrop on English, Lincoln on physiology, and Byerly on mathematics. The lectures will be given late in the afternoon, when all members of the various summer courses will be free to attend them. As most of the summer students are teachers, the conferences promise to be of much practical value in spreading the methods of instruction adopted at Harvard.

The June Proceedings of the Royal Geographical Society opens with an account of an excursion among the mountains of Daghestan, including an ascent of the peak Shalbuz, famed in the 'Arabian Nights' as the home of the fabled roc, whose wings, when spread, obscured the sun. Although the country has been under the nominal control of Russia for over sixty years, the Turkish language is still universally spoken by all, Georgians, Tartars, Armenians, and Lesghians. This paper is followed by a description of two journeys made by Mr. A. E. Pratt to the western frontier of China for the purpose of making natural-history collections. This was very successfully accomplished, about 700 species of plants having been brought to Kew from the mountains near Ta-tsien-lu, notwithstanding the superstition of the natives, who attributed the unusual severity of the weather to the fact that a stranger was living in the forest, and compelled him to leave. On the sacred mountain Omei Mr. Pratt "more than once witnessed the curious phenomena known as the glory of Buddha. Standing on the edge of the precipice and looking down into the sea of mist which generally fills the valley below, I saw, about 150 feet beneath me, the golden disk, surrounded by rainbow-colored rings of light, which is the chief marvel of Mount Omei and the clearest evidence of its sanctity. Every year many pilgrims commit suicide by throwing themselves down this cliff."

Arminius Vámbéry's suggestive paper on "British Civilization and Influence in Asia" is the leading article in the *Scottish Geographical Magazine* for June. After dwelling upon what has been accomplished in India, he expresses his astonishment at the English "indifference to, and want of information coning, matters connected with the East." He also maintains that to the cold reserve and haughtiness which the British trader, soldier, and civil officer too frequently exhibit in their intercourse with Asiatics must be ascribed "the unmistakable decrease of British influence in those parts of Asia where your countrymen have to face the competition of other more pliant and less rigid representatives of the West, and where British manufacturers, in spite of their unquestionable superiority, have lost more than one market." Mr. E. G. Ravenstein discusses the history of the cartography of the Lake Region of Central Africa, in which he scouts the idea advanced by Mr. Stanley that the Ruwenzori range is Ptolemy's Mountains of the Moon. Accompanying the paper are reproductions of Ptolemy's and other early maps of this part of Africa. The closing article, on the definitions of geographical names, is by K. Ganzenmüller. It will prove suggestive and helpful to all teachers of geography.

—The July *Atlantic* is indebted to Prof. Lanciani for a paper which shows what light has been thrown upon early Christian history in Rome by recent excavations. He writes particularly of the Acilian family, and uses the instance to illustrate the spread of the new religion among the patricians, and incidentally he touches upon the interesting tradition of the friendship of Seneca and St. Paul, a subject which will be fully treated hereafter. The inference that primitive Christianity was not so exclusively a possession of the poor and humble as has been thought, is the most important result of these researches. Mr. W. J. Stillman continues the subject of Rome in an article which divides interest between the prehistoric days of the city and its present attractions as a place of refuge and sentiment. He predicts that the disfiguration of old Rome by the Parisian style of the "new quarter" will pass with as little injury to the "Eternal City" as the old Gothic and Bourbon devastations; and meanwhile he assures the tourist that the common fear of the Roman climate is a superstition. Under the enigmatic title of the "Story of a Long Inheritance," Prof. M. Davis follows the "whirl" of a tornado through its causes till he derives it from the "whirl" of the original nebula. Miss Repplier contributes the most readable paper in an amusing account of her researches in the desert of the literature of the Unknown Public. She explored in particular the penny fiction of the English railway news-stalls, and discovered that it was very dull and tame; but therein she found her account, inasmuch as occasion was thus given her for some very pertinent criticism of those who think they know what the Unknown Public wants, and write on the subject to their own confusion. Prof. Shaler makes an attack on the examination system in colleges with great vigor.

—The *Century* easily excels in variety of interest while maintaining its serial features and furnishing a copious supply of short summer fiction; but it offers few papers for special comment because either of their novelty or significance. The student of municipal government will find an excellent account of how Paris is organized and administered, with details of its budget and some useful comparisons with our own ways and means; and those interested in Indian affairs will do well to consider how Indian warfare looks from the army point of view as set forth in a paper upon the campaigns of Gen. Miles, also attractive as mere history. Provençal bull-fights, the geography of the moon, and the always welcome cuts after the Italian masters by Cole, with Mr. Stillman's commentary, illustrate the unusual range and contrasts of the matter and also of the illustrative art which fill the pages. A curious historical relic is given in a eulogy of Lincoln from the long-silent lips of Horace Greeley. This speech was written about 1868, and is strangely reminiscent of Greeley's strong character, with that living-voice quality in the phrase and mode of thinking which vitalizes the text only to remind us how completely the great journalist has passed away. The praise he gives Lincoln is measured, but it is sincere and full, and follows the direction that criticism of Lincoln has since taken; it is, from Greeley's point of view, singularly just. He holds to his belief that Lincoln did not realize the imminence of the war, nor its severity until after Bull Run, and he criticises his policy in some particulars; he emphasizes the view that events controlled him in the Presidency, and that he was not of exceptional ability by nature. The comparison of the eulogy with that by Carl Schurz will bring out the influence of the last quarter century in defining Lincoln's fame.

—*Scribner's* has evolved so strongly an individualized type that the character of each number can be anticipated with perhaps more certainty than is the case with its rivals, and in the present issue it is needful only to mention the ocean-steamship serial, the two sporting articles on the Izard and the Black Seabass, and the end-paper, a criticism of Landor, or more accurately of the critics of Landor, in which Mr. Clymer pleads for the literature of the coterie, as if any one meditated disturbing the Brahmins of taste in their contemplative mental habits. The world is as careless of them as of the Epicurean gods, and if they enjoy themselves with him who covertly boasted that he "neither lived nor died with the multitude," no one will trouble the fine seclusion of their lofty pleasures; indeed, some of us who are not out of contact with the "multitude," may occasionally take a half-holiday in the trim gardens without jostling any of the unworldly philosophers who there abide. The sacrosanct ideal of taste, however, though not without justification in certain relations, has, like most mortal sanctities, a wonderful affinity with humbug; as soon as comparative criticism begins, its idols usually fall down. The opening of the Japanese Parliament offers material for an entertaining sketch by Prof. Wigmore; and Denmark, Hayti, and the Mexican border also come within the geographical survey of this number, and there is the usual fiction. If there be anything for which the habitual reader is unprepared, it is where the frontispiece exposes to the pitying eye what seems a lost explorer, insufficiently clothed, sitting on a glacier. Can this be Horace's "Faunus"? And those poor women, without even the decency of a shiver upon them in the white waste of Greenland's icy mountains—are they our old friends the nymphs?

—*Harper's* is distinguished by the friendly comment of Mr. Curtis upon Dr. Holmes, as a poet and as a writer of prose, in which he defines the veteran author's most prominent traits, and expresses the popular appreciation of the Autocrat and the Phi Beta Kappa poet very nearly as it exists in the mind of the public, who read the terse sayings and smooth verses with gusto now as much as formerly. It is doubtless true that no author of our own day, with an intellectual snap, tells more on the average mind. Mr. Curtis, in the course of his paper, gives an entertaining and sympathetic account of the taste of the town of Boston in the epoch of Dana and Pierpont, and does something more than justice to the episode of N. P. Willis in its literary annals; but the sketch is characteristic in its light touch and slightly veiled humor. In the remainder of the number we find nothing so noticeable as Mr. Brander Matthews's "Briticisms and Americanisms," in which he gives examples of the development of English in its colonial homes, and rejects the authority of London in the use of words. On some of his examples more might be said than he ventures, and in his manner of address there is a touch of irritability, a disposition to lecture our cousins a little, that show how imperfect still is our self-possession in the use of our mother-tongue as we learned it on this side. The bulk of the magazine is made up of serial papers.

—The advocates of the higher education of women may claim for their views the weight of a century more of existence than is usually accredited to them. In a brief monograph, reprinted from the April and May numbers of the *Journal of Education*, Karl Bülbring reviews the relation to more modern thought of the works of Mary Astell, a brilliant woman of the seventeenth century, whose name has fallen into undeserved oblivion. In her spirited protest against the "plaything" or "upper servant" conception of her sex, Mary Astell preceded the supposed protagonist of the rights of women, Mary Wollstonecraft, by a hundred years. It is interesting to be able to decipher in a 'Serious Proposal to the Ladies' (of the year 1694!) the outlines of the first scheme of a college for women. Mrs. Astell sets herself to prove, in her 'Essay in Defense of the Female Sex,' the revolutionary doctrine that Providence and nature intend woman to be a companion and equal to man. She does it, however, in conciliatory fashion: "A Man ought no more to value himself upon being Wiser than a Woman, if he owes his Advantage to a better Education and greater Means of Information, than he ought to boast of his Courage, for beating a Man when his Hands were bound." To Mrs. Astell justly belongs the distinction of "the first expression of the opinion that lasting happiness in marriage is best secured by intellectual intercourse." This is the burden of her 'Reflections upon Marriage.' It is an indication both of her own robustness of mind and of the self-evidence of her main conclusions that she is able to draw them from premises which are commonly believed to lead only to contrary ones. That her books are so scarce as to be practically inaccessible is to be regretted. They deserve to be known by those who prefer to reconcile the departures of the present with the traditions of the past, as well as by those to whom the history of the progress of the sex is in itself a matter of interest.

—Most of the older States now have, or have had, State geological surveys. Specialists in other departments have been attached to many of these surveys, and the reports upon geology and upon various branches of natural history have been numerous and valuable. It has remained, however, for the State of Illinois to organize upon a permanent basis a State Laboratory of Natural History of much wider scope than the so-called "State Geological Surveys," and to connect it closely with the public educational system. The Laboratory may be said to be the direct offspring of the State Natural History Society, which originated in 1862 and terminated its useful career in 1871, when its museum was transferred to the State. The collections were then formed into the State Museum of Natural History. In 1877, the Museum proper was transferred to Springfield, and the Laboratory was left in the State Normal University at Normal, to enter upon its present functions under the able directorship of Prof. S. A. Forbes. Its chief objects, in the language of its Director, are "the prosecution and aid of original work on the natural history of the State (preference being given to subjects having special educational or economical value), the publication of the results of such work for the information of the people, the training and instruction of teachers of botany and zoölogy for the public schools, and the supply of the necessary scientific material to these schools, to the State Museum, and to the State educational institutions. It affords a place to which any specialist or scientific student may come with the assurance that he will find everything necessary for special study or original

work on the natural history of Illinois, to which any teacher may come for preparation to teach these subjects intelligently, and upon which the officers of any school may draw for material to illustrate the scientific work of their school." We have received from the Laboratory examples of its publications, which are numerous and of a high order, and attest the amount and quality of the work done by, or under the directorship of, Prof. Forbes. A number of the bulletins are technical in character, being descriptions of new species, or are lists of the plants and animals living within the State; but a glance at the titles shows that Prof. Forbes has interpreted the law providing for the institution as chiefly designed to foster investigations having an economic bearing. Accordingly, a large number of the reports are upon subjects that have a practical value to the farmer or that relate to the food supply. We believe this example will not be lost on other States.

JAMES'S PSYCHOLOGY.—I.

The Principles of Psychology. By William James, Professor of Psychology in Harvard University. [American Science Series, Advanced Course.] Henry Holt & Co. 1890. 2 vols., 8vo, pp. xii+689, and vi+704.

Upon this vast work no definitive judgment can be passed for a long time; yet it is probably safe to say that it is the most important contribution that has been made to the subject for many years. Certainly it is one of the most weighty productions of American thought. The directness and sharpness with which we shall state some objections to it must be understood as a tribute of respect.

Beginning with the most external and insignificant characters, we cannot much admire it as a piece of bookmaking; for it misses the unity of an essay, and almost that of a connected series of essays, while not attaining the completeness of a thorough treatise. It is a large assortment of somewhat heterogeneous articles loosely tied up in one bag, with tendencies towards sprawling.

With an extraordinarily racy and forcible style, Prof. James is continually wresting words and phrases of exact import to unauthorized and unsuitable uses. He indulges himself with idiosyncrasies of diction and tricks of language such as usually spring up in households of great talent. To illustrate what we mean, we will open one of the volumes at random, and we come upon this: "A statement *ad hominem* meant as part of a reduction to the absurd." Now a *reductio ad absurdum* is a species of demonstration, and as such can contain no *argumentum ad hominem*, which is merely something a man is obliged by his personal interests to admit. On the next page, we read: "This dynamic (we had almost written dynamitic) way of representing knowledge." On the next page: "They talk as if, with this miraculous tying or 'relating,' the Ego's duties were done." It is the same with the technical terms of psychology. Speaking of certain theories, our author says they "carry us back to times when the soul as vehicle of consciousness was not discriminated, as it now is, from the vital principle presiding over the formation of the body." How can anybody write so who knows the technical meaning of *vehicle*? On the same page occurs this phrase, 'If unextended, it is absurd to speak of its having space relations at all," which sounds like a general attack on the geometry of points.

Prof. James's thought is highly original, or at least novel; but it is originality of the destructive kind. To prove that we do not know what it has been generally supposed that we did know, that given premises do not justify the conclusions which all other thinkers hold they do justify, is his peculiar function. For this reason the book should have been preceded by an introduction discussing the strange positions in logic upon which all its arguments turn. Even when new theories are proposed, they are based on similar negative or sceptical considerations, and the one thing upon which Prof. James seems to pin his faith is the general incomprehensibility of things. He clings as passionately to that as the old lady of the anecdote did to her total depravity. Of course, he is materialistic to the core—that is to say, in a methodical sense, but not religiously, since he does not deny a separable soul nor a future life; for materialism is that form of philosophy which may safely be relied upon to leave the universe as incomprehensible as it finds it. It is possible that Prof. James would protest against this characterization of his cast of mind. Brought up under the guidance of an eloquent apostle of a form of Swedenborgianism, which is materialism driven deep and clinched on the inside, and educated to the materialistic profession, it can only be by great natural breadth of mind that he can know what materialism is, by having experienced some thoughts that are not materialistic. He inclines towards Cartesian dualism, which is of the true strain of the incomprehensibles and modern materialism's own mother. There is no form of idealism with which he will condescend to argue. Even evolutionism, which has idealistic affinities, seems to be held for suspect. It is his *métier* to subject to severe investigation any doctrine whatever which smells of intelligibility.

The keynote of this is struck in the preface, in these words:

"I have kept close to the point of view of natural science throughout the book. Every natural science assumes certain data uncritically, and declines to challenge the elements between which its own 'laws' obtain, and from which its deductions are carried on. Psychology, the science of finite individual minds, assumes as its data (1) *thoughts and feelings*, and (2) a *physical world* in time and space with which they coexist and which (3) *they know*. Of course these data themselves are discussable; but the discussion of them (as of other elements) is called metaphysics, and falls outside the province of this book. This book, assuming that thoughts and feelings exist, and are the vehicles of knowledge, thereupon contends that Psychology, when she has ascertained the empirical correlation of the various sorts of thought and feeling with definite conditions of the brain, can go no farther—can go no farther, that is, as a natural science. If she goes farther, she becomes metaphysical. All attempts to *explain* our phenomenally given thoughts as products of deeper-lying entities (whether the latter be named 'Soul,' 'Transcendental Ego,' 'Ideas,' or 'Elementary Units of Consciousness') are metaphysical. This book consequently rejects both the associationist and the spiritualist theories; and in this strictly positivistic point of view consists the only feature of it for which I feel tempted to claim originality."

This is certainly well put—considered as prestigiation. But when we remember that a natural science is not a person, and consequently does not "decline" to do anything, the argument evaporates. It is only the students of the science who can "decline," and they are not banded together to repress any species of inquiry. Each investigator does what in him lies; and declines to do a thousand things most pertinent to the subject. To call a branch of an inquiry "metaphysical" is merely a mode of objurgation, which signifies nothing but the author's personal distaste for that part of his subject. It does not in the least prove that considerations of that sort can throw no light on the questions he has to consider. Indeed, we suspect it might be difficult to show in any way that any two branches of knowledge should be allowed to throw no light on one another. Far less can calling one question scientific and another metaphysical warrant Prof. James in "consequently *rejecting*" certain conclusions, against which he has nothing better to object. Nor is it in the least true that physicists confine themselves to such a "strictly positivistic point of view." Students of heat are not deterred by the impossibility of directly observing molecules from considering and accepting the kinetical theory; students of light do not brand speculations on the luminiferous ether as metaphysical; and the substantiality of matter itself is called in question in the vortex theory, which is nevertheless considered as perfectly germane to physics. All these are "attempts to explain phenomenally given elements as products of deeper-lying entities." In fact, this phrase describes, as well as loose language can, the general character of scientific hypotheses.

Remark, too, that it is not merely nor chiefly the "soul" and the "transcendental ego," for which incomprehensibles he has some tenderness, that Prof. James proposes to banish from psychology, but especially *ideas* which their adherents maintain are direct data of consciousness. In short, not only does he propose, by the simple expedient of declaring certain inquiries extra-psychological, to reverse the conclusions of the science upon many important points, but also by the same negative means to decide upon the character of its data. Indeed, when we come to examine the book, we find it is precisely this which is the main use the author makes of his new principle. The notion that the natural sciences accept their data *uncritically* we hold to be a serious mistake. It is true, scientific men do not subject their observations to the kind of criticism practised by the high-flying philosophers, because they do not believe that method of criticism sound. If they really believed in idealism, they would bring it to bear upon physics as much as possible. But in fact they find it a wordy doctrine, not susceptible of any scientific applications. When, however, a physicist has to investigate, say, such a subject as the scintillation of the stars, the first thing he does is to subject the phenomena to rigid criticism to find whether these phenomena are objective or subjective, whether they are in the light itself, or arise in the eye, or in original principles of mental action, or in idiosyncrasies of the imagination, etc. The principle of the uncritical acceptance of data, to which Prof. James clings, practically amounts to a claim to a new kind of liberty of thought, which would make a complete rupture with accepted methods of psychology and of science in general. The truth of this is seen in the chief application that has been made of the new method, in the author's theory of space-perception. And into the enterprise of thus revolutionizing scientific method he enters with a light heart, without any exhaustive scrutiny of his new logic in its generality, relying only on the resources of the moment. He distinctly discourages a separate study of the method. "No rules can be laid down in advance. Comparative observations, to be definite, must usually be made to test some preëxisting hypothesis; and the only thing then is to use as much sagacity as you possess, and to be as candid as you can."

PERRY'S GREEK LITERATURE.

A History of Greek Literature. By Thomas Sergeant Perry. Henry Holt & Co. 1890.

In this large and handsome volume Mr. Perry has chosen a good model, and his publishers have done everything to assist him. They have given him "ample room and verge," fair paper, wide margins; they have permitted him numerous illustrations, which are generally interesting, well chosen, and well executed. In these respects the work is an improvement upon its model, Albert Wolff's 'Pantheon des Classischen Alterthums.' An octavo of nearly 900 pages might have been much more handily divided into two volumes; some of the full-page landscapes might have been spared without loss; the restoration of the theatre of Dionysus at Athens (p. 227) belongs apparently to the age of Phædrus, and presents some features that are distinctively Roman. In general, however, the pictures are from authentic sources, and are a tasteful and harmonious embellishment of the literature they illustrate.

Another excellent feature which Mr. Perry's plan shares with his German model is the abundance which it offers of extracts from the more important authors. The usefulness of these extracts even for the superficial reader might have been increased by noting the title and portion of the work from which they were taken; in many cases we have no indication whatever of this or of the English translator. The translations are usually well chosen, and are sometimes new; in particular, Mr. Louis Dyer's versions from Euripides are as spirited and scholarly as might have been expected. Some specimens of hexameters, like Dr. Hawtrey's or Mr. Matthew Arnold's, would have illustrated to the unlearned reader the movement of Homeric verse, which is here almost exclusively represented by the Spenserian stanza and by Chapman's vigorous but involved expression and occasionally rugged numbers.

When we come to the history proper, we find less to say that is favorable. Mr. Perry has read much about Greek literature and thought, but has failed to learn what the Greeks are supposed to teach first and foremost—the sense of measure and proportion, the lesson of clearness and directness. It is not easy to convey an impression of the meanderings, the rambling excursions which our author permits himself, because we should be obliged to cite whole pages of irrelevant discussion. Some of this is introduced by way of comparison and illustration; a large part simply sets forth loosely the author's own philosophy, his notions, his moralizings—in fine, his recollections. The result is a great waste of space which might have been more economically devoted to the business in hand. The brief sketch of Theophrastus affords a miniature of this method and its results. The reader gets from it no clear idea of the nature of the work called 'The Characters,' which might have been given in a very few words. He gets no information as to the interesting personal relations which subsisted between Aristotle and his disciple; none as to the fact that two important botanical works, the 'Researches about Plants' and 'Principles of Vegetable Life,' have been preserved and handed down to us. Yet Prof. Jebb, in his primer, has found room for nearly all of this in a dozen lines. On the other hand, the reader is treated to certain reflections, neither very important nor very pertinent, which fill a quarter of the whole space allotted to the successor of Aristotle. This is a larger allowance than Mr. Perry generally claims for his philosophizing—a tithe is often sufficient for him; but a tithe out of 800 pp. is a large proportion. It is a larger allowance than Thucydides receives, or Plato, or Aristotle, and it is made to an author who is not yet distinguished as a classic or as a philosopher.

No careful writer or thinker ever managed his pronouns with Mr. Perry's daring and fine disdain of context. On p. 619 we read: "It is to the credit of Greece that, when everything else failed them, they held true to things of the intellect." On the preceding page we encounter this luminous comparison: "Just as a medical student does not need to dissect everybody to know human anatomy, so we may find in Isocrates the specimen of the majority of his citizens, just as Demosthenes is the vivid example of the impotent opposition"; or again, "The orator urges Philip to undertake his old hobby." This carelessness of expression corresponds often with vagueness of information and thought, and is accompanied by a self-confident, jaunty philosophy and an unfailing didactic vein. Mr. Perry has himself "undertaken" several hobbies, and he is constantly careering on one or another of them through these pages. In the first place, he has borrowed M. Taine's hobby—a theory of which a recent careful writer has remarked that it probably was never strictly true of the literary development of any country except Egypt. Again he is carried away by the scientific hobby—the conviction that literature as well as everything else not only can be reduced to law, but has been already summarized in some perfectly simple and satisfactory formulæ, which the expert can apply with the greatest ease in the world. The expert is the student of comparative literature, in a large and comprehensive way, who can detect at a glance the resemblance between remotely separated epochs and authors, and can generalize upon its laws and causes. Mr. Perry feels himself equal to this task, and so he rides the hobby of comparison with great freedom and hardihood.

This wandering method and these prepossessions often lead to very unsatisfactory results. It is impossible for the ordinary reader to gather from the confused and somewhat contradictory notice of Aristotle the reason why he has been called "Master of those who know," not only by Dante, but also in some of the most recent appreciations of his scientific labors. It was not, perhaps, necessary in a treatise on literature to touch on these labors at all; but, since this was done, some attempt might have been made to convey an idea of the difficulties that beset an investigator who undertook more than the encyclopædic task of Herbert Spencer, in a region as benighted in respect of physical science as China or Thibet; some idea might have been conveyed "of the enormous range of Aristotle's work within the four corners of biology, his amazing instincts of scientific method, and his immense power of grasping generalizations." The strong expressions we have quoted are not the language of a literary critic—they are the words of Dr. Romanes, who certainly in the matter of biology has some right to speak with authority, and who bases his estimate on facts which he specifies. It is interesting to contrast this language, as well as the testimony of Lewes and of Darwin himself, with the condescending tone of Mr. Perry, with his vague depreciation and misapprehensions.

Another instance of the way in which Mr. Perry's philosophy colors his presentation of the facts may be seen in his account of what was accomplished by Wolf for the Homeric question. Mr. Perry cannot away with the word "genius." From time to time he turns aside to remind us all that there is no such thing; and he does this in that abrupt and casual manner which Mr. Matthew Arnold calls a lack of urbanity, a violence to the reader. It would be hard to gather from page 21 exactly what conception Mr. Perry had of Wolf's contention. In three different passages on that page it is implied that his opponents maintained the 'Iliad' to be "the work of a creative genius," and that somehow Wolf maintained the reverse of this proposition. It is needless to say that the question of genius was not in dispute at all. Wolf never thought of impugning the genius shown in the 'Iliad'; he lived half a century too early for the notion to enter his head. It is true he conceived of the 'Iliad' as the work of several poets, and, in so far, as a growth; but his express words are that "the greater part of the songs must be assigned to Homer, the poet who first took up the theme," and he speaks of "the divine force and breath of natural genius" which the original Homeric poetry displays. But Mr. Perry is probably here, as often elsewhere in his book, belaboring a man of straw, a creature of his own fancy. However, once Mr. Perry has entered his protest, he praises Homer as ordinary people do who still retain "the now vanishing idea of genius as an inspirer of literary composition." Indeed, he seems to lose the calm spirit of scientific criticism. "Homer first and almost alone," he says, "has seen nature"; and again, in a torrent of surprising metaphor, "The astounding brilliancy of the Greeks is here, as it were, in the bud, and we find it fascinated by the spectacle of the world in its newness before literature had left its trail of associations over the whole face of nature."

To this sample of Mr. Perry's critical quality we may append some apparently slight but suggestive slips. Deinarches, and Iotros (for Ister), may be due to the printer, "Kointos Smurnaios, or Quintus Smyrnaeus, as he is commonly called," rouses deep misgiving in the mind of the scholar; it is just as possible to speak of "Kaligolas, commonly called Caligula." "Orpheus is a pure invention, as mythical as his Sanskrit compeer, the ideal poet Rithu." "Rithu" is, of course, meant for Ribhu; but Ribhu was not "the ideal poet," he was a semi-divine artisan, inventor, and priest—a Daedalus rather than a poet; and it is not accurate to call either Ribhu or Orpheus "a pure invention." A good deal of misinformation on the duties of the Choregus is suggested in a few lines on page 231. Why, moreover, in a popular treatise, raise the mooted question of the origin of the Greek hexameter? Who knows positively "that the Greeks already possessed, in common with the rest of the Aryan family, a rudimentary measure out of which they developed this favorite form"? This theory has been strongly controverted of late by M. Kawczynski, in his elaborate treatise on rhythms, as is also the derivation of poetical rhythm from music, of which Mr. Perry says the origin is "not far to seek," meaning by this that we are to find it, with Darwin, in the inarticulate musical sounds of earliest man when influenced by love or some strong emotion. Most people would think this was seeking very far. Our point, however, is simply this, that in a popular history of literature such questions and digressions are a chase after will-o'-the-wisps.

Memoir of Jenny Lind-Goldschmidt: 1820–1851. By H. S. Holland and W. S. Rockstro. Scribners. 2 vols., pp. 458 and 506.

Perhaps no other profession contains so large a proportion of bunglers and charlatans as is

to be found among teachers of singing. Hundreds of promising voices are ruined every year by incorrect training of the vocal organs, and the result is a painful scarcity of good singers, and the consequent slow growth of popular interest in good music. Even Jenny Lind, who, taking everything into consideration, may perhaps safely be pronounced the greatest vocal artist that ever lived, had a narrow escape from coming early to grief, owing to an incorrect training of her voice. She was as precocious as some of the great composers, and she used to relate that her earliest distinct memory of childhood was how, one day, she crept to the piano and strummed out the fanfare that she had heard the military buglers play in the street. She was discovered by her grandmother, who, when her mother returned, exclaimed: "Mark my words, that child will bring you help." She herself wrote that "as a child I sang with every step I took, and with every jump my feet made"; and the audience for which she sang at that time was her pet cat.

"Her favorite seat with her cat," her eldest son writes, "was in the window of the steward's rooms, which look out on the lively street leading up to the Church of St. Jacobs; and there she sat and sang to it; and the people passing in the street used to hear and wonder, and amongst others the maid of a Mlle. Lundberg, a dancer at the Royal Opera-house; and the maid told her mistress that she had never heard such beautiful singing as this little girl sang to her cat. Mlle. Lundberg thereupon found out who she was, and sent to ask her mother, who seems to have been in Stockholm at the time, to bring her to sing to her. And, when she heard her sing, she said, 'The child is a genius; you must have her educated for the stage.'"

Her mother and grandmother had a prejudice against the stage, but consented so far as to allow her to appear before Singing-Master Croelius, who took her to Count Puke, the head of the Royal Theatre. That settled the matter. The vocal gem, once discovered, could not be lost sight of again; and as Jenny's mother was very poor, she was educated at the expense of the State, which also paid for her board while she remained with her mother. At this time she was nine years old, and at seventeen she was playing as a regular actress at the Royal Theatre at a fixed salary. Her talent as an actress was indeed fully as remarkable at an early age as her vocal skill, and to this early dramatic training she owed much of her subsequent success as an opera-singer. It was the part of *Agathe* in the "Freischütz" that first showed her the true sphere of her talent. "I got up that morning one creature," she used to say, "and went to bed another creature. I had found my power." And she always celebrated the 7th of March as a second birthday.

Her fame as an opera-singer now grew apace rapidly, and her reputation soon became national. But she had an instinctive feeling that though all Sweden was singing her praise, she still had much to learn before she could consider herself a perfect artist. So she resolved to go to Paris, at that time the musical centre of the world; and a wise move it was, of which a much longer postponement would probably have frustrated all her future triumphs. Her voice had been over-fatigued by a provincial tour, and she had never known how to take proper care of it; the result being that when she sang before Signor Garcia, she broke down, and the eminent teacher had to tell her frankly, "It would be useless to teach you, mademoiselle; you have no voice left." This was a terrible blow, but Garcia advised her to rest completely for six weeks, and promised then to reconsider her case. She did so, was subsequently accepted, and the result of the best voice in the world trained by the best teacher was the future Jenny Lind. But it was a narrow escape, for a few years—perhaps a few months—more of her unguided singing would have ruined her voice for ever.

This is not the place to enter into details regarding Signor Garcia's method of teaching his gifted pupil; but we earnestly recommend every student of vocal music to read this memoir, and to ponder especially chapter ii. of Book II. and chapter xi. of Book VIII., which contain more useful hints than a great many long treatises. They show, also, that Jenny Lind was willing to work patiently, and that in her case, as in that of so many others, genius was largely "an infinite capacity for taking pains." During her enforced idleness, while waiting for her voice to recover from its fatigue, she devoted her hours to learning Italian and French; and subsequently, when in Germany, she did the same with the language of that country, so that she finally could sing in these languages as well as in her native Swedish. And, unlike Patti, she was always most careful in pronouncing her text and not slighting shades of emotion in the poetry. While in Paris she also carefully studied the great actresses. The following brief note to Lindblad throws light on this, as also on her extreme modesty, which was real and not assumed:

"Shall I tell you my thoughts? The difference between Mlle. Rachel and myself is that she can be splendid when angry, but she is unsuited for tenderness. I am desperately ugly, and nasty too, when in anger; but I think I do better in tender parts. Of course, I do not compare myself with Rachel. Certainly not. She is immeasurably greater than I. Poor me!"

The reference to her own "ugliness" recalls what she wrote to the editor of a Swedish cyclopædia regarding her appearance before the Stockholm operatic director at the age of nine, describing herself as "a small, ugly, broad-nosed, shy, *gauche*, undergrown girl." She won her successes in spite of a lack of personal beauty, for which the expressive play of her features amply atoned; and as for the awkwardness to which she refers, that was overcome by careful study in the class-room even before she left Stockholm, so that her biographers could write that "her perfect walk, her dignity of pose, her striking uprightness of attitude were characteristic of her to the very last."

The one thing to be regretted in Jenny Lind's career is that she won most of her triumphs in an inferior class of operas—the works of Bellini, Donizetti, Rossini, and Meyerbeer—as is illustrated by her two seasons in Vienna, 1846 and 1847, when she appeared in opera thirty-one times, all but one of which were in Bellini, Donizetti, and Meyerbeer operas. This, however, was not her own fault, but that of the audiences, which at that time preferred these flimsy operas to those of Weber, Gluck, Mozart, and Beethoven. She sang altogether, during eleven years, 677 times in 30 operas, including most of those then famous, except "Fidelio." Inasmuch as "the rich, sustained tones of the *soprano drammatico* were far more congenial to her voice than the rapid execution which usually characterizes the lighter class of soprano voices," there can be no doubt that she would have felt happier on the operatic stage, and would not have left it twenty years before the close of her career for the concert stage, had she lived to-day, when operatic audiences have a higher taste for real dramatic music. When she did appear in a Weber, or Mozart, or Gluck opera, the effect was unrivalled, and she was also, what Patti could never aspire to be, a wonderful interpreter of the most poetic and melodious of vocal compositions—the German *Lieder*. On pages 389–391, vol. ii, are printed some letters by Clara Schumann, in which she states that Jenny Lind sang all of her husband's songs in the manner which she had pictured to herself as ideal, but in which she had never dreamed of hearing them sung. "Nothing escapes her, not even the softest harmonic change. I need scarcely mention that Robert is equally charmed with her; for a composer it is a special delight to hear his songs rendered as coming from the depths of his own heart. She left, and each time she left, I stayed behind in a state of intense excitement, her notes and words continuously quivering in my soul."

Nothing, indeed, is more noticeable in the records of Jenny Lind's life than the unqualified and enthusiastic approval bestowed on her by those supreme judges in music, the composers themselves. "But what remains for your friends to wish to say, for you whom heaven has so richly endowed?" wrote Meyerbeer. "It has given you that great and sympathetic voice which charms and moves all hearts; the fire of genius which pervades your singing and your acting." This composer even consulted Jenny Lind when writing his operas, over and over again (I., 221). Chopin wrote, after hearing her in London: "This Swede is indeed an original from head to foot. She does not show herself in the ordinary light, but in the magic rays of an *aurora borealis*. Her singing is infallibly pure and true; but, above all, I admire her *piano* passages, the charm of which is indescribable." But the most enthusiastic admirer among the composers was Mendelssohn, whose correspondence with the great singer fills up more than two chapters of this memoir, and who wrote: "She is as great an artist as ever lived; and the greatest I have ever known."

Enough has been quoted from this biography to show that it is a good thing. Indeed, the only fault that can be found with it is that it is too much of a good thing. The accounts of operatic triumphs in various cities could have been profitably reduced in number. There is a good index and a valuable twenty-four-page supplement, containing cadenzas and other passages used by Jenny Lind in her version of various famous songs.

The Memoirs close with the singer's retirement from the operatic stage, and therefore do not give an account of her marvellous doings in America under Barnum's management; but as there is already a volume covering that part of her career, the omission is pardonable. Special mention must be made, finally, of Mr. Rockstro's admirable remarks, in the seventh chapter of Book IV., on Weber's 'Euryanthe.'

Excursions in Art and Letters. By William Wetmore Story. Boston: Houghton, Mifflin & Co. 1891.

MR. STORY'S new volume is practically a supplement to the 'Conversations in a Studio,' and is made up of five papers none of which is particularly novel or attractive. The first three are upon Michel Angelo, Phidias, and the Art of Casting in Plaster among the Ancient Greeks and Romans, and these are somewhat elaborate, and have the exterior look of learning. The discussion of Phidias and of Plaster-casting is controversial, and is directed to showing in the one that Phidias was not a worker in marble, and should have no part of the credit for the Elgin marbles and other

sculptures of the Athenian age in this material, but that he used ivory and gold, and was a kind of Cellini on a grand scale; and in the other case Mr. Story concludes that plaster-casting was not known to the ancients. The latter portion of the volume is occupied with a religious discussion supposed to take place as an imaginary conversation between the author and Marcus Aurelius, and also with a criticism of "Macbeth." The religious essay belongs to a stage of interest in the subject which among persons of education is so far past as to have become merely historical, and we can see no useful purpose it can serve in the present day, when its touch of Voltairean crudity removes it from our intellectual sympathy. The paper upon the character of *Macbeth* and his lady is more attractive, and engages a certain interest by presenting a paradoxical view; it is always open to a writer on Shakspere to win attention by contradicting the accepted interpretation of the characters of the plays, and arguing in favor of the new conception with a plausibility which the nature of the subject permits, just as one can maintain that Judas was a martyr and Napoleon a myth. A similar value appertains to Mr. Story's reading of "Macbeth," though we would not be understood to imply that there is anything of such artifice in his argument as is in the Judas and Napoleon cases. The volume as a whole is narrow in interest.

Coast of Maine.

CAPE ROSIER.

The lands of the "Cape Rosier Associates" on Penobscot Bay, 50 miles nearer Boston and the West than Bar Harbor, Mt. Desert, are offered for sale in parcels of five and ten acres and upwards. These lands comprise over ten miles of almost continuous shore-frontage in one of the boldest and most beautiful sections on the coast, twelve hours' journey from Boston. They front upon fine harbors, have beautiful rocky shores, beaches, woods, and mountain views. The drives along the shores and among the hills are very varied and beautiful. New wharves have been built, and new connections with daily trains and steamboats established. In these lands is offered an exceptional opportunity to purchase for very small sums fine and perfectly protected seashore estates. The lands will not be sold for speculation or in small lots.

Coast of Maine.

CAPE ROSIER.

The lands of the "Cape Rosier Associates" on Penobscot Bay, 50 miles nearer Boston and the West than Bar Harbor, Mt. Desert, are offered for sale in parcels of five and ten acres and upwards. These lands comprise over ten miles of almost continuous shore-frontage in one of the boldest and most beautiful sections on the coast, twelve hours' journey from Boston. They front upon fine harbors, have beautiful rocky shores, beaches, woods, and mountain views. The drives along the shores and among the hills are very varied and beautiful. New wharves have been built, and new connections with daily trains and steamboats established. In these lands is offered an exceptional opportunity to purchase for very small sums fine and perfectly protected seashore estates. The lands will not be sold for speculation or in small lots.

THE POPULAR NOVEL,

JERRY. By S. B. Elliott. 12mo, $1.25.

Revised Edition, 140th Thousand.

OUR COUNTRY.

By Dr. JOSIAH STRONG.

Paper, 30 cents; cloth, 60 cents,

THE MOST POWERFUL BOOK OF THE CENTURY ON AMERICA.

This revision, which is based on the census of 1890, shows the changes of the last ten years, and pictures the religious, social, and economic conditions and tendencies of our country to-day, thus adding to the value of the earlier editions the merit of being the first general application of the revelations of the recent census to the discussions of the great questions of the day. The present edition has been printed from entirely new plates, and enlarged by the addition of more than one-third new matter. Diagrams have also been employed to illustrate some of the more startling facts and comparisons.

Sent postpaid on receipt of the price by

The Baker & Taylor Co.,

PUBLISHERS,

740 and 742 Broadway, New York.

An Idyl of the Sun.

By ORRIN CEDESMAN STEVENS.

12mo, cloth, $1.25.

"Does poetry consist in the ability to say pretty nothings in a more or less graceful manner, or does it have a higher source in what it used to be the fashion to call the imagination? If the former, not much is to be said for 'An Idyl of the Sun,' by Orrin Cedesman Stevens; if the latter, one is almost persuaded that he has discovered a *new poet*. For Mr. Stevens most certainly employs imagery of a strong and noble quality, and he writes lines that are charged with a profound and subtle meaning, and also lines that hold their place in the memory by the simple power of verbal felicity giving force to some large or deep-discerning view of human emotion, or external nature."—*Boston Beacon.*

"In 'The Common Man' there is a simple pomp like that of the eighteenth-century writers."—*Literary World.*

"It is a noticeable volume. 'The Wonderful Workman' and 'The South Winds' are poems that one cannot read in cold blood."—*Philadelphia Press.*

"The poems show a very marked individual imprint."—*Pittsburgh Leader.*

"His bent of mind is philosophical, but his best work deals with local themes, which he invests with sparks of poetic fire."—*Philadelphia Ledger.*

MISS ANABLE'S BOARDING AND Day School for Young Ladies and Little Girls. 43d year begins Sept. 28, 1891.

PENNSYLVANIA, Swarthmore.

SWARTHMORE COLLEGE OPENS 9th month, 8th, 1891. Thirty minutes from Broad Street Station, Phila. Under care of Friends. Full College Courses for both sexes leading to Classical, Engineering, Scientific, and Literary degrees. Healthful location, extensive grounds, buildings, machine shops laboratories, and libraries. For particulars and Catalogue, address PRESIDENT SWARTHMORE COLLEGE.

RHODE ISLAND, Prudence Island.

ALFRED HALL, SUMMER SCHOOL of English, French, and German. For circulars, address HIRAM ORCUTT, Manager, 3 Somerset Street, Boston, Mass.

VIRGINIA, Bellevue.

BELLEVUE HIGH SCHOOL.—THO- roughly equipped and of high grade, for boys and young men. For catalogue or information, address W. R. ABBOT, Principal.

GERMANY, Berlin.

THE AMERICAN HOME SCHOOL for Young Ladies offers to a limited number the protection and comfort of an American home, together with the chaperonage so necessary to young ladies studying abroad. The best masters in Music, Art, German, and French. Vacation trips to Russia, Italy, France, and through Germany. The school begins its sixth year September 16, 1891. Address for circulars Miss R. I. GILBERT, 161 Lasalle St., Chicago, Ill., or the Principal, Mrs. MARY B. WILLARD, Nettelbeck Str. 21, Berlin. Mrs. Willard refers by permission to Mrs. Grover Cleveland, and the Hon. William Walter Phelps, U. S. Minister to Germany.

UTICA CONSERVATORY OF MUSIC. —A Training-School for Music-Teachers, Utica, N. Y. LOUIS LOMBARD, Director.

Teachers, etc.

NORMAL SCHOOL GRADUATE (LA-dy) who has had full course in modern languages at first-class college, and has studied two years at foreign universities, desires good position for German or French. Speaks both languages fluently. Seven years' successful experience in teaching. Address D. G., care of *Nation.*

A COLLEGE GRADUATE DESIRES one or more boys to tutor during the summer months. Highest references. Address WILLIAM ESTY, Amherst Mass.

Teachers, etc.

B. A., LARGE GOLD MEDALLIST IN History and Economics (Dublin Univ.), double-first Honor and Prizeman, Exhibitioner, etc., with large experience and highest recommendation, is open to engagement as Professor of English, Mathematics, or Economics. HISTORICUS, *Nation*.

WANTED—FOR THE HEAD OF Classical Department in large Boarding School for Boys—A graduate of a leading college who has successful experience. Must be unmarried and an Episcopalian. Address, with full particulars, HEAD MASTER, *Nation*.

MATHEMATICS, PREPARATORY or Advanced.—A specialist will receive, during July and August, pupils desirous of rapid progress. Address A. B. X., care of the *Nation*.

A QUIET HOME IN BOSTON FOR A few young students, with a liberally educated lady. Private instruction if desired. Address M. S., Box 70, Studio Building, Boston.

F. S. STEBBINS, A.B., TUTOR, WILL make engagements for the summer. Address 46 No. Ave., Cambridge, Mass.

CHARLES W. STONE, *Tutor for Harvard*, 68 Chestnut Street, Boston.

School Agencies.

PROFESSORS *Wanted for the following* positions: 2 of Chemistry, $1,500 and $2,000; 2 of Physics, $1,500 each; 3 of Mathematics, $700 to $1,800; 2 of Geology, $900 to $1,500; 3 of Latin, $800 to $1,400; 1 of English, $1,800; 7 Music Directors, $800 to $1,500; 5 native Teachers (ladies) of French for Eastern Academies, $500 to $700. Address C. J. ALBERT, Elmhurst, Ill.

AMERICAN AND FOREIGN TEACHERS' Agency supplies Professors, Teachers, Tutors, Governesses, etc., to Colleges, Schools, and Families. Apply to MRS. M. J. YOUNG-FULTON, 23 Union Square, New York.

THE FISK TEACHERS' AGENCIES, 7 Tremont Place, Boston, Mass., 6 Clinton Place, N. Y., 106 Wabash Ave., Chicago, Ill., and 120½ South Spring Street, Los Angeles, Cal. 100-page Agency Manual free. EVERETT O. FISK & Co.

THE NEW AMERICAN TEACHERS' Agency supplies all grades of Teachers and Educators. Location near the centre of population of the U. S. Apply to C. B. RUGGLES, Manager, Room C, Palace Hotel Building, Cincinnati, O.

AMERICAN AND FOREIGN *Professors*, tutors, governesses, teachers, etc., supplied to Colleges, schools, and families. MIRIAM COYRIERE, 150 5th Av., cor. 20th St., N. Y.

SCHERMERHORN'S TEACHERS' Agency. Oldest and best known in U. S. Established 1855. 3 East 14th St., N. Y.

FRENCH TEACHERS and STUDENTS should send for free sample copy of "LE FRANCAIS" (*French Monthly*), Published by BERLITZ & Co., Madison Square, N. Y.

Hellmuth College

Education
Health
Home

For YOUNG WOMEN and GIRLS.

Large illustrated Catalogue sent on application.

Rev. E. N. ENGLISH, M.A., Principal,

LONDON, ONTARIO, CANADA.

New York College for the Training of Teachers,

9 UNIVERSITY PLACE, NEW YORK.

A Professional School for the equipment of College Graduates and others who combine ability, scholarship, and practical power. Information furnished on application.

Stern's School of Languages of N. Y. City,

29 East 44th Street.

GERMAN, FRENCH, SPANISH, ITALIAN, LATIN, GREEK.

"The Natural Method of Instruction in Modern Languages as used by Prof. Stern has met with remarkable success. This method is a benediction to the student."—*Christian Union*. "Stern's School of Languages is justly regarded as one of the very best schools of its kind."—*New England Journal of Education*.

Send communications to Bethlehem, N. H., until Sept. 1. Fall term commences Oct. 1. Special arrangement made for those who study to teach German and French.

Lake Erie Seminary, *Painesville, O.*—Buildings enlarged; increased opportunities for the liberal and thorough education of young women.

Thirty-third year begins September 16, 1891.

MISS MARY EVANS, PRINCIPAL.

Exhaustion

HORSFORD'S ACID PHOSPHATE.

The phosphates of the system are consumed with every effort, and exhaustion usually indicates a lack of supply. The Acid Phosphate supplies the phosphates, thereby relieving exhaustion and increasing the capacity for labor. Pleasant to the taste.

Dr. A. N. KROUT, Van Wert, O., says: "Decidedly beneficial in nervous exhaustion."

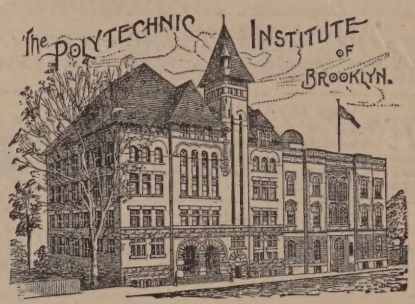
Dr. S. T. NEWMAN, St. Louis, Mo., says: "A remedy of great service in many forms of exhaustion."

Descriptive pamphlet free.

Rumford Chemical Works, Providence, R. I.

Beware of Substitutes and Imitations.

CAUTION: Be sure the word "Horsford's" is printed on the label. All others are spurious. Never sold in bulk.



Polytechnic Institute of Brooklyn.

Institute Courses in Arts, Chemistry, Civil and Electrical Engineering, for the Degrees of Bachelor of Arts, Bachelor of Science, Civil Engineer, and Electrical Engineer.

Academic Department preparatory for the Institute, for other Colleges, or for Mereantile career. Gymnasium, swimming-baths, etc. Completely equipped. Fall Term begins Sept. 16, 1891. For Catalogue address DAVID H. COCHRAN, Ph.D., LL.D., President, Brooklyn, N. Y.

ILLINOIS, ROCKFORD.

ROCKFORD SEMINARY FOR YOUNG WOMEN

43rd year. Full College and Preparatory Courses. Superior advantages for Music, Painting and Drawing. All departments in charge of Specialists. New Science building. Best advantages for Scientific Study and Investigation. Four well equipped Laboratories—biological and botanical, physical, chemical and mineralogical. Special inducements for teachers who wish to take advanced work. Resident Physician. Fine Gymnasium (40x80 ft.) Sargent System. Delicate girls show marked gain in strength while pursuing regular course of study. A new cottage offers students opportunity to reduce expenses to lowest rates. Catalogue gives full particulars as to entrance examinations. Correspondence invited. Lock Box 204. SARAH F. ANDERSON, Principal.

LAW SCHOOL.

WASHINGTON AND LEE UNIV., LEXINGTON, VA. C. A. Graves, Prof. Com. and Stat. Law; J. Randolph Tucker, Prof. Equity and Constitutional Law, etc. Opens Sept. 10. For Catalogue, address G. W. C. LEE, President.

ENGINEERING SCHOOL.

WASHINGTON AND LEE UNIVERSITY. Civil, Mechanical, Mining, Electrical. Address D. C. HUMPHREYS, Lexington, Va.

HATCHARDS.

This is the favorite BOOKSTORE, and for 100 years the resort of the smartest people in London. It is visited and patronized by all who love books. London is the great market for books, and all the best as well as the cheapest editions can be had by writing to us. Special collections formed, and fuller information supplied than from any other house. Books both old and new, and relating to any subject, can readily be supplied at very moderate prices.

Agents for Clubs, Libraries, and all private Collectors.

187 PICCADILLY, LONDON W.

Wilson College for Young Women,

CHAMBERSBURG, PA.

$250 per year for board, room, and all college studies, except music and art. Large Music College and Art School; full Faculty; College Course B.A.; Music College B.M. Handsome park, large buildings, steam heat, gymnasium, observatory, laboratary, etc. Rev. J. EDGAR, Ph.D., President.

ROANOKE COLLEGE,

SALEM, VA. 39th Year.

Choice of Courses; Commercial Department; Library, 17,000 volumes; working laboratory; good morals; healthful mountain climate. Expenses for 9 months, $154 to $204 (board, fees, etc.). Young men from many States, Indian Territory, Mexico, and Japan. Illustrated catalogue and illustrated book about Salem free. Address JULIUS D. DREHER, President.

Vanderbilt University.

Ten Fellowships, $100 each, with free tuition, open to graduates wishing to pursue higher courses.

Address WILS WILLIAMS, Sec'y, Nashville, Tenn.

WELLS COLLEGE FOR WOMEN, AURORA, N. Y.

Three Full Courses of Study. Location beautiful and healthful. A refined Christian Home. New Building with Modern Improvements. Session begins September 16, 1891. Send for Catalogue. E. S. FRISBEE, D.D., President.

UNIVERSITY OF VIRGINIA.

Session begins Oct. 1. Extensive courses of instruction and ample equipment in *Letters* and *Science*, *Law*, *Medicine* and *Pharmacy*, and *Civil*, *Mining*, and *Mechanical Engineering*. Apply for Catalogue to WM. M. THORNTON, Chairman, Univ. of Va., Charlottesville, Va.

COLLEGE OF PHYSICIANS AND SURGEONS,

BALTIMORE, MD.

Send for a Catalogue to THOMAS OPIE, M.D., Dean, Cor. Calvert and Saratoga Streets.

THE OHIO UNIVERSITY

AT ATHENS does college work exclusively. Electives in Biology, Electricity, Elocution, Greek, Latin, etc. Special course in Pedagogy leading to degree. Tuition $30 per year. First class graduated in 1815. CHAS. W. SUPER, President.

THE CLAVERACK COLLEGE

And HUDSON RIVER INSTITUTE

For Boys and Girls, will open its 38th year Sept. 14. For catalogues, address Rev. A. H. FLACK, A.M., Prest., Claverack, N. Y.

School of Drawing and Painting,

AND DEPARTMENT OF DECORATIVE DESIGN, MUSEUM OF FINE ARTS, BOSTON.

For circulars and detailed information apply to the manager.

RIVERVIEW ACADEMY, POUGHKEEPSIE, N. Y.

56TH YEAR. Prepares thoroughly for College, the Government, Academies, and Business. Military Organization. BISBEE & AMEN, Principals.

THE BOSTON SCHOOL OF ORATORY.—The Leading School of Expression in America. First to teach the System of Delsarte. Send for catalogue to MOSES TRUE BROWN, M. A., Boston, Mass.

Foreign Books, Subscription to foreign periodicals, Tauchnitz British Authors. Catalogues on application. CARL SCHOENHOF, 144 Tremont St., Boston.

MONUMENTS

Set in any part of United States. Send for Circulars. J. & R. LAMB, 59 Carmine St., N. Y.

The Nation.

NEW YORK, THURSDAY, JULY 9, 1891.

The Week.

THE change in the form of the Treasury statement adopted by Secretary Foster consists mainly in the relegation of the greenback-redemption fund of $100,000,000 gold to the general resources of the Government, instead of a special fund set apart for a special purpose. This change is of no great importance except as a symptom of the state of mind prevailing at headquarters. This state of mind is certainly wrong if regard is had to the intention of Congress in creating the one-hundred-million fund, for that intention was clearly set forth in a debate in the Senate on the 21st of June, 1882, when the rather blind paragraph relating to this fund was enacted. The paragraph reads in this way:

"That the Secretary of the Treasury shall suspend the issue of such gold certificates whenever the amount of gold coin and gold bullion in the Treasury reserved for the redemption of United States notes falls below one hundred millions of dollars."

The history of this clause is as follows: It was introduced by Senator Aldrich at the date above mentioned as an amendment to the National Bank Act of that year, and the object was, as stated by the members of the Finance Committee, to prevent the holders of greenbacks from drawing gold from the Treasury and redepositing it and taking gold certificates instead; or rather it was to put a limit to that operation. Whenever the Treasury gold should be reduced to one hundred millions, this operation should be no longer possible, although of course there was no limit to the amount of gold that could be drawn by the holders of greenbacks for their own use, or for deposit in bank or in their own private vaults. They would not be allowed to use the Treasury vaults for the safe-keeping of the gold so drawn.

This amendment brought up for the first time the question, What is this hundred-million gold fund anyway; where did it come from, what was it intended for? Senator Allison said that it was a fund specially accumulated for greenback redemption, and he asked Senator Sherman, who, as Secretary of the Treasury, had accumulated it, whether that was not the fact. Mr. Sherman replied in the affirmative. The exact amount of bonds sold for this special purpose was $95,500,000. The Secretary was authorized by the Specie Resumption Act to do this. When this was clearly brought out, Senator Ingalls was struck by the fact that there was no provision of law clearly indicating that the $100,000,000 gold which had been obtained by a special issue of bonds for the redemption of greenbacks was *reserved* for that purpose. Such remissness, he said, was "radically and absolutely wrong." To meet the *casus omissus* he proposed to insert the words "*reserved* for the redemption of United States notes," in place of the words "*available* for the redemption of United States notes," as Senator Aldrich had prepared his amendment. The matter was debated through four pages of the *Congressional Record* of the date mentioned (pp. 5,165–5,169), at the end of which, everybody being perfectly informed of the character and object of the amendment, Mr. Ingalls's motion was adopted without a dissenting vote, and the Aldrich amendment as amended was adopted by a like vote. This history shows with sufficient clearness that Secretary Foster's state of mind touching the legislative intendment of the act of 1882 is wrong. Treasurer Jordan was right in putting the $100,000,000 gold fund in a special place in the monthly statement of assets and liabilities.

For upwards of eleven years, ever since Secretary Windom put the Treasury bookkeeping into business-like form, the daily statement has specified the amounts of gold coin and bullion, silver coin and bullion, United States notes, and fractional coin held by the Government, and the certificates outstanding against them, together with the account of Government deposits in national banks. This furnished material for an accurate and ready computation of the actual situation of the Treasury. When the purchase of silver under the act of July 14, 1890, was begun, the account of silver held under this law was introduced, with a record of Treasury notes outstanding against such bullion. Last Friday's statement broke away from all these business-like precedents, and undertook to lump together in one item the entire Government account in silver, comprising not only the dollars and bullion accumulated under the Bland law, but the trade-dollar bars which are not yet melted up and recoined. Distinction is no longer made between these separate accounts, though they actually tell the history of three radically different experiments in Government coinage. It is impossible, from the figures presented, to strike balances which tally within several millions with the balances of the last statement under the old form. This simply means that hereafter no citizen is to have the opportunity of knowing how much silver bullion has been accumulated under last year's act, or what is the increase or decrease in the older stock of standard dollars. If there should be a sudden and startling change in the net Treasury balance on the silver account, we must take the word of Treasury officials as to its real nature and cause. The public statement will tell us little or nothing. This juggling with the books has secured on the face of the reports an increase in the surplus of six to seven millions, and, apparently, Secretary Foster cares for nothing else. In business circles, men with peculiar ability for creating abnormally large surpluses by manipulation of the bookkeeper's accounts are looked upon with profound suspicion.

The failure to put Prof. Nipher, of the chair of physics of Washington University, Missouri, in charge of the Weather Bureau, as appears to have been practically settled, was preceded by a very remarkable telegraphic correspondence, which ran as follows:

"WASHINGTON, D. C., June 29.

"*Prof. Francis E. Nipher:*

"What are your politics? Answer by telegraph.

"——, Secretary of ——."

To this Prof. Nipher telegraphed:

"Replying to your telegram as requested, I respectfully state that I am not a politician and do not intend to engage in politics."

The result, apparently, of this was that Mr. Mark Harrington, the editor of the *American Meteorological Journal*, got the place. We must say we think Prof. Nipher's answer was, from a worldly point of view, a very ill-judged one. He ought to have answered somewhat in this way:

"*Secretary* ——, *Washington.*

"Have been meditating so much during the last six weeks on the farmer that I have had but little time to follow current political events. Am a firm believer in such protection for the national industry as will secure to the laborer the fruits of his honest toil and an abundance of leisure, to the capitalist a reasonable profit on his investments, and to the farmer, a market close to his house, but with very cheap transportation to distant markets should he prefer them. Believe strongly in making foreign importers pay the duty on all foreign importations, so that the price shall not be raised to the domestic consumer, but am in favor, also, of making the domestic consumer pay a sufficiently high price for his commodities to preserve his self-respect and that of his family and poor relations. I firmly believe, also, that the manufacture of American tin plate is being carried on extensively in various places in this country, which, however, on public grounds, I decline to name or describe more specifically. I am in favor of the circulation of all the gold and silver money the mints can coin at par, and despise the variations in the value of those metals reported from monarchical countries by interested parties. The slanders on eminent public men now current in a neighboring State excite my deepest indignation, and I cordially hate Mugwumps, and have not for many months admitted one to my house. Should I be put in charge of the weather, I shall give my best endeavors to making it suit the farmers of all sections, being well aware of the indifference to their just demands hitherto shown by the so-called meteorologists.

"FRANCIS E. NIPHER."

From the time that Bardsley, the thieving City Treasurer, appeared in court and read a confession which confessed nothing, there have been rumors in Philadelphia that he had at first prepared a confession which was a very different kind of document, but had been induced by powerful influences of some kind to suppress it. Mr. McKean, the editor of the Philadelphia *Public Ledger*, has admitted that the supression took place in his

office. He says that he received no "confession" from Bardsley, but merely a "statement," and that, "instead of being a paper that would be of service to the public, it was a repetition of accusations and scandals against reputable persons upon no better authority than two witnesses wholly unworthy of credit—John Bardsley and Gideon Marsh—and in large part hearsay testimony at that." He adds that it is the *Ledger's* habit to "decline to publish scandalous attacks upon individual character upon any such testimony," but that if the Investigating Committee desires him to appear before it, or to place the statement in its hands, he is ready to do so. We observe that the other Philadelphia newspapers are inclined to the view that the document will not only have to be handed to the Committee, but to be published in full, because its suppression is breeding suspicions far more damaging than its contents are likely to prove.

It looks very much as if the so-called Citizens' Republican Association of Philadelphia, which started out a few weeks ago with the avowed purpose of driving from the Republican party "all that is bad, dishonest, and wrong," were a bogus reform movement in the interest of Senator Quay. We had grave suspicions of its character when one of its leaders made haste to explain that the movement was not directed against any particular person, but was designed to secure reform on broad general lines. That is the kind of reform movement which all political rascals are warmly in favor of. Now the Secretary of the Association goes a step further in broadening the scope of the organization by declaring that it "has nothing whatever to do with the movement against Quay" which took such a formidable shape a few days ago. "We," says the Secretary, speaking officially, "are not striking at any individual. We will direct our efforts to bringing about reform within the party lines." That is to say, they will stay within the party lines with Quay, and submit to his leadership without question when he shall have gone through the easy and familiar process of ignoring their wishes in the primaries and nominating conventions. "Reform within the party" is the kind of opposition which the Quays of every party most delight to see.

The action of the Iowa Republican Convention last week simply emphasizes the position previously taken by the Democrats, viz, that the campaign of this year must turn on the State issue of prohibition and the national issue of McKinleyism. The silver question and other issues are touched upon in the platform of each party, but none of them will count for anything. As regards what is rightly called "the conspicuous issue in the State campaign this year," the Republicans endorse prohibition, but the party cannot be held solidly to support a ticket which stands for the maintenance of the law. No less than eighty-four members of the Convention, with a member of the State Senate as one of their spokesmen, stood up to be counted against this plan and in favor of a substitute resolution declaring for local option and high license. Some of the Republican newspapers will work openly for the election of an anti-prohibition Legislature. The Keokuk *Gate City*, for instance, said the other day: "We should prefer a local-option platform, but we do not expect to get it. We and other Republicans hereabout will try and repeal prohibition if we can." In another editorial article upon the same subject, the *Gate City* says: "If there is prohibition in any shape in the Republican platform, it means that several thousand Iowa Republicans who have not yet voted against the party will do it this time."

All this goes to sustain the judgment expressed by the Des Moines *Register* last December, that "the Republicans of Iowa must contest the next campaign on national issues, or defeat is certain." In other words, they are foredoomed to defeat if the State issue of prohibition controls the casting of the votes, because a majority of the voters are opposed to the policy which the Republicans promise to maintain. But can they carry the State if they convince the voters that they ought to cast their ballots with reference to the national issue of McKinleyism? That remains to be determined. An incident of no little significance for its bearing upon this question occurred in the recent Henry County Republican Convention. Resolutions were introduced which said, among other things: "We endorse the doctrine of home protection in the interests of agriculture and labor in all its departments, and recognize the McKinley law as the ablest expression of the principles of protection, and we pledge ourselves to its support." But the convention was in no mood to accept such a deliverance without question. Says the report in the Burlington *Hawkeye*, a Republican organ: "Mr. W. R. Cole, one of the clearest-headed Republicans, objected to binding themselves to the McKinley law. He was in favor of protection, but the method of bringing it about was a debated question, and the McKinley method might possibly fail. He preferred protection to McKinley." Mr. Cole's substitute resolution was lost, but the really important fact is that "one of the clearest-headed Republicans" openly opposed the endorsement of McKinleyism. In last year's Congressional elections 185,783 voters in Iowa supported the McKinley policy, while 194,832 opposed it. The question this year, if the election can be made to hinge upon that issue, is whether McKinleyism has gained ground during the interval. Whatever the result, an "educational campaign" of the sort that benefits the people is certain.

When the advocates of the admission of Idaho as a State were presenting their arguments in Congress, a year ago last spring, the lowest estimate as to the population of the Territory which they would admit was 120,000, exclusive of the 4,500 Indians. Mr. Dubois, then the delegate from the Territory, and afterwards elected Senator from the State, declared it "certain that the population is somewhere between 120,000 and 140,000 persons, and between those limits it must rest till the new census shall be taken." The Census Bureau on Thursday gave out the official figures, and the number of inhabitants proves to be only 84,385. As the population in 1880 was nearly 33,000, the gain has been at the rate of only about 5,000 a year, a rate at which it will be nearer 1900 than 1890 before the total reaches the lowest estimate put forward by the advocates of admission last year. However, if it never rises above 84,385, there will be as many United States Senators from the State as from New York or Pennsylvania.

Bad as is Idaho's case, the condition of Nevada is far worse. The population of that sage-brush tract, according to the new census, is only 45,761. As there were 62,266 inhabitants in 1880, there has been a loss of more than one-fourth during the decade. Between 1870 and 1880 there was a slow growth from 42,491 to 62,266, but the total is already back nearly as low as in 1870, and there is no telling but it may continue to fall until it sinks to the 6,857 of 1860. No matter how far it sinks, however, there will always be two United States Senatorships for San Francisco millionaires to buy at private sale.

The reverence with which the McKinley tariff is regarded by the protectionists very nearly equals that entertained by the followers of Mohammed for the Koran. The more preposterous the absurdities, the flatter the contradictions, the greater the exhibition of faith on the part of true believers. The latest deliverance of the New York *Tribune* upon the subject of the duty on linseed oil is a very good example of this *credo quia impossibile* kind of political religion. The duty upon this article was increased in spite of the existence of a Trust; the duties upon sugar, upon steel rails, and upon steel beams were decreased because of the existence of Trusts; but the infallible tariff works out its beneficent end of cheapness for the consumer with equal certainty in every case. The increased duty upon linseed oil sent down the price; the decreased duties upon sugar and steel rails also sent down the prices. The *Tribune* confesses with penitence that in a moment of weakness it doubted if it were wise to increase the duty upon linseed oil—not that it questioned the inspiration of the tariff, but because it was apprehensive of the outcry of monopoly from unbelievers. But an overruling wisdom decreed that the duty should be increased, and now the *Tribune* declares, with contrite tears, that it will no more venture to make use of fallible human reason in criticism of the sacred and supreme authority. According to its belief, any measure enacted by a Republican Congress is perfect. Everything inconsistent with it is false. Everything added to it is superfluous.

Switzerland has been slow to learn that the appetite for protection grows with eating, but the lesson is at last being brought home with considerable force. When, in the tariff of 1884, the Federal Government first departed from the economic policy which it had pursued until then, it simply paved the way for demands which have since been growing louder and louder. Three years later the protected interests succeeded in saddling greatly increased duties upon the country, and on the 14th of April last a new tariff was adopted increasing the duties on the necessaries of life, such as coffee, sugar, butter, eggs, lard, etc., to such an extent as to lead to the formation of a league whose object it is to prevent the obnoxious duties from going into force. This may be accomplished by resort to the *referendum*, that safeguard by which any new law may, on the demand of 30,000 citizens, be submitted to popular vote, and almost at the eleventh hour—for the appeal must be made within three months from the adoption of any measure—the League decided to collect the necessary signatures. That it was not sooner induced to take this action was due to the pressure exercised on all the political parties of Switzerland by the impending commercial treaties with Germany and Austria-Hungary, the negotiations for which it was hoped would be concluded by the end of May. In reality, however, these negotiations were almost brought to a stand-still by the very tariff expressly framed to further them, in the expectation of exacting more favorable terms from Germany and Austria-Hungary by the threat of onerous duties on the imports from these countries.

The outcome of the appeal to the *referendum* ought not to be doubtful, if the laboring classes can be made to see that the taxes on the necessaries of life, including clothing, have increased five-fold since 1884, without a corresponding increase in wages. In fact, the increase of taxation in Switzerland during the last thirty years, in proportion to the increase in population, has been entirely out of keeping with the traditional reputation for economy which Switzerland enjoys. Prof. Georg Schanz, in his work on 'The Development of Swiss Taxation since the Beginning of the Nineteenth Century,' has shown that republican Switzerland, in spite of its almost total freedom from military burdens, has in the increase of taxation outstripped Prussia. Thus in 1851 the taxes in Prussia amounted to 10.76 marks per head, and in 1884 to 30.12 marks, whereas in Switzerland the taxes were 7.9 francs per head in 1856 and 37.3 francs in 1886. The agitation carried on in Germany against the retention of the corn duties has undoubtedly stimulated the zeal of the Swiss League; and now that the eyes of the laboring classes are being opened to the benefits of protection, the agrarian associations, both in the east and west of Switzerland, are likewise beginning to repudiate the alliance with the protected interests which the latter have so assiduously cultivated.

France is following the example of Germany and Switzerland in framing laws regulating the manner of paying the wages of factory hands. The French Government intends to embody in its project the Swiss feature of semi-monthly payments, and to limit deductions for fines, or for the purpose of guaranteeing employers against uncalled-for stoppage of work, etc., to three-tenths of the amount due the laborer. In Germany, factory wages are paid indifferently weekly or bi-weekly, and in some establishments only once a month; and deductions for any cause whatever are limited to the amount of one week's wages. In both Germany and Switzerland the principle of these regulations is being attacked by the labor parties, and in the former country the Social Democrats based their opposition to the law for the protection of workingmen on the ground of its involving a recognition of the right of the employer to retain any part of the stipulated wages. It will be interesting to watch the fate of the French measure in the Chamber, and to note the attitude of the French laboring classes towards regulations which, in spite of their adoption in Switzerland, have hitherto been pointed to as opposed to the spirit of liberal institutions.

The recent session of the Prussian Landtag was one of the longest and most fruitful on record, and has had the general approval of the press. According to the Constitution, the deputies must be convoked between November 1 and January 15 of each year. Under Bismarck the session commonly began as late as possible. The excuse was that the financial relations of Prussia to the Empire made it difficult to legislate till the imperial budget had been made out. In other words, the deputies did little save to pass routine appropriations. The Minister found it more convenient to administer the Government without their assistance. The new Ministry was diligent during the summer, and, although it had been in office but seven months, it was able to lay before the Landtag on November 21 a scheme of legislation so comprehensive that it might almost be called a programme. In delicate but unmistakable terms it was intimated that much had been neglected in recent years, and that the houses must make up for lost time. Of the many bills introduced, three principal ones proposed a reform of the system of primary schools, a change in the income and other taxes to pave the way for the eventual transfer of the land tax to the local units, and a plan to make possible the abolition, by administrative measures, of the pocket boroughs in the seven old provinces. The School Bill met almost universal opposition, though on very different grounds from different factions, and lies over the session. The tax reform was adopted with some modifications, and the Communal Regulation Act, in spite of persistent obstruction by the conservative elements, finally went through both houses. This law, which carries out, virtually on the lines that Stein proposed, a reform begun by that statesman more than eighty years ago, is naturally displeasing to the representatives of the country landholding interest. In the eastern part of Prussia, where the influences of feudalism are still distinctly discernible, there exists a system of farm communes (*Gutsgemeinde*). These communes, although as independent as the towns, stand under a local Government administered almost exclusively by the owner of the estate as communal magistrate. Many of them are of pigmy size, and even if, as a rule, they have not been badly governed, the owner, nevertheless, possesses almost absolute power over his peasants, and the nature of the relation is contrary to the fundamental principles of Prussian administration.

Above the chorus of approval with which the leading journals of Germany, Austria, and Italy greet the renewal of the Dreibund rises the protesting shriek of the Ultramontane *Osservatore Romano*. Its mournful utterances over the isolation of France are marked by the same want of reserve which has been noticeable of late in its columns, and particularly in a recent article predicting a miraculous alliance between the true Church and the Christian Democracy of France. This prediction went far to justify the apprehensions expressed by Signor Crispi in a speech delivered at Florence last October, as to the outcome of the Radical agitation against the Triple Alliance. His argument that the Radicals were in reality serving the ends of the Church was then indignantly characterized as a slander by democratic orators and journals, as well as by clerical papers. Significantly enough, however, on the very day when the *Osservatore* proclaimed the solidarity of interests between the Church and the French Republic, the Democratic Association of Rome issued a manifesto condemning the Dreibund and calling on the people to decide between armed misery and "sovereign liberty." The appeal was to have been followed by a series of public meetings protesting against a renewal of the Dreibund, which, however, were promptly prohibited by the Ministry. It ought to be said that both in the camps of the Clericals and of the Radicals may be found critics who regard the utterances of the *Osservatore* and the Irredentists as ill-timed. Thus, the radical *Tribuna* fears that the attitude of the Democratic Association may cast doubts on the sincerity of its motives, inasmuch as the agitation against the Dreibund, to be effective, ought to be carried on by all the political parties of Italy. And the outspokenness with which the *Osservatore* disclosed the inmost thoughts of the Vatican has even given rise to the suggestion that possibly a friend of Crispi's succeeded in smuggling into its columns the article bearing out the assertions of his Florence speech.

BUSINESS FAILURES IN 1891.

MESSRS. R. G. DUN & Co. publish the statistics of business failures for the six months just ended. The number who failed was 6,074 for the United States, as compared with 5,385 for the same period in 1890. Liabilities in 1891 were $92,416,000, and in 1890 $65,319,000, an increase in number of traders of 689 and in liabilities of $27,000,000. In the list given are many States which show fewer failures than last year: New York, Illinois, Iowa, Michigan, and Minnesota especially so. The cities of Chicago, St. Louis, San Francisco, and New York also show a cleaner record. For these States and cities we may conclude that, in spite of our last winter's stringency, business has been conducted on a conservative basis with a reserve of financial resources. Boston, indeed, shows greater losses than last year, but much less than in 1889. More interesting is the following table of States whose failures the present year are larger than in the corresponding six months of 1890 and 1889:

States.	Amount of liabilities.		
	1891.	1890.	1889.
Alabama.....	$1,386,063	$523,050	$468,317
Arkansas.....	1,365,933	544,384	352,100
Connecticut....	1,745,991	828,894	866,972
Georgia.....	3,074,360	362,930	689,376
Kentucky.....	3,200,981	708,966	701,929
Massachusetts..	3,897,207	1,642,523	2,565,110
Mississippi.....	914,481	591,164	289,374
Missouri.....	9,232,045	1,089,923	736,620
New Jersey	3,153,537	805,184	541,129
City of Cincinnati.....	1,032,406	544,026	376,764
Oregon.....	431,000	244,500	93,700
City of Philadelphia.....	8,942,309	3,651,227	4,220,912
Tennessee.....	3,567,075	683,061	613,351
Texas.....	3,393,762	885,037	1,464,590

The Kansas failures in 1891 are not much larger than in 1890, contrary to the general impression, nor are those in Nebraska much greater. Dun's Kansas City report on this point says "a considerable portion of the revenue from the abundant crops will be absorbed in clearing away mortgage debts; still, the belief is that the residue will be amply sufficient to sustain an increasing commercial trade." A glance at the table shows the main losses to be in the Southern States. There must have been hard times in Georgia, Kentucky, Missouri, Tennessee and Texas, since the liabilities for 1891 exceed so greatly those in the two previous years. Dun's circular is accompanied by reports from all the business centres of the country. Their tone is generally hopeful because of the abundant crops in prospect and the expected demand for our cereals abroad. But in the Southern States just mentioned the reports, while not at all pessimistic, still point out the need of caution. Nashville, for example, says: "Collections have been on the whole poor and money hard to get. Farmers have been poor and the country merchant cramped. There is a conservative feeling all along the line." In the same way Louisville reports the worst past and the outlook for the future brighter.

In the cotton States the fall prices for that staple are awaited with some anxiety. Augusta, Ga., reports, "A decrease in values [of cotton] might be attended with serious consequences to those country merchants who are carrying the farmers; still, prospects are considered good." From all points come the reports that the farmers are carrying over large quantities of cotton—a dangerous experiment in view of the expected large crop this year. Thus Savannah says: "In two counties there are at least 2,000 bales of last year's production yet unsold. These will have a tendency to glut the market if not got rid of previous to baling the new crop." Added to this is the increased price which Southern farmers must pay for Western grain not raised by them. Mobile reports: "Some regard the coming season as one fraught with more danger than usual because of the large amount of grain required by the farmers throughout this section."

The South is still laboring under the disadvantages and dangers growing out of its dependence upon one crop. Low prices received for cotton, and high prices paid for corn and other commodities not grown or produced, make a very unfavorable combination. The holding over of cotton or other farm products by the farmers seems to have been done by the advice of the Farmers' Alliances, which issued circulars recommending that course in order to compel the factors to pay more to the farmers. The best advice to farmers would be to sell their products soon after harvesting. Farmers are not capitalists in the business sense of the word, and are not well enough informed upon the general conditions which enter into the question of future values, to make a success of speculating. In the competition of capitalists for their product lies the farmers' hope of getting the highest price that trade conditions will permit. For the farmer who harvests in a month the whole supply of cotton or wheat for the year, the question of value for his crops six months hence is one of great importance. Since this value so far in the future is a matter of opinion wherein men will differ, there must of necessity be speculation; yet this speculation becomes the direct means of giving the producer at harvest a larger price than the immediate consumptive demand would warrant. There is, no doubt, too, that the system of borrowing in the South is enormously wasteful, compelling the farmer to pay practically such high rates of interest as to half ruin him when prices for cotton rule low. No business could long stand it, and cotton-raising cannot. Still, hard as it is to say so, there seems no real remedy except through failures, by which the business may fall into hands financially strong enough to follow it successfully.

Aside from the States mentioned, Connecticut shows increased losses, Massachusetts still more, and New Jersey very large liabilities. Certain lines of manufacturing in New England seem to be unsuccessful this year for causes not yet fully stated. Boots and shoes and rubber goods are examples. Hartford, Conn., reports, "The general tone of business has been of a rather depressing character, though a good deal of inquiry among prominent manufacturers and others has failed to reveal any good reason for the disappointment which is freely admitted." The New Haven report thus fairly sums up the general feeling regarding the business outlook: "Business men are not inclined to view with alarm the present somewhat depressed condition of trade. Though business as a whole is not quite up to last season at this time, a general feeling of confidence and satisfaction seems to be shared by all."

THE NEW PRUSSIAN INCOME TAX.

IN the brief speech from the throne with which the King of Prussia recently adjourned the Landtag, he thanked the members emphatically for accepting so many of the new Ministry's measures, and especially for laying "necessary and excellent foundations for the improvement of the tax system," which is to achieve "a just distribution of the public burdens according to ability to bear them." Nevertheless, of the three parts in which Dr. Miquel's tax-reform scheme was laid before the Deputies, they refused the inheritance tax outright, they largely modified the income tax, and allowed only the tax on trades and industries to go through approximately in the same form in which it had been presented by the Government.

The first assessment for the income tax under the new law will take place in 1892. The mode of assessment is substantially as follows: The communal magistrate (*Gemeindevorstand*) makes a list of all taxable persons in the commune, and estimates, from such data as he can obtain, the income of each. This list is revised and corrected by a board of provisional assessment (*Voreinschätzungscommission*), consisting of the magistrate as chairman and a number of assessors, the majority of whom are elected by the town, the minority appointed by the Minister of Finance. The lists, thus corrected, go to a board of county (*Kreis*) assessors, also composed of a majority of elected and a minority of appointed members, who hold office for six years and are eligible for any number of successive terms. In addition to the corrected assessment-roll furnished by the communal assessors, the county board has another source of information, viz., the direct declaration of the taxpayer himself. Each taxpayer who has an income of 3,000 marks or more, must fill out an official blank giving the amount of his income from each of four sources: capital, real estate, and rent (including the rental value of his residence if he owns it), trade and industry, earnings from professional or other occupation, so far as they are not already included in the first three classes. He must also specify the amount of his income from property or industry situated outside the *Kreis*, and the amount of the debts or the other burdens on account of which deductions from the assess

ment are expected. After comparing these declarations and the provisional assessment-rolls with its own knowledge of each taxpayer, the county board makes definitive assessments. The aggrieved taxpayer may appeal, as may the chairman of the Board, to a special tax court.

Thirty-six such tax courts are formed, one for each department (*Regierungsbezirk*). A majority of their members are chosen by the Executive Committee of the elected provincial Legislature from among the citizens of the Department, and a minority, including the chairman, are appointed from Berlin. From these tax courts there is an appeal to the Superior Administrative Court, the tribunal of last resort in cases involving the official conduct of a member of the civil service. All persons concerned in the assessment take an official oath of secrecy, and the records of the boards are inaccessible save to officials who have taken this oath.

How this mode of assessment would have worked if the rate of taxation had not been raised, is difficult to say. It might have worked well. Prussians are already accustomed to an income tax. They surrender willingly to officials much that an American considers very decidedly his own business. Respect for public officers is, justly, with them much greater than under the dominion of the spoils system; and to be convicted of tax-dodging by means of a direct lie, instead of being considered a praiseworthy evidence of "smartness," would be a social disgrace. In addition, the legal penalty for being caught in an untruthful declaration is high, and the probability of its enforcement is great. These inducements to honesty might have been sufficient, at the old accustomed rate of 3 per cent. as maximum tax, to improve the present assessment, perhaps to improve it largely.

But a way lay open to make assessment by declaration substantially just. Had the Government, at the same time that it made false declaration dangerous, also made true declaration attractive; had it reduced the maximum tax to 2½ or even to 2 per cent., it is likely that many taxpayers, pleased by this mark of confidence in their honesty, would have told the truth. The detection of false declarations would then have been greatly facilitated, both by means of comparison with the true ones and by the support which favorable public sentiment would have lent the assessors in fulfilling their duty. The assessment, in all probability, would have been so much sharper that no deficiency would have been caused by lowering the tax-rate. And even if a deficiency were caused, it could not embarrass the Government seriously, since the whole income tax produced last year but sixteen million dollars, only a small part of the public revenue of Prussia. The Government might well have run the risk of a small temporary deficiency in order so to introduce the declaration that honesty should become from the outset part of its nature and soon grow part of its tradition. If the deficiency actually occurred, it would have been easy, after a short time, to raise the tax to its old rate, or, as the temper of the Landtag showed, even higher. Meanwhile, the most important point would have been gained. Honesty would have been established as a necessary, even a natural, part of the declaration.

This opportunity, really great both as a matter of just taxation and of eventual increase in revenue, has been lost. The Landtag allowed the rates on incomes less than 30,000 marks to remain at the figures proposed by the Minister, but introduced by amendment a further progression for larger incomes beyond the long-established rate of 3 per cent., so that hereafter the tax will be 3⅓ per cent. on an income of 50,000 marks, and will reach 4 per cent., the maximum rate, at an income of 100,000 marks. The upper chamber refused for a long time to consent to the bill, but finally gave way, and the Finance Minister, unwilling to add another to the long series of unsuccessful attempts at reforming the income tax, assented to the change. Now, entirely apart from the question how far Prussia can justly carry an income-tax progression which in itself she considers just, and without suggesting that, as a matter of theory, 4 per cent. is too high, we regard the introduction of the 4 per cent. rate at the same time with the new declaration as very doubtful policy. Heretofore many wealthy people have been able to secure an under-assessment simply by keeping quiet. That hereafter, unless they are deliberately dishonest, they will be assessed if not higher than they should be, still higher than they have been, will be in itself a grievance. When to higher assessment is added a higher tax-rate, the temptation to declare falsely will be strong. For the absolute difference caused by this higher rate is larger than at first sight appears. The cities and towns generally raise a considerable portion of their revenue by a surtax upon the national income tax. One hundred per cent. surtax is the rule, 200 per cent. is not unusual; in some of the democratic cities in the industrial district of Westphalia and the Rhine province 300 per cent. surtax and even more is levied. City taxes seldom fall in rate. It is not, therefore, simply a question whether the Elberfeld manufacturer who has an income of 100,000 marks shall pay the 3 per cent. he once expected to pay under declaration, instead of the virtual 2 per cent. he paid in the days of under-assessment, but whether he shall pay for national and local purposes 12 per cent. instead of the previous 6 per cent.

A PLAIN MORAL QUESTION.

Some aspects of the current theological controversies lend themselves to the professional mystification of experts who warn off the ordinary man as incompetent to discuss such technical questions. One position, however, assumed by some of the advanced liberals is so stripped of technicalities and brought down to so simple an issue of right or wrong that one man's moral sense is as competent as another's to pass judgment upon it. We refer to the idea which the *Christian Union* keeps reiterating, with the approval of many, that a minister may honorably remain in the service of a church though repudiating leading articles of its creed. It is admitted that the dissent is open, that it is radical, and that it has to do with matters of belief which the denomination at large regards as vital, and which church courts would hold to be essential to ecclesiastical standing. It is acknowledged that no man rejecting the articles in question could obtain admission to the ministry of the particular sect, in the first instance. Still, it is maintained, once in he may rightfully stay; in fact, it is his duty to stay and reform the creed according to his notions. To call in question the honesty of such a proceeding is to expose one's self to being held up as an enemy of religion —a thing that surprises us in the *Christian Union*, as if it were to revert to the old homiletical practice of holding up "the merely moral man" to condemnation.

The defence put forward for this position, which we have declared to be morally perilous, will not bear examination. It consists, in the first place, of the assertion that it is monstrously absurd for the creed-makers of one age to bind the thinkers of the next. This is the worst form of the "dead-hand" tyranny, we are told. But all this is aside from the point. The "dead-hand" system is a fact in ecclesiastical organization, whether we like it or not. Its legal sanctions are unquestionable; that is admitted. But its moral sanctions are just as unquestionable. It is the only way a denomination has of maintaining its integrity. It is its instinct of self-preservation. And no man is called upon to submit himself to it with his eyes shut. The minister has the situation put clearly before him at his ordination, and accepts it. In the Presbyterian Church, for example, he has solemnly to "approve the government and discipline of the Presbyterian Church," to "promise subjection to his brethren in the Lord," and to undertake to "maintain the purity and peace of the Church." After thus deliberately accepting the "dead-hand" system, what sort of a spectacle does a man present railing at its hardships? He has put the yoke on his own neck; if it galls, let him throw it off, but let him not deny the existence of the yoke.

In this aspect of the matter, it becomes an even more serious affair than simple rejection of articles of the creed. It is a direct renunciation of the authority of the Church. It is a denial of the elementary right of the Church to defend itself. The *Christian Union* says that the minister ought to make no secret of his heresy; he ought "frankly and fearlessly to avow it." But he ought to do more than that: he ought to declare his unwillingness to submit to any form of organized belief. He rejects the authority of any official creed. A church would be ineffably silly to "reform" its creed at the behest of a set of men who announce beforehand their contempt for the whole system of official creeds, reformed or otherwise.

But it is further maintained that a minister's loyalty is not really pledged to a creed, but to "Christ and the truth." This is to confound what may be a man's private feel-

ing and attitude with what is his public and official position. And since the whole question is as to the morality of his public and official position, this form of defence again appears irrelevant. Such a plea would not be listened to for a moment in a civil or ecclesiastical court. Fidelity to the express language of the creed, not to any assumed private standard, would be insisted upon. And how is it different in the forum of conscience? How can a man there substitute a private standard for the one he has publicly and officially agreed to stand or fall by? It must be remembered that it is not now a question of being within the generally recognized liberty of interpretation and subscription. The very point of the case lies in the heresy being undeniable and quite beyond the limits of denominational toleration. In such circumstances, for one to fall back on the sincerity of his devotion to "Christ and the truth" seems to us morally as unjustifiable as it is legally absurd.

We do not need to say that all our sympathies are with the men in the various denominations who are open-minded enough to see how the new wine of modern research is hopelessly bursting the old ecclesiastical wine-skins. If they can conscientiously read the new meanings into the old shibboleths, well and good. If they belong to a church which has officially and publicly declared that the historical symbols are not regarded seriously any longer, even though nominally retained, we must absolve the ministers while condemning the church. But if they have seriously accepted the creed of a denomination which continues to take its creed seriously, and then think they can flout it while still serving under it, we can only say that the mass of men will regard that as an immoral thing to do.

THE IRISH LAND BILL.

LONDON, June 23, 1891.

THE Irish Land Bill, intended by Mr. Balfour to be one of the chief factors in his scheme for the establishment of social order in Ireland, has passed its third reading and been sent up to the House of Lords. It is not likely to be materially altered there, so that the time has come when an attempt may be made at describing its main features. It is a measure of extraordinary complexity. Only the ablest members could take an effective part in its discussion, or suggest or carry through material amendments. The Government, with its usual majority, nine-tenths of whom really knew nothing whatever of the bill, could at will vote down the combined Irish members of all parties, most of whom at least had some opinions on the subject. A reference to other acts and to scattered Government returns not even specified in the bill, is necessary for its comprehension. How simple and open to ordinary intelligence were the most advanced appliances of civilization fifty years ago compared to the complications with which our lives are now surrounded! So the legislation of the past was generally as comprehensible as a child's primer compared to the network of enactments, such as the Irish Land Bill, in which society is now being more and more involved.

The Parliament of the United Kingdom, instead of letting England, Scotland, and Ireland raise separately funds for their internal administration, levy taxes off the United Kingdom, and then almost by rule of thumb portion it back for local purposes. As, under the influence of modern economic ideas, increasingly heavy demands are made upon taxpayers, so the allotment of local grants to the three kingdoms becomes larger, and their apportionment more and more difficult. The sums granted to Ireland are mainly for constabulary and Castle rule; poor-law unions in relief of rates, road authorities in relief of county cess; a share of new customs and excise duties, application not yet arranged; education, industrial schools; the salaries of teachers and medical officers in poorhouses; medical offices and medical and surgical appliances for the poor; salaries of officers under the Public Health Act, and support of pauper lunatics. Constabulary and Castle government, being the essentials of British rule in Ireland, are to be held clear. The other grants above named, with £40,000 per annum as an "exchequer contribution," amounting altogether to £1,350,000 (less £180,000, the proportion payable to the larger Irish cities, not supposed to be directly interested in land purchase), are to be held as security for a Government advance for land purchase of their capitalized value, £30,000,000. This is the essential basis of the bill. England, having for her own purposes planted the present land system in Ireland, seeks partially to abolish it, at the risk, not of the United Kingdom, but of Ireland. The above grants are distributed to the Irish counties in certain proportions. The loan is to be allotted, accordingly, in what, during the discussion of the bill, have been familiarly called "water-tight compartments." For instance, £1,474,000 is all that will be allowed for the purchase of land in Antrim, even should the contiguous counties, Derry and Down, not require their proportions of £791,000 and £1,495,000. This system runs all through the measure. The counties are "water-tighted" as to their purchasing powers; each year is "water-tighted" as to losses falling on the guarantee fund; the Irish grants are "water-tighted" as to their application if not fully needed for the main purposes specified. Then, again, the country may be "chess-boarded" in tenancy and ownership by the sale of only portions of estates.

Landlord and tenant must agree as to sale and purchase. There is no compulsion about the measure on either side. Having agreed, they apply to the Land Bureau, which will confirm the bargain and carry out the sale if the bargain be such that the tenant is considered likely to meet his engagements under it. The landlord will be paid three-fourths of the agreed sum in guaranteed land stock, bearing 2¾ per cent. interest. The other fourth, bearing a like interest, will be held over as a guarantee deposit until the tenant has paid a certain number of his annual instalments. The tenant is then put into possession of his holding, and, paying 4 per cent. on the purchase money, will, at the end of forty-nine years, become absolute owner. Of this 4 per cent., 2¾ per cent. is the above-named interest to the landlord, ¼ per cent. goes to strengthen the guarantee fund, and 1 per cent. to a sinking fund which will extinguish the principal after forty-nine years. If the tenant defaults, he will be sold out. In case of loss on resale or of agitation against the payment of rents or instalments, recourse would be had to the guarantee fund. In such a case the Lord Lieutenant will have the power of direct levy or direct stoppage of grants, without reference to any local authority. Should the tenant have bargained to pay less than twenty years' purchase of the annual value of his holding, he must pay a heavier instalment during the first five years of his tenure, as an insurance against possible bad seasons, which additional instalment will, after he has been in possession eighteen years, be allowed him in future payments. Such are the main provisions of the bill. The necessary bookkeeping will test human ingenuity. Well did Mr. Morley say, "I think that if the Chief Secretary were to go to any great firm of accountants in the city, and submit the question of these accounts to them, they would absolutely despair."

Speaking generally, the objections to the bill are: Its not being comprehensive. It will affect but a small proportion of the tenants. It is not likely that the £30,000,000 can, owing to the complexity of our land tenure, be apportioned further than £1,500,000 a year. It hypothecates local resources without local consent or control. It will render more discontented than ever the tenants under rent, who will be paying a heavier price for their land, without the prospect of ownership, than those under the Act, who will become owners in forty-nine years.

Each party in the House took up a different attitude towards the measure. It was discussed in Committee for over thirty sittings of seven hours each, during which, according to Mr. Balfour's acknowledgment at the end, the Irish members showed "conspicuous ability and entire fairness." Beyond furnishing an irresistible majority, which must have had an easy time of it in the library and smoking-rooms, the Conservatives generally can hardly be said to have taken part in the debate. They left it almost entirely to Mr. Balfour, aided occasionally by Mr. Madden, Attorney-General for Ireland, and in fiscal details by Mr. Goschen, Chancellor of the Exchequer. The English Liberals were opposed to the bill, mainly on the ground that it was a hypothecation of imperial credit to relieve Irish landlords from their difficulties. They ridiculed the idea that, in case of some great misfortune to Ireland, such as bad seasons, the grants to education and to pauper lunatics would be cut off rather than that the Imperial Exchequer should suffer.* While voting against the second and third reading, they heartily supported the Irish members in their attempts at amendment. All Irish parties voted for the second reading on the ground that the bill, however defective, would confer certain benefits upon a large number of tenants.

Generally speaking, the Irish parties assumed quite different attitudes towards the measure. The handful of Ulster men supported Mr. Balfour. Mr. Parnell patronized the bill, and denounced the Nationalists as jeopardizing it by their discussion of details. For the most part his men absented themselves: only one or two took any practical share in the discussions. The main opposition came from a small body of Nationalists, and of this small body only three or four, fully grasping the measure in all its particulars, accomplished anything. Two members won the admiraton of even their bitterest opponents—Mr. Sexton and Mr. Knox, quite a young man, little over a year in Parliament. Mr. Sexton has grown out of that "windbag" style at first said to characterize him. In statesmanlike ability and flexibility and in debating power he occupies a

* Judging from the past, neither the local rates nor the Exchequer are likely to suffer. The extraordinary punctuality with which our people have hitherto met their engagements in land purchase is much to their credit. The last report of the Commissioners, that up to August, 1890, shows that while £409,698 was due from 11,272 farmers to whom advances had been made for the purchase of their holdings within the previous five years, but £2,554 was in arrear, and but £611 of that sum was more than six months in arrear.

front rank in the House, and the discussion of this bill has added much to his reputation. His position is due to pure genius and native intellect. He is the only man who, without a University or legal education, makes any really great mark in the House. But in him the defects arising from the want of early training and of association with his intellectual equals in school and college, are shown in a certain apartness and shrinking from society possibly fatal to his ever occupying the position of leader. He is a man of untiring industry and a wiry constitution, and he almost lives in the House. Through the fair and foul of an unhealthy season, at times when a large percentage of the members were down with influenza, he was always at his post, often alone, generally with Mr. Knox, during a few weeks supported by the Healys and Mr. Kenny.

Criticism was directed mainly against the incompleteness of the Land Bill, the impossibility of its putting an end to dual ownership as a rule, the confusion and heartburning it would be certain to cause; above all, against the monstrous injustice of hypothecating Irish resources without Irish consent or control. In these contentions the Nationalists were supported by Mr. Morley, Mr. Bryce, Mr. Lefevre, and other Liberal friends. What appeared to most Irishmen a disastrous proposal was frustrated in only some of its details, *i. e.*, Mr. Balfour's determination to alter the constitution of the present Land Sale tribunal (which gives entire satisfaction in Ireland) by the addition to it of the Fair Rent Commissioners, who are much in arrear with their duties, and whose sympathies are believed to be adverse to the tenants. A serious difference arose among the Irish parties and the English friends of Ireland generally regarding the limit put upon the possible purchase of more than a certain number of holdings of over £50 valuation in each county. Mr. Balfour, the Parnellites, and many English Liberals pointed out that while there were in Ireland 41,000 holdings, value £4,480,000, over £50 valuation, and 511,000 holdings, value £5,650,000, under that valuation, the present Ashbourne Act, without some such limit, had been applied to the extinguishment of a few of the larger holdings by the expenditure of a considerable proportion of the fund at their disposal. This contention appeared reasonable. Yet, on the general grounds of the disadvantage of chess-boarding estates and discouraging sale, the clause was combated by the Nationalists, Mr. Shaw-Lefevre, and other English Liberals. Numerous minor concessions and improvements were secured by Mr. Sexton and his side, which are now being flourished in the face of the Parnellites.

A second portion of the bill, dealing with the congested and more impoverished districts in the west of Ireland, acknowledged by all parties to be an honest attempt by Mr. Balfour to deal with a very difficult and knotty problem, passed almost without discussion.

So much for the Irish Land Bill. Time alone can tell which will be justified, the prognostications of its extreme supporters that it will settle the Irish land question, or of its more severe critics, that it will effect little and may make confusion worse confounded. Probably the truth will be found to lie somewhere between them. Nothing has occurred to alter the conviction with which these communications of mine to you have always been imbued —the conviction that the pacification and elevation of Ireland, the accomplishment of her real union with Great Britain, is to be found only in a wide measure of home rule, in the throwing of responsibilities on Irishmen themselves, the turning into useful and safe channels that abounding love of their country and zeal for her welfare which animate Irishmen at home and abroad. But we are at present entering on a new era regarding which nothing can be predicated. The forces of the past twelve years' agitation are evidently dying out. The personnel of the movement is undergoing a decided change. Owing to the Parnell split, methods of working must be radically altered. The legislation of the past ten years is having its effect. Ireland is, in proportion to its population, more prosperous than ever. The population is diminishing — the Catholics more rapidly than the Protestants. The centre of greatest population is moving from Dublin to Belfast. A general election alone can tell us what the country really wants, and what it intends and is prepared to do. The sooner a general election comes, the better.

D. B.

PEACE OR DEATH.

ITALY, June 21, 1891.

AFTER a thirty years' residence in Italy and an eight months' absence, I am more than ever struck on my return to find how entirely the real Italy differs from the view taken of her abroad, and from the fictitious Italy which alone is visible in Rome, where all the pictures sent abroad are manufactured. On one point, however, real and political Italy are agreed, namely, that the *sine qua non*, not only of progress and prosperity, but of her continuing to exist as a nation and first-class Power, is absolute and perfect peace. It is to insure this that she entered on the Triple Alliance after keeping her "hands free," her frontiers and coasts undefended, and her people unarmed for twelve years after her unity was accomplished. It is for defence, not for offence, that she has of late years spent her millions in organizing a citizen army, in creating a fleet, in constructing railroads which shall enable her to mobilize that army on her northern frontier in case of attack from any hostile Power.

Did she well, did she ill, the thing is done. The money is spent, the fleet is the envy of Europe, and the army not only has done much for the moral unity of the populations, but has given them a sense of security which alone can enable a people to devote their attention to education, to industry, to commerce, and to what in Italy is the *non plus ultra* of her future welfare—to agriculture, to the increase of the production of food for her own people, and for exportation to such foreign countries as shall make commercial intercourse possible. Whether Italy was justified in assuming that France was hostile to her existence as a nation with equal rights and duties in the European concert, whether she attaches too much importance to the Ultramontane championship of the Pope, we cannot undertake to say. Certain it is that Republican France restored the Pope in 1849, that Imperial France kept the Pope on his throne of corpses for one and twenty years; and that this was felt to be an inevitable necessity by Louis Napoleon, who had no religious sentiment, is proved by the fact that, even at the eleventh hour, when he might have had the moral support and (as far as the King, court, and military element were powerful) the material aid of Italy at the commencement of the fatal war, if only he would withdraw his protection from the Pope in Rome, he dared not and did not do so. Then, in the present Republic, there have not been wanting symptoms to prove that only the power is lacking to prevent a very large and influential portion of the French people from entering on a crusade for the restoration of the temporal power. Of course the Italians know that this is the very party which would overthrow the Republic in favor of a military dictator, or a legitimist pretender, or a Bonapartist adventurer.

As for any other question than the Roman, Italy has not one single reason for stretching her hand across the frontier which she nevertheless feels bound to jealously guard. As for her unredeemed provinces, she knows that Nice would not return to her impoverished bosom if a really free plébiscite were allowed to-morrow. As for Trieste, she knows also that it will never be abandoned by Austria until she has other seaports on the Adriatic—that Germany would not allow her to do so if she wished it; and that the Trentino will revert to Italy at some time or other as compensation for something else that Austria covets and in time will get. If we come to the home Government, I doubt whether there is a single nation in Europe which is as contented as are the Italians with their monarchical régime. It was not the ideal of the party of action; but, as they could not get the Austrians out of Lombardy without an army and a treasury, they said, "Unify Italy and be king over her." Italy was unified and Victor Emanuel was made King. Had his successor proved a jingo monarch, had he had the fancy for reigning and governing, he would probably have had a short reign, especially as the army is the most democratic in Europe. But he did a quite other thing —he parted from the aristocratic Conservative party which had been the pillar of his father's throne, and, without intermeddling in internal politics, leaned decidedly to the side of popular reforms. Old Victor was about the most extravagant monarch of this century. On his death the Government proposed to the young King that a bill should be presented to Parliament for the payment of his father's debts. With an almost resentful air he made answer, "That is my business," and he has paid and is paying them. Even so with the maintenance of the heir apparent—that is also "his father's affair"; and while the Queen of England, with her enormous wealth, does not blush to ask from Parliament grants for the maintenance of her grandchildren, King Humbert provides for his son and heir out of his privy purse. These things tell with a poor and struggling nation.

Again, the Italians, who as masses take no part in politics—their abstention at the urns to the extent of from 30 to 50 per cent. proves this—look even upon general elections as a *disgrazia*, a misfortune. They felt some enthusiasm at the first elections, when the question was to decide whether Italy should be united into a nation, and again in 1876, when the Moderates were deposed and the Liberals promised everything that was asked for. But since then, and even more emphatically since the extension of the suffrage, an increasing indifference is notable: "It all comes to the same thing," say they, "whether one party is in or out; and elections are just a stirring of troubled waters for no good that we can see to follow." The one supreme problem is how to make ends meet. That is the question put daily in Cabinet counsels and in national or in private banks; in industrial establishments and in the homes of the middle and poorer classes. Everywhere the answer is the same: Economy, retrenchment—economy to the backbone, as Sella was so abused for saying. Talk of war being desired in Italy, of its being considered as a regenerating factor! Go through the country and talk with any class of manufacturers, merchants, shopkeepers, with the

artisans—and, above all, with the peasants. They will tell you with one voice that to be led or forced, or to drift, into war would mean absolute and immediate ruin ; that war would mean for Italy what a fire would mean for a man who had spent his all on building and furnishing a house without insuring it against destruction, just as he was about to make it profitable by letting and inhabiting it.

I note especially on my return that many add: "Let those who drifted us into Africa be pardoned, as they are dead; but let some man arise who shall find the means of drifting us out of it again as soon as it is possible to do so with all due regard to our dignity and to our honor." This new expression of feeling I note especially in the provinces where the appalling increase of emigration alarms all. In this province, which fifty years ago did not even figure in the statistics of emigration, some of the villages are depopulated; emigration has become a mania, a wide-spread and deep-rooted epidemic. Eight thousand have gone out this year, some selling or mortgaging their homestead or hovel, some with nothing but what they carry on their backs, all with their railway fare and voyage with food paid out to Rio Janeiro. No wonder that they go; but though no earthly power can stay them, those who remain behind are seriously striving after some solution to the land-craving, labor-seeking problem. And the first remedy proposed is to "let Africa go," and to spend all available sums that can be spared from other budgets or saved from any source, for the internal colonization of which so much has been promised and for which nothing has been done.

Of fertile but uncultivated land there are half-a-million of acres in the island of Sardinia, in the Tuscan Maremmas, in the Agro Romano, and in the island of Sicily. The agricultural population is quite too numerous in many parts of Italy; given the land, and provided the capital necessary for its preparation, for the construction of dwellings, for implements, seed, and, of course, the keep of the colonists for two or three years, and the question of agricultural distress would be solved, besides the addition to the national wealth produced from the cultivated soil. And all this sounds so simple that one wonders why it was not commenced years and years ago. Again, without entering into details for which space is wanting, the system of coöperation, of coöperation in labor and productive industries, has taken such a hold of the popular imagination that, if it could be applied universally, it would of itself prove a counter seduction to emigration. The Government is pledged to give public works to these bona-fide coöperative societies, and the initial law, which was a true step on the path of progress, is being revised and is to be extended to the provinces and communes, so that by degrees the accursed race of middlemen, of sweaters, may be abolished, and the public works which must be finished in Italy be really executed by the now unoccupied masses. The reaction against speculators and building speculations is intense, and it is a healthy sign.

Even these questions are discussed, however, in a very limited circle. Among the middle classes education is the order of the day, and the discussions on the budget of public instruction have been followed with the keenest interest. Villari's method and daring are on a par with his popularity, and this is strange when you consider that he has set the students down with a firm and almost disdainful hand: here forbidding their knocking off work to play at commemorations, there warning them that if they do not mend their manners, he shall ask the Superior Council to revise the statute allowing them to elect their magistrates. To every demand for subsidy or increase he has answered, "Non possumus; the coffers are empty." Only in one case has he augmented the miserable pittance doled out to the masters and professors of higher or secondary education; and how has he managed to do this? By increasing the fees to be paid by the students at the lyceums and gymnasiums—asking why, forsooth, the sons of the well-to-do classes are to be educated at the expense of the nation, which cannot yet afford to do sufficient for the elementary schools, where the whole nation has a right to a free place. Villari has been applauded even by the classes who must pay the piper. Even when he touched on the question of the gradual diminution of the ridiculous number of universities which encumber Italy, he was listened to respectfully, though the belfry-tower spirit and vested interests have proved too strong for any of his predecessors. If the Ministers of War and of the Navy and of Public Works had been equally courageous, they would have found equal response throughout the country; and if the present House should object to any economies, let the Government appeal to the country, and Europe would see what chance there would be of raising a war-cry in Italy. J. W. M.

THE CONDITION OF ITALIAN LIBRARIES.

LAKE COMO, May, 1891.

THERE are in Italy between thirty and forty libraries which the present National Government, in recognition of former Governmental support, is committed to maintain, at least in some degree. It is a division of resources which even a rich country would find an impediment in developing a proper National Library, and Italy, with its over-burdened Treasury, is far from being in a position to offer the world a single library of the first class. In talking the other day at Rome with Villari, the new Minister of Public Instruction, he referred to this over-abundance of subsidized libraries as one of the difficult problems which he has to confront in decreasing the expenditures of his department. It also well represents how localized interests have not been abated in what is called the political unification of the country. Indeed, Italian unity is a good deal of a fiction, and it will take a great deal more than the erection of statues of Victor Emanuel, Cavour, and Garibaldi all over the peninsula to bring people and institutions in due subordination to a central idea of Italian power.

Italy, to build up a library which shall rank with the great national libraries of the future, will need to concentrate her resources ; for though she has libraries now which are rich in manuscripts, she has not one which is able to meet the great demands of modern scholarship for printed books. In asking to see their extent in some of the interests which have sprung up with the present century, one is struck with the poverty of the resources of the best of her libraries; and I have not seen anywhere a collection which affords more than a most meagre array of books on America. I judge by the shops, and I learn by inquiry among those who have long lived here, that the Italians produce few books of value and buy no more. Their leading dealers are very often Germans; and English-speaking residents and tourists are apparently those for whom the shelves in the best shops are arrayed. Any one who has had for the last twenty years a necessity to make selections from the contemporary literature of the modern European languages has been distinctly conscious that, except for the new editions of the elder authors and the commentaries upon them, Italy, by comparison, has had very little to offer.

If with this want of fecundity there went a corresponding slothfulness in libraries, there would be little to be hoped of Italy in amassing great collections of books. In some respects I have found a more active bibliothecal spirit in Italy than elsewhere in Europe, and I suspect that if Italian unification has accomplished nothing else, it has unshackled the minds of librarians, and placed them more in sympathy with the modern gospel which makes a library more the servant than the master of its users. I suspect this is not, as a rule, the case in Germany, where scholarship is better drilled and the book trade better organized and more productive than in any other country of Europe. I cannot account for this difference in the librarians of Italy and Germany, except that their respective spirits reflect the corresponding differences of their political consolidations. I have certainly found in Italian librarians a great alertness of mind and a marked eagerness to observe the advances in library methods which have taken place elsewhere during the last five and twenty years. But at the same time, with all this activity, the miserable bureaucratic methods of which even the chance stranger sees so much in Italy, are allowed to embarrass the efforts of her best librarians, and I have found them looking, but quite against hope, to the active intelligence of Villari to find a way for a new dispensation.

Italy seems to be filled with placemen, and the deputies in her legislative chambers and the other controllers of patronage fill offices, and create new ones to be filled, with a good deal of that childish fervor which one observes in the debates in their Parliament. I do not give this as the observation of a hurried traveller, but as an impression confirmed by talking with a good many of the foreign residents of Italy. I find the same confirmation in what the leading librarians tell me of the way in which their intentions are thwarted by incompetent subordinates whom political patronage forces upon them. And, what is infinitely worse, they have little hope of anything better. The opinion seems to be that Villari, for instance, in his department is powerless for good beyond a certain point, and any attempt on his part at radical improvement will simply engender enmities that will send him back to his studies.

So one looks upon the principal libraries in Italy with not a little gratification, to see how, with all these impediments—a crippled service and dissipated resources—a few earnest men, impelled by their contact with the spirit of the day, as reflected elsewhere in an improved library service, have yet made the library methods in Italy not altogether unworthy the study of the most experienced librarian. The present expenditure of the Department of Public Instruction in the support of the thirty or forty libraries is a condition I am afraid not easy to be overcome in any gainful way, inasmuch as the desired concentration would conflict with vested interest, secured by concessions in the general plan by which Italian consolidation has been brought about.

In the present condition of Italian finances nothing adequate to the needs of the larger libraries can be allowed, and the wonder is that so much is done as is apparent ; and it is doubtless owing to the great force of character which I find in some of the leading librarians that any

progress is made at all. During the years when the new Italian kingdom had its capital in Florence a certain amount of concentration started the new Biblioteca Nazionale Centrale on its career; and when later the Government was transferred to Rome, the new capital was given another library, got together in a somewhat similar way, which is called the Biblioteca Nazionale Vittorio Emanuele. Neither collection is housed in any way suited to its functions, and the one at Florence is much the most important; indeed, it is marvellously rich in early printed books and in manuscripts, while the library at Rome has few manuscripts, and not much to boast of in serviceable literature, though both are doing the most they can in garnering and arranging the current tests of literary and scientific progress, in periodic and serial publications. I went over the library in Rome with Signor Grampini, and was witness to his assiduous attention to its interests, and was glad to see in operation in a large library that outward form of a catalogue which, on the whole, is most to be desired. The card catalogue, which is so common in the United States, has proved itself cumbersome and unsatisfactory. I cannot see a single advantage which it has, except the ease with which it can be kept in a strict alphabetical arrangement. To use one, when it becomes large, involves vexation of spirit, with great loss of time, and there is always an accompanying suspicion of misplacements and oversights; and yet, from the time when Charles Folsom introduced the initial form of it at the Boston Athenæum, to the present day, its employment in our leading libraries has served to make it the almost universal system in the United States, and its use has in some degree spread to Europe. In one or two small libraries in America, and lately in Harvard College library, a method which has been independently developed in the University Library at Leyden, and which I find in a more advanced state of mechanical construction here in Italy, has, I trust, inaugurated a far better arrangement. For a library with a card catalogue of long growth to change to the better method would involve cost and labor that must make the process a task of difficulty; still, I question the wisdom of hesitancy. The serious objections to the card catalogue, besides the irksomeness of consultation, are the demand for much light in its position and the inordinate requirements for space, which few buildings can afford. The inevitable makeshift is a compression which gives six or eight drawers, up and down, and this means that a user, standing at the case, prevents other access to many thousand cards for as long a time as the weariness of consultation holds him at the drawers. This is a most serious drawback in a library of much use.

The alternative plan, here in Italy so admirably exemplified, is to write the titles on stiff paper, say 4x7 inches, and then to bind them in small volumes of a hundred slips each, using a mechanical spring or other device, which binds and unbinds easily. The slips, with a little dexterity of handling, fly rapidly over under the eye, so that a hundred titles are scanned with but a small part of the time requisite to turn over as many cards, while a single hundred instead of many thousand titles are monopolized by the consulter for the time being. The mechanism of these little books which is most in vogue here was devised in the Marucellian Library at Florence, and for simplicity and firmness is all that could be desired.

That the card-and-drawer system has some advantages when the purpose is to keep a record seldom to be consulted, is undeniable; but when constant use is made of it, its disadvantages are so great that it cannot long continue to be employed when the claims of the bound-slip system are once understood. As between this last system and that of the British Museum, where the titles are on slips laid down in folios, the advantage of cheapness is much in favor of the former, but the English system has a great superiority in the rapidity with which the titles can be scanned; but it is more cumbersome, and the titles are available to a smaller number of people at the same moment. JUSTIN WINSOR.

Correspondence.

NEW-SCHOOL POLITICAL ECONOMISTS.

TO THE EDITOR OF THE NATION:

SIR: I have read the discussion between yourself and President Walker on the attitude of the economists with such interest that I beg leave to contribute my mite to it. It seems to me there is no material difference between you on the main point, namely, what we should try to teach the surging masses so vividly described by the distinguished President in his address. Far from disputing with him the proposition that the practical limitations of economic principles should be insisted upon, it seems to me these limitations are the very things to be taught.

The voting public accept without limit such reasoning as this:

There cannot be two prices for the same thing in the same market; therefore free competition with Europe will result in wages being reduced to the European level; and again:

Free competition brings all prices to the lowest point; therefore, how high soever the tariff, we shall get things at the lowest point at which Americans can produce them.

These propositions are very far from being true in practice; and one task of the economist is to show what causes prevent their application. I can think of but one living writer on economics in America and one in England who are subject to President Walker's criticism.

I am sorry to see so sound a thinker talk about the "two schools" of political economy. After much careful examination, I have concluded that the qualification required to constitute a new-school man is half a page or so of slighting remark about the economy of Ricardo, Mill, and the English school. Had the President of the Economic Association been a man of less sturdy independence, one might have suspected that the remarks to which the *Nation* takes exception were suggested by previous failure on his part to thus qualify himself, and were the repetition of the creed necessary to his admission to full membership in the new economic church.

Let me set forth one striking illustration of the unscientific character of the distinction actually made between the two schools. The "new school" commonly calls itself "historico-statistical," because it professes to approach the subject on the side of the facts by history and statistics. Now, who is the father of the historico-statistic method in the United States? There can be but one answer—David A. Wells. He did not commence work in the field in which he has become preëminent as an economist at all, but as a student of manufacturing statistics charged by the Government with the duty of devising the best system of collecting the revenue necessary to the prosecution of the war and the payment of the public debt. No man was less inclined to economic theory of any kind than his early reports show him to have been. He studied in minute detail the conditions of manufactures of every kind, from the growth of the raw material through all stages to the finished product in the hands of the consumer. All his general conclusions were founded on the facts thus collected. No purer example of the method can be found anywhere. And yet he would have to do much penance and execute a general recantation before being admitted to the church of those who call themselves new-school economists. S. NEWCOMB.

WASHINGTON, July 3, 1891.

SPECIAL LEGISLATION.

TO THE EDITOR OF THE NATION:

SIR: At a meeting of the Providence Commercial Club on June 27, the subject chosen for discussion was "Private and Special Legislation." Ex-President Cleveland, as the guest of the occasion, spoke with his usual good sense and patriotism. But there is one question I should like to ask, to which I find no answer in his remarks, and that is, How can we expect anything but special legislation when we intrust the work exclusively to special legislators?

I am ashamed of repeating so often, what is yet the root and key of the whole situation, that the general interest has no representative whether in Congress or the State Legislatures; every man who has a voice or vote being elected by a special district, bound to look after its interests, and having no interest or authority to speak for the whole nation or State. It is true in mathematics, but it is not true in politics, that the sum of the parts is equal to the whole.

Let us take a case. A certain district, animated by such motives as Mr. Cleveland appeals to, determines to send its best man to Congress. It selects one who for public spirit, purity of character, and business capacity commands almost unanimous support. Arriving at Washington, he finds that every item of business is sent to the standing committees. Going thither and finding a universal compromise and trading of local interests, he attempts to consider them from a national point of view. The first effect produced is a stare of surprise, mingled with a tinge of resentment. If he is obstinate enough to persevere, he will find himself tripped up and baffled at every turn. His fate in open Congress is just as bad. Even if he could get recognized by the Speaker, he would be borne down by the manipulation of private interests, and could look for no national support because he would not be known or cared for outside of his district. While his efforts on behalf of the general interest are thus wasted, he is totally unfitted for that log-rolling struggle of private and party interests which is the logical and almost exclusive work of a Congressman. He returns to his constituents, having accomplished nothing, and they, not having seen the working of the machinery, instead of charging the failure to the system, conclude that they have mistaken their man. All that he has achieved is a distinct loss of standing in his own community.

Mr. Cleveland charges the evils of special legislation to the carelessness of the people, and expresses his wonder that men of business, so active in their own affairs, will give no attention to public affairs often of even more importance to them. It is just because they

are men of business that they see how their efforts fail to produce any result, and dislike to put out their strength under such conditions. A horse attached to a load which he cannot draw soon becomes discouraged and will not exert himself at all.

It is sometimes proposed that there should be members and Senators-at-large in Congress, but they would fail from the want of connection with and responsibility for administration. The only persons who can represent the national interest are the Cabinet officers, and they would serve as a rallying-point for the independent members who were sent there by their constituents to oppose special legislation. If Mr. Cleveland achieves that which has never yet been arrived at since the Government was formed—a second election to the Presidency after an intervening term—it will be because he dared to overleap the bounds of party and advocate what he believed to be for the interest of the nation. Yet he could do this only in the most general terms, and with no reference to the details which must constitute the very basis of effective action. Just think what a whirlwind of enthusiasm would sweep over the land if a President were to bring forward at the opening of the session, through his Secretary of the Treasury, a tariff bill professedly conceived in the interest of the nation, and, however it might be mistaken in details, was ready to submit it to the full fire of public discussion from that point of view. G. B.

Boston, July 2, 1891.

Notes.

The Century Co. have in preparation for the fall three works originating in their magazine, viz., Mr. George Kennan's 'Siberia and the Exile System,' in two volumes; Amelia G. Mason's 'Women of the French Salons'; and W. W. Rockhill's Thibetan book of travels, 'The Land of the Lamas.'

Charles Scribner's Sons will rapidly issue in succession their announced University Extension Manuals, including 'Money: Its Use and Abuse,' by W. Cunningham; 'The Fine Arts,' by Prof. Baldwin Brown; 'English Colonization and Empire,' by A. Caldecott; 'The Study of Animal Life,' by J. Arthur Thompson; 'Physiography,' by H. R. Mill; and 'The Philosophy of the Beautiful,' by Prof. Knight of the University of St. Andrews.

Harper & Brothers will publish a Life of Gladstone, by G. W. E. Russell; 'Tales from Scottish History,' selected by Dr. W. J. Rolfe; and 'A Man's Conscience,' a novel by Avery MacAlpine.

Henry Holt & Co.'s first English book under the new copyright law will be a 'Romance of the Moors,' by Mrs. Mona Caird, author of the 'Wing of Azrael.'

Bishop Doane's Addresses to the Graduating Classes of St. Agnes' School during the past twenty years will make a volume to be issued by Thomas Whittaker in September.

'A Bookseller's Library and How to Use It' is the title chosen for the reprint of a bibliography of catalogues and works of reference necessary to the finding of books which has recently appeared in the *Publishers' Weekly*, in the series of articles on "The Profession of Bookselling." The reprint will issue from the office of that paper.

Ginn & Co. have in press, in two volumes, 'Specimens of the pre-Shaksperian Drama,' edited by Prof. John Matthews Manly of Brown University.

D. C. Heath & Co. will soon bring out 'Studies in United States History,' for use in grammar schools, by Mary Sheldon-Barnes and Prof. Earl Barnes; 'Hermann und Dorothea,' edited by Prof. W. T. Hewett of Cornell; and 'Goethe's Meisterwerke,' selections with notes by Dr. William Bernhardt.

Eight years ago we welcomed the appearance of Mr. D. B. Monro's 'Grammar of the Homeric Dialect,' and now we have from the Clarendon Press (New York: Macmillan) a second revised and enlarged edition of this admirable work. Mr. Monro has availed himself of the really large amount of fresh contributions to the subject during the interval (mostly German, but including Prof. Goodwin's revised 'Moods and Tenses'), and has effected his alterations and improvements without much disturbing the schematic arrangement. The Grammar now, more than ever, meets the want of students and merits praise.

Two years ago we were favored with a copy of the generous Catalogue of the Library of the Corporation of the City of London, to which we especially called the attention of Americans sojourning in that great city, since the library is free. Scholars rather will be interested in the new Catalogue of Hebraica and Judaica in the same institution, compiled by the Rev. A. Löwy, and just published by the Corporation. To a certain limited extent the works enumerated in the smaller volume are to be found in the larger, as one may see by comparing the titles under Bible and Zunz, for example; but not only is the greater portion freshly catalogued, but the contents of systematic and composite works are recorded as they could not be in the main Catalogue. The gift which formed the basis of the present collection consisted of some 400 volumes of ancient Hebrew works, presented in 1846 by Mr. Levy Salomons and since extended and perfected. Mr. Löwy has supplied an index to the Hebrew and other Semitic works, and an English subject-index, which takes in the supplementary appendix, and which will be of great help to readers and students. He is also to be praised for his numerous cross-references. The Catalogue proper fills 176 very open pages.

'With the Beduins,' by Gray Hill (London: T. Fisher Unwin), is a simple but very entertaining account of adventures in unfrequented parts of Syria. The farthest point east reached was Palmyra (Tadmor), where the inhabitants were found rejoicing in the recent discovery of a fresh-water stream running in an old flagged channel or conduit 16 inches deep by 22 wide. Up to this time, 1889, travellers had been obliged to bring their water supply with them from a distant well. This fortunate discovery is likely to have an important influence upon the wretched hamlet which now occupies the ruins. Mr. Hill gives an account, with a picture, of a finely sculptured bas-relief which had just been found, the only perfect piece of carving left in Palmyra. In a journey last year he visited Kerâk, the ancient Kir of Moab, to the east of the Dead Sea, whose fierce inhabitants maintain their independence of the Turk with indomitable vigor. Although not positively ill-treated by them, he was kept a prisoner until an exorbitant ransom had been paid. The Keraki and their strange town, perched on the top of a steep, stony hill, surmounted by a huge castle built by the Crusaders, are very graphically described. To the north of this place lies the great district which it was one of the favorite schemes of the late Laurence Oliphant to colonize with Jews. Mr. Hill speaks of it as being extraordinarily fertile and very sparsely inhabited. The closing chapter consists of a number of folk-lore stories and fables told the author by his companions. The book is admirably illustrated, mostly from photographs taken by Mrs. Hill, who accompanied her husband on his adventurous journeys.

Lovers of literature must needs rejoice when M. Anatole France sends forth a new volume of his ever delightful essays in criticism gathered from the worthy columns of the *Temps*. The third series of 'La Vie Littéraire' (Paris: Calmann Lévy; New York: F. W. Christern) is the latest to appear, and is as brilliant as its predecessors, as genial and as amusing. Perhaps it surpasses them a little in interest, as it contains a preface in which the author of the 'Crime of Sylvestre Bonnard' answers the attack made by M. Brunetière in the *Revue des Deux Mondes* at the beginning of this year on M. Jules Lemaitre and M. Anatole France. Separating himself from M. Lemaitre, whose writing he delights in, but who is abundantly able to defend himself, M. France proceeds to "chaff" M. Brunetière—there is no other word for it. There are nearly two-score essays in the volume—on Baudelaire, Villiers de l'Isle Adam, Barbey d'Aurevilly, Paul Verlaine, Édouard Rod, François Coppée, and Octave Feuillet; on Jeanne d'Arc, on Hrotswitha, on Rabelais, on Science and Morality, and on many other things.

M. Gustave Merlet has prepared for the use of French school-children a selection of the French poetry of this century, which will be welcome in many an American household where French is read. To this 'Anthologie Classique des Poètes du XIXe Siècle' (Paris: Alphonse Lemerre; New York: F. W. Christern) the editor has prefixed an elementary outline of the principles of French versification, which are absolutely different from the principles of English versification, and he has appended a brief biographical sketch of the poets whose verses are here included. The selection begins with household poems—childhood and the family; then there is a division of picturesque poems—nature and animals; third are moral poems—man and labor; and in the final section are patriotic poems.

A loan collection of book-bindings in the gallery of the Burlington Fine Arts Club has been one of the June shows in London. The Queen and other British book-lovers have contributed to it as well as certain old libraries like those of Durham Cathedral and of Westminster Abbey. Most interesting, perhaps, was the gathering of early English stamped bindings. Before the invention of printing, and more especially in the twelfth century, the British bindings were superior to those made in Continental Europe. After the development of the art in Italy in the time of Maioli and of Grolier, the British traditions were lost and the English have never since held a foremost position. To the catalogue of the Burlington Club's collection Mr. Gordon Duff contributes a preface on these earlier English stamped bindings, and Mr. S. T. Prideaux another on the more artistic development of the craft in Italy and in France particularly. Mr. Prideaux so far conquers the bias of patriotism as not to overpraise Roger Payne, whom some British writers on bibliopegy have set on a level with Padeloup and Derome. Both prefaces are written soberly, in excellent taste, and out of the fulness of knowledge.

The annual report of the St. Louis Public Library contains some suggestive tables, showing the fluctuations in the popularity of works and writers of fiction. In March, 1888, 'Ben Hur' was most in demand; from January to

April, inclusive, 1890, 'Looking Backward' far surpassed it. "It is curious to note," says the librarian, "that neither of these books attracted any special attention when first published." At the earlier date 'Anna Karénina' stood third in circulation; at the later, it fell below the twenty-eighth if it was read at all. In the winter of 1888-89 'Robert Elsmere' would have ranked among the first ten; in the first four months of 1890 it was out of sight. Last winter there was a marked revival of 'Lorna Doone.' 'Uncle Tom's Cabin' seems to hold a firm place in the first ten.

The combined 23d and 24th annual reports of the Peabody Museum of Archæology at Cambridge have no more striking passages than those which show the interest of women in this branch of science, already testified by the Hemenway expedition and in other ways. Mrs. Mary Copley Thaw endows with $30,000 a fellowship fund, primarily for the benefit of the present incumbent, Miss Alice C. Fletcher; Mrs. Susan C. Warren gives $5,000 for cases and $1,000 for explorations, and Mrs. Elizabeth C. Ware gives $1,000 for explorations. All other pecuniary gifts for the year 1890 were insignificant. Facts like these—and they are by no means isolated in our institutions of learning—ought to tell powerfully in favor of the higher education of women.

Tract No. 75 of the Western Reserve Historical Society of Cleveland, O., embodies Prof. G. Frederick Wright's letter to this journal a year ago touching the "Discovery of a Palæolithic Implement at New Comerstown, Ohio," in very interesting circumstances as respects the existence of primitive man on this continent during the ice age. The pamphlet is illustrated with numerous prints and maps. In *Science* for June 26, by the way, Prof. Wright describes the stupendous glacial grooves on Kelly's Island, near Cleveland, O., of which a sample has been saved and deeded to the Western Reserve Historical Society by the corporation engaged in making lime of the rock thus scored. The groove or trough is thirty-three feet wide and seventeen deep, and will be preserved to the extent of 100 feet, one-half cleared of the glacial débris, the other half still covered with pebbles and sand, and the whole (after being quarried around) left on a pedestal about thirty feet high.

The last number of *Petermann's Mitteilungen* contains an interesting account of the increase of the land, by artificial means, on the west coast of Holstein between the mouths of the rivers Elbe and Eider. It is illustrated by three maps showing the contour of the coast in 1500, 1750, 1890. The article is written in opposition to the view maintained by some that the shallows of the North Sea were in historic times dry land and thickly populated. Dr. Ferdinand Blumentritt describes the different native tribes who inhabit the basin of the Rio Grande on the island of Mindanao, one of the Philippines. Among some of them human sacrifices, in case of death, are frequent, slaves or captives being chosen for this purpose. They have also the belief that man has two souls, one of which goes to heaven, the other to hell, there being "no absolutely good nor wholly evil man."

The Bulletin of the Société de Géographie contains accounts of a French political mission to Tademayt in the central Sahara and a voyage on the upper Niger as far as Timbuktu, in which the author, Lieut. G. Jaime, explains the strange peculiarities of the current and the annual flood of the stream at this point. M. Ch. Rabot continues his report of his explorations in Russian Lapland, the present paper being devoted to the geology of the peninsula of Kola. There is also an interesting account of Tourane on the coast of Annam, a port which promises to be of great importance, mainly on account of the coal mines which have been discovered in the neighboring hills. M. H. Coudreau vigorously combats the commonly received opinion that the Indians in French Guiana are nearly extinct. He maintains, on the contrary, that their numbers are as great to-day as at the time of the discovery of the country, and, in proof of his assertion, gives the names of fifty-three distinct tribes, with a brief account of each.

The just-issued Bulletin of the American Geographical Society possesses especial interest by reason of what relates to Mr. R. E. Peary's promising expedition to North Greenland, now on its way. One of his comrades, whose qualities he has tested in Nicaraguan jungles, is Matthew Henson, a colored Virginian, twenty-three years old. Mrs. Peary will accompany the party as far as its base at Whale Sound.

We can but think it of ill omen that the New York State Teachers' Association, in its meeting this week at Saratoga, has been provided with an elegant programme stamped with the "compliments of American Book Co." Such a favor ought not to have been accepted from any publishing house, and least of all from one which, however legitimately, tends towards the chief control of the supply of text-books all over the country.

A practical result of the passage of our Copyright Act has been the establishment at No. 208 Fifth Avenue in this city, under the auspices of Count E. de Kératry, of a French Copyright Office, with Mr. Paul Meyer for Secretary. It will be the sole representative, for purposes of reproduction, translation, adaptation, or dramatization, of the Société des Gens de Lettres, the Société des Auteurs, Éditeurs et Compositeurs de Musique, the Société des Auteurs et Compositeurs Dramatiques Français, and the Cercle de la Librairie, which consists of the publishers and printers of France. The first-named society controls the works of Dumas *fils*, Zola, Daudet, Halévy, Ohnet, Coppée, Malot, Claretie, Maupassant, and other well-known writers; the second, the plays of Sardou, Dumas, Pailleron, Meilhac, Massenet, Ambrose Thomas, Gounod, Saint-Saëns, and others.

—A translation of Prof. August Meitzen's work on Statistics appears among the annals of the American Academy of Political and Social Science. The work consists of three parts: History, theory, and technique. The historical portion is of value chiefly as a bibliography, although it does not purport to be complete. That upon technique is of interest exclusively to those engaged in the actual preparation of statistics, and by them will be found full of suggestions of great practical utility. The emphatic insistence upon the necessity of proceeding according to a *plan* might well arouse the attention of our Census Bureau. The most important part relates to the theory of statistics. The method of investigation is the enumeration of objects and the comparison of results. The first step is to fix the essential characteristics of the unit of enumeration, and these must not vary during the period of observation. First classify and then count, is the fundamental maxim. Only those who have occasion to study statistical returns can understand the full meaning of this principle. The other precepts of the author are equally sound, and he fully recognizes the little known truth that the true essence of statistics is the application and development of logic. For lucidity and scientific precision we should advise the student of statistics to go to John Mill; but if it be thought indispensable to derive knowledge through German sources, we do not hesitate to say that Prof. Meitzen is a safe, if not an easily followed, guide.

—It is nearly twenty-five years since there appeared the first edition of 'Lyra Elegantiarum,' edited by Frederick Locker, and the anthology has always been accepted as the best collection of the "familiar verse"—to use Cowper's phrase—of our language. Now a new and revised and enlarged edition has been prepared by the editor (who signs himself to-day "Frederick Locker-Lampson"), assisted by Mr. Coulson Kernahan (London: Ward, Lock & Co.). The editor's admirable prefatory discussion of the essentials of the higher *vers de société* is expanded to contain an apt quotation from Mr. Austin Dobson's essay on Praed. The original arrangement of the book is not modified, the added poems being contained in an appendix of some seventy pages. As before, the collection is confined to the verses of poets not now living—and a reference in the preface reveals to us that Mr. Locker-Lampson has not yet heard of the death of John G. Saxe. The great gain to the new edition is in the inclusion of selections from Landor and from Thackeray not contained in the earlier edition because of the objection of the holders of the copyrights. A suppressed portion of the first edition had certain verses by Landor speedily withdrawn from the later copies. Mr. Locker-Lampson now gives us ten poems by Thackeray and nearly four times as many by Landor, most of these latter being very brief. Among the other poets who appear here now for the first time are Calverley, Mortimer Collins (though we miss his "Ad Chloen, M. A."), H. S. Leigh, Lord Houghton, and Browning. The most remarkable omission is Longfellow, half-a-dozen of whose poems would fall well within the definitions of Cowper, Mr. Locker-Lampson, and Mr. Austin Dobson. We note that one of the few blunders of the first edition, the ascription to Sheridan of the brilliant epigram,

"Lord Erskine at woman presuming to rail,"

is now corrected, and the lines at last bear the name of their real author, Matthew Lewis ("Monk" Lewis).

—The current *Revue d'Histoire Diplomatique* contains an account of "Philhellenism in France," by Mr. Demetrios Bikelas, whose translations of Shakspere have made an epoch in the written speech of modern Hellas, and whose 'Seven Essays on Christian Greece,' recently translated by the Marquess of Bute, give a dispassionate summary of what the Hellenes of to-day have already accomplished, and a forecast of their future. As early as the fourth century B. C., Ephorus awards the epithet of Philhellenes to ancestors of Brennus, who proved himself a pioneer of French Philhellenism by his inconvenient appreciation of the Delphian sanctuary. Then came Frankish potentates in the Ægean whose Philhellenism was more questionable. Ariosto and our own Milton were friends of the down-trodden Greeks, and Voltaire counts as a Philhellene, although he did protest too much in order to humor the "projet grec" of Catharine of Russia. Little good and much harm came to the Greeks from this scheme of hers, inherited perhaps from Peter the Great, self-styled the "Russo-Graecorum Monarcha." Betrayed by Russia, the outraged Greeks slowly awoke to the cry of liberty from revolutionary France. It was as a Greek that Coray received his *carte*

de sûreté from the Convention. If the Greeks were long in abandoning the delusion that help would come from without, and in recognizing that an enslaved people is its own and only deliverer, Europe and France were longer still in discovering that Hellas once more, as of old, had chosen liberty or death. Censorious reports from self-complacent travellers conspired with a surviving religious prejudice to prevent the Western world from easily recognizing the indomitable nobility of purpose which underlay the Greek revolution of 1820. But, this once recognized, the circle of Greek sympathizers was soon so large that it included all just men. The price which the Greeks paid for this great boon was not a small one, however. It was earned by their dauntless courage and their undespairing fortitude. The Holy Alliance, to be sure, remained steadfast in the wrong, nor did diplomacy waver in support of oppression. The power which finally prevailed against them both was organized public opinion. Viewed in this light, nothing can have a more universal interest than the vivid play of conflicting opinions which Mr. Bikelas so well succeeds in picturing. He shows how, under the pressure of events in Greece, what was at first only a party cry ended by enlisting all classes and all opinions. Sympathy for Greece and the Greeks overrode all differences in politics, silenced the clamors of religious fanaticism, flung to the winds the protocols of peradventurous diplomacy, and finally played a decisive part in rending asunder the Holy Alliance itself.

—A volume which might be read with interest in connection with Talleyrand's Memoirs, and serve in some respects as a counterpart of them, is the recently published Diary of the Archduke John of Austria ('Aus dem Tagebuche Erzherzog Johanns von Oesterreich, 1810–1815,' Innsbruck: Wagner), admirably edited and annotated and provided with a valuable historical introduction by Dr. Franz Krones, Professor in the University of Graz. This work, as the title indicates, forms only a part of the voluminous posthumous papers which the Archduke carefully arranged, revised, and corrected shortly before his death on May 10, 1859, and bequeathed to his only son, the lately deceased Franz, Count of Meran, and covers the brief but eventful period from the Peace of Vienna (October 14, 1809) to the Congress of Vienna and the formation of the German Confederation in 1815. He had the misfortune as an inexperienced youth of eighteen to command the Austrian forces which were sent to repel the invasion of the French Army under Moreau, and lost in rapid succession the battles of Hohenlinden and Salzburg. Nevertheless, as compared with other scions of the Hapsburg stock, he was a man of superior ability and fine character, and it was his noble personal qualities rather than his military disasters that drew upon him the ill will of his brother, the Emperor Francis I., and excluded him for many years from any important participation in public affairs. He thus had ample leisure to watch the current of events, was a near and keen observer of them, and, although looking at things uniformly from an Austrian and archducal point of view, shows for the most part in his judgments remarkable discernment, as well as a sincerely liberal spirit and no small amount of political foresight.

—He appreciated the genius of Napoleon, but was never fascinated by him, and has only expressions of contempt for Marie Louise. Their son, the King of Rome, he describes as "a handsome boy, blonde, blue-eyed, with the features, defiant look, soul, and spirit of his father; if well educated he may amount to something." The restoration of the Bourbon line and the return of the whole rabble of emigrants he regarded as a great misfortune for France and for Europe, and favored the recognition of Napoleon's son as constitutional sovereign and the appointment of a regency. He maintained that there was far more to fear from Russia than from France, since the aggressiveness of the latter was due to the ambition of a single man, and therefore accidental, whereas that of the former was part of a system, and therefore a permanent peril to western Europe. For this reason he favored the redintegration of Poland as a bulwark against northern barbarism, which ought to be pushed back to its natural boundaries on the Niemen, the Dnieper, and the Dniester, and kept there. He deemed it a great mistake for Austria to reclaim her Italian provinces (except Venice), and thought that she ought to look eastward for an extension of territory. Alsace should be united with Baden, to which it belongs geographically and ethnographically. The neglect to do this, he declared, would be fraught with danger for the future. The Tyrol was to be an independent state in perpetual alliance with Switzerland; all northern Italy, except Venice, was to constitute a "kingdom of Lombardy," and Rome as a free city to be the residence of the Pope, who was to be supported by the contributions of Catholic sovereigns. Such are a few of the suggestions made in 1814 by the Archduke as to the reconstruction of the political map of Europe. All "this wretched bargaining in peoples and countries," which the Congress of Vienna carried on, was exceedingly disgusting to him. Perhaps the most interesting portions of the volume are his characterizations of some of the princes and diplomatists who were there gathered together like vultures over the carcasses of nations. Foremost of these was Talleyrand, with a sound head but "a worm-eaten heart." He expresses high esteem for the Crown-Prince Ludwig (afterwards Ludwig I.) of Bavaria, mistrusts "the philanthropic ideas and smooth words" of the Czar Alexander, and praises the "good, open soul" of Prince William of Prussia, subsequently Emperor of Germany. We may add that the Diary is largely made up of memoranda hastily jotted down, often under strong feeling and without any regard to literary expression, and is not to be compared with Talleyrand's Memoirs for finish and fascination of style.

THE LIFE OF LAURENCE OLIPHANT.

Memoir of the Life of Laurence Oliphant and of Alice Oliphant, his wife. By Margaret Oliphant W. Oliphant. 2 vols. Harper & Brothers.

A SPECIMEN more curious than this biography sets before us is probably not to be found in the whole psychological museum. The writer in the opening sentence speaks of Laurence Oliphant as "a man unique in himself"; she might almost have said, "two men unexampled in their union." The story of Dr. Jekyll and Mr. Hyde was nothing but an extravaganza. The existence of two characters in one man would be inconsistent with personality. A man cannot have two consciences. Any variation of dominant passions or motives in a mixed nature at different times is conceivable, but duality with distinct alternation is not. A man, however, though he cannot have two characters, may, in a way, live two lives. This may be said of professional men, or a politician who has a private pursuit to which he is greatly addicted. It may be said even of a man who combines strong social tastes with devotion to business or study. Horace Walpole tells us that his father, when he sat down at table, always forgot that he was First Minister. The present Prime Minister of England is understood in his leisure hours to devote himself ardently to chemistry; and his life in the laboratory must be separate from his life in his office and in Parliament. In a deeper sense it may probably be said of any man who has spiritual aspirations that he must live two lives—to himself a life of aspiration, to the world a life of conformity and compromise. If spiritual life is a reality, in this sort of inner being it would seem to be manifested. But here we have the history of a man who lived two lives not only distinct, but so strangely contrasted with each other that, if we did not know it was impossible, we might think we had a veritable case of Dr. Jekyll and Mr. Hyde, only that neither of Laurence Oliphant's personalities is wicked.

Laurence Oliphant's normal life, we suppose we should say, was that depicted by himself in his 'Moss Gathered by a Rolling Stone' and 'Episodes in a Life of Adventure.' Viewed in this aspect, he is akin in character to that class of English adventurers of which Rajah Brooke and Gordon were specimens, and whose errant activity has done so much to build up the British Empire, though he never found for himself work so serious or so continuous in its aim as either Rajah Brooke or Gordon. He possessed in the highest degree all the qualities of the adventurer—courage, quickness of insight, and fertility of resource—as well as unbounded restlessness, bodily vigor, and an inexhaustible fund of animal spirits. He refuses to be sent to college; to a regular education he prefers the education to be obtained by wandering; he wanders forth accordingly and wanders to the end of his days, from time to time taking up diplomatic employment, embarking in different schemes, political, philanthropic, or commercial, generally collecting as he goes materials for books, and sometimes acting as correspondent for the London *Times*. He is a mixture, in fact, in his ordinary life, of the adventurer and traveller with the diplomat, the bookmaker, and the war correspondent. In the interludes of wandering and adventure he is a bright star in London society; he is a keen social satirist; for a time he is a member of the House of Commons. As a boy he lived for some time in Ceylon, of which his father was Chief Justice. There he himself practised law and had the distinction of being in twenty-three murder cases before he was himself as many years old, murder cases in Ceylon being probably disposed of more expeditiously than in the United States. He tried law afterwards in England, but that harness did not suit the steed.

Coming with his father to Europe, he visits Italy, then seething with revolution, in which his boyish spirit already revels. He has the pleasure of helping one mob to burn the Austrian arms and another to sack the Propaganda. Presently we find him making a tour in Russia, where travelling was then rough enough to be exciting, and penetrating to the Crimea, his knowledge of which, and of the defences of Sebastopol, made him an oracle when the Russian war broke out and Sebastopol was to be attacked. Next he is at Washington, as Secretary to Lord Elgin, "floating through the Reciprocity Treaty on champagne," and drinking plenty of champagne himself as well as flirting on a large scale with

the Washington girls, whom he finds very pretty and attractive, while his description of the habits and manners of the politicians, especially of the Democratic Senators, whose society he and his chief specially cultivated for a diplomatic purpose, makes us thankful that those times are past. Going with Lord Elgin to Canada, he leads a very gay life in society, continues to flirt assiduously, and studies diplomatic arts at the same time. He becomes head of the Indian Department, which he proceeds to reform, for he is full of plans for regenerating the world wherever he goes. His aim at this time was diplomacy, and had he not been a rolling stone he might evidently have risen in the service. But regular employment of any kind was irksome to him.

His next leap is to the siege of Sebastopol, of which a glimpse is given us by his pictorial pen, vivid as the flashes of the cannon which he saw through the night from the deck of his ship. He took with him dubious credentials from Lord Clarendon to Lord Stratford de Redclyffe, whom he hoped to enlist in his scheme of making a diversion in Circassia by a junction with Schamyl. His scheme was applauded but not adopted. However, he went himself to Circassia, plunged into the fighting as he always did when he had a chance, showed himself a born conqueror by building a battery, and ran highly satisfactory risks of his life. Adventures he sought, and fortune supplied him with them wherever he went. From the romance of ordinary adventure he rises to that of piracy, or something near akin to it, when, revisiting America, he joins the expedition of the filibuster Walker, drawn evidently much more by the fun than by the promise of a handsome share in the fruits of the expedition. In this passage of his life he showed, his biographer truly says, "extraordinary detachment and independence of mind." Then he joins Lord Elgin in the expedition to China, where, as usual, he plunges into the fray. Anon he is at Turin, where he "finds it great fun to have another object than churches and picture galleries"; the object being in this case to stir up opposition to the annexation of Nice by "that blackguard Napoleon III." Failing in this, he consoles himself by thinking of the money which he would get for two articles in *Blackwood*. Anon the Polish insurrection attracts him, and he once more "enjoys the pleasure of fishing in troubled waters," without catching any fish. His lively despatches remain to us a pleasant proof that he was a correspondent of the London *Times* in the Franco-German war.

A financial raid upon the New York Stock Exchange is a comparatively prosaic affair. Towards the end of his life, and when his wild spirit had been tamed not by years alone, and his adventurousness had taken a religious hue, he was engaged in an extensive scheme for planting Jewish colonies in Palestine, which did not come to much at the time, but the history of which may throw some light on a desperate question at the present day. Mark that while Oliphant pays now and then a faint tribute to Christianity by declaring that war is against his principles, not only is he personally fond of fighting, but his voice is practically for war; and he is deeply chagrined when peace is made with Russia. Mark that when he joins Walker he is ready not only for war, but for war such as the most worldly morality would condemn, and that nothing but the intervention of the British squadron saved him from being a party to the acts of a buccaneer. Mark, also, that he is a pretty strong Jingo, and can feel a sympathy with arbitrary and sanguinary violence. The Jamaica massacre under Gov. Eyre was a hideous outpouring of the murderous hatred and panic of a dominant race upon a helpless peasantry, while the judicial murder of Gordon by Eyre was the dastardly assassination of a personal enemy. Yet Oliphant is very angry because some Englishmen tried to vindicate humanity and the honor of the empire by bringing the Governor to the bar of British justice. So we learn from the 'Episodes in a Life of Adventure.'

With this life of wild adventure and social brilliancy combined stands in extraordinary contrast Oliphant's life as a religious enthusiast and devotee. He had a very religious mother, a strict Evangelical, whom he greatly loved and with whom he always kept up religious intercourse and correspondence. Hence, in the midst of his escapades and his levities, he was always from time to time turning his thoughts to religion and meditating on his own spiritual state. We find him when a boy at school, and rather a scapegrace, confessing in a letter to his mother his "besetting sins," his not saying his prayers as he ought, his hiding the naughty things which he did from the master's eyes, "not thinking that the eye of God is upon him, a greater eye than man's," and his "cribbing things from other boys, which is another word for stealing—not exactly stealing, but leads to it." This goes on when he is grown up, his tender and confidential relations with his mother remaining unimpaired, amid all the "furious flirting" and the boisterous fun. The youngsters gathered round him on the deck of a steamer are astonished by the theological turn suddenly taken by his talk. Every now and then we have a curious bit of spiritual self-analysis. Laurence discovers his great weakness to be "flexibility of conscience joined with a power of adapting himself to the society into which he may happen to be thrown." He comes to the conclusion, true enough, perhaps, but singular as a maxim of self-culture, that wild gayety is less injurious because less deadening to the spiritual sense than moderate dissipation. His mind, when he rests from wandering, combat, or diplomatic scheming, is given to theological questions; and such items as "The Third Person of the Trinity" are curiously mingled in the table of contents with items of a highly terrestrial kind. He also when in London took an active part in philanthropic enterprise, especially in attempts to reclaim the people of the London slums. He seems to have gradually emancipated himself from the formularies of his mother's evangelicism, and even to have got pretty far on the latitudinarian road, for he says that he would be content to live in a dungeon for the rest of his days if he could have a supernatural revelation—implying that one had not yet been vouchsafed to him. To his mother's appeal to him not to set up his reason against faith, he shrewdly replies: "You must remember that the fact that we believe many things we don't understand does not prove that when we don't understand a thing we should believe it." All dogma, in fact, began to appear hollow and became distasteful to him. His contact with many religions and with types of virtue which were not Christian, would combine with the anti-metaphysical influence of a life of intense activity to breed in him indifference to formal creeds.

Ever present and with growing vividness to his mind is the mournful contrast between Christian doctrine and Christian practice, both individual and national. This is the dominant idea in all that he says upon these questions in his social satires, especially in 'Piccadilly,' as well as in his private reflections. He saw with a keen eye, and with a scathing pen proclaimed, that though people punctually recited the creeds and not less punctually read the Sermon on the Mount in churches, neither personally nor as a community did they attempt to act on the altruistic principles of Jesus of Nazareth or to live his life. Whether it was possible to act on the principles or to live the life of Jesus of Nazareth amidst the civilization of Europe in the nineteenth century, was a question which seems never to have distinctly presented itself to his mind. In 'Piccadilly' he says:

"We have become so steeped in the insane delusion, now many centuries old, that we are a Christian nation, that I anticipate with dread the reaction which will take place when men awaken to the true character of the religious quackery with which they have been duped, and, overlooking in their frenzy the distinction which exists between ancient and modern Christianity, will repudiate the former with horror, which, after all, does not deserve to be condemned, for it has never yet been tried as a political system in any country. Individuals only profess to be theoretically governed by it. Nor would it be possible, as society is at present constituted, for any man to carry out its principles in daily life. That any statesman would be instantly ruined who should openly announce that he intended to govern the country on purely Christian principles, may be made clear to the simplest comprehension. For instance, imagine our Foreign Minister getting up in the House of Commons and justifying his last stroke of foreign policy upon the ground that we should 'love our neighbors better than ourselves,' or penning a despatch to any Power that we felt 'persecuted' by blessing it. When do we even do good to anybody in our national capacity, much less to them 'that hate us'? We certainly pray like Chinamen when we want to propitiate an angry Deity about the cattle-plague; but who ever heard of a 'form of prayer to be used' for nations 'who despitefully use us'? Fancy the Chancellor of the Exchequer informing us that instead of laying up for the nation treasures upon earth, he proposed realizing all the country possessed and giving it to the poor."

This dominant idea is the key to the otherwise inexplicable lapse of a shrewd, keen-witted, satirical man of the world into slavish subjection to the influence of a religious pretender, and explains to us the astounding scenes which follow. Mr. Harris, founder and despot of the Brocton or Salem-on-Erie community, and the tyrant of Oliphant's soul, was an American. He walked from the beginning shrouded with a mystery which never was completely dispelled: this no doubt formed partly the secret of his influence. That his importance began in sincere self-delusion is likely enough: religious imposture usually does. Mrs. Oliphant says that his sermons, which were printed in a rough form, are instinct with high religious spirit. He could never have gained the ascendancy which he did over such a man as Oliphant if he had not been a man of rare gifts in his way. Evidently he was of a type far above the founder of the Oneida Community. He might have been a Loyola on a more favorable field. Not Loyola himself understood human nature from a particular point of view more thoroughly, or had a more deadly power of spiritual domination. We have a personal sketch of him in 'Masollam,' written when the imposture had been unmasked and the idol had been cast down. It depicts, as might be expected, an imposing and fascinating, though equivocal, personage, endowed with mystery of expression, voice, and manner, as well as of mind. How were Oliphant's sharp eyes blinded at first to that which they saw so clearly in the end? Wherein did the fatal spell consist? It consisted, we believe, in this, that Harris preached no dogma but "The Life." He pre-

sented Christianity not as a creed or a form of worship, but as a practical annihilation of self. This exactly jumped with Oliphant's dominant idea. Ordinary escapades were in some sort a preparation for a religious escapade, and the "remarkable detachment and independence" shown in joining Walker's filibustering expedition were shown also in joining the Brocton community. The result, however, was a submission to the "Father," not only entire but prostrate and abject. No neophyte of the Society of Jesus could do more.

Oliphant is ordered to the Brocton community for his period of probation. The picture of the Community presented to us is not very distinct, its clearest feature being the absolute despotism of the Father, who disposes not only of the actions and the worldly goods, but of the affections of his spiritual thralls, according to his paternal will. Natural affection is to be killed: people are grouped by Harris according to their magnetic affinities; there is, in fact, to be only one tie—the tie to Harris. Marriage is permitted under Harris's authority, but cohabitation apparently is not. There is no formal worship, but there is mysticism without end. There is even casting out of devils, which, one would think, might have opened Oliphant's eyes. Labor is the religion of the community, and through labor sanctified by faith and self-sacrifice the community is to transform the world into the likeness of Christ, filling the Father's pockets by the way. It is called by its members the "Use," to denote its practical character, and to its Master it is a "Use" indeed. The criminal weakness of submission to the will of another man on moral questions is disguised by Oliphant to himself under the pretence that by some mystical union of spiritual "breaths" the will of Harris is his own, and that God moves them both at the same time. Oliphant was in Parliament with a fair prospect of success; but the first trial of his obedience is submission to the Father's command never to speak in the House, and thus to forfeit the selfish hope of distinction. While under probation at Brocton, he is sent to sleep in a loft containing only orange boxes and one mattress. His work is wheeling barrows of dirt and rubbish. He is not allowed to speak to any one. When he comes home dead-beat at nine o'clock, he is sent out again to draw water till his fingers are almost frost-bitten. He is set to cadge strawberries along a railway line. When his mother, who shares the delusion, joins him at Brocton, she too, a delicate lady, is put to the most menial work, and, by a politic refinement of spiritual tyranny quite worthy of Loyola, is forbidden any maternal intercourse with her darling son.

After probation, Oliphant is sent back to work in the world at his ordinary employments, though for the holy objects of the Community. He goes to New York to promote a commercial company, and to France as the war correspondent of the London *Times*. But the far-reaching hand of the "Father" is still on him, and he is recalled from France by what he had now become sufficiently enthralled by this strange superstition to take for a supernatural sign. But this is not the worst, or anything like the worst. Oliphant falls in love with a woman whom the biographer paints as divine, and whom all who knew her thought most charming. She accepts his love, and he rapturously proclaims his engagement. But the Father lays an embargo on their marriage, and there is a miserable correspondence, in which Laurence labors to persuade his Alice to resign herself to the Father's will. Alice, whose spiritual temperament resembles that of her lover, does submit, and she, too, allows herself to be brought under the influence of the Father. At last that personage is graciously pleased to sanction some sort of mystical union, taking care at the same time to get the whole of Alice's property into his hands; her husband, sad to say, betraying the demoralizing influence of fanaticism by allowing himself to equivocate on that question. But afterwards he ordains the separation of the husband from the wife, and to this also Oliphant meekly submits. We doubt whether a more signal proof of spiritual influence was ever given than this enforcement on the author of 'Piccadilly' of a command which he ought to have rejected if it had come to him as a voice from Heaven. Alice is brought to Brocton and in her turn put to the probation of menial work. At first she is allowed to live with her mother-in-law, Lady Oliphant. But afterwards, the Father fearing perhaps that their combined intelligence may hatch treason, they are separated and Alice is ultimately sent away to California, all alone and without money, to engage in the drudgery of teaching a small school for pupils of the lowest class. The Father himself had by this time migrated from Brocton to California, where he was engaged in raising vines. Oliphant humbly sues to him for permission to join his wife. Poor Lady Oliphant ends her days miserably under the tyranny. In the end a visit to the Father in his Californian abode leads to the discovery of his real character. Among other indications, a ring, which, among the rest of the property of his debtors, he had taken into his holy keeping, appears on the finger of a member of his household. So the veil of the imposture is rent asunder and the false god is deposed. But the Father had secured the property of his children, and it was only after a lawsuit that some land at Brocton purchased by Oliphant was wrested out of his hands.

Laurence and Alice are reunited, and the short remainder of their joint lives is spent happily and picturesquely in the East, where Oliphant is occupied with his Jewish colonization. But the man once so shrewd and sensible had become incurably mystical. He was still full of "sympneumatics" and all kinds of transcendental and ecstatic bosh. A believer in Spiritualism, of which in his saner days he had kept himself clear, he exhibited a set of bad verses, which of course he had written himself, as having come to him from the other world. Worst of all, he took it into his head at one time that his lovely wife was not his real counterpart, and that he had a real counterpart "on the other side"—that is, as his biographer says, in heaven. His character belongs to a period of transition which, though fruitful of eccentricities, has hardly produced a greater or a more notable eccentricity than Laurence Oliphant. We thank his biographer for her work, which has been well done.

JAMES'S PSYCHOLOGY.—II.

The Principles of Psychology. By William James, Professor of Psychology in Harvard University. [American Science Series, Advanced Course.] Henry Holt & Co. 1890. 2 vols., 8vo, pp. xii+689, and vi+704.

We have no space for any analysis of the contents of this work, nor is that necessary, for everybody interested in the subject must and will read the book. It discusses most of the topics of psychology in an extremely unequal way, but always interesting and always entertaining. We will endeavor to give a fair specimen of the author's critical method (for the work is essentially a criticism and exposition of critical principles), with a running commentary, to aid a judgment. For this purpose we will select a short section entitled "Is Perception Unconscious Inference?" Perception in its most characteristic features is, of course, a matter of association in a wide sense of that term. If two spots of light are thrown upon the wall of a dark room so as to be adjacent, and one of these is made red while the other remains white, the white one will appear greenish by contrast. If they are viewed through a narrow tube, and this is moved so that the red spot goes out of view, still the white one will continue to look green. But if the red light, now unseen, be extinguished and we then remove the tube from the eye, so as to take a new look, as it were, the apparent greenness will suddenly vanish. This is an example of a thousand phenomena which have led several German psychologists to declare that the process of perception is one of reasoning in a generalized sense of that term.

It is possible some of the earlier writers held it to be reasoning, strictly speaking. But most have called it "unconscious inference," and unconscious inference differs essentially from inference in the narrow sense, all our control over which depends upon this, that it involves a conscious, though it may be an indistinct, reference to a genus of arguments. These German writers must also not be understood as meaning that the perceptive process is any more inferential than are the rest of the processes which the English have so long explained by association—a theory which until quite recently played little part in German psychology. The German writers alluded to explain an ordinary suggestion productive of belief, or any cognition tantamount to belief, as inference conscious or unconscious, as a matter of course. As German writers are generally weak in their formal logic, they would be apt to formulate the inference wrongly; but the correct formulation is as follows:

A well-recognized kind of object, M, has for its ordinary predicates P_1, P_2, P_3, etc., indistinctly recognized.

The suggesting object, S, has these same predicates, P_1, P_2, P_3, etc.

Hence, S is of the kind M.

This is hypothetic inference in form. The first premise is not actually thought, though it is in the mind habitually. This, of itself, would not make the inference unconscious. But it is so because it is not recognized as an inference; the conclusion is accepted without our knowing how. In perception, the conclusion has the peculiarity of not being abstractly thought, but actually seen, so that it is not exactly a judgment, though it is tantamount to one. The advantage of this method of explaining the process is conceived to be this: To explain any process not understood is simply to show that it is a special case of a wider description of process which is more intelligible. Now nothing is so intelligible as the reasoning process. This is shown by the fact that all explanation assimilates the process to be explained to reasoning. Hence, the logical method of explaining the process of association is looked upon as the most perfect explanation possible. It certainly does not exclude the materialistic English explanation by a property of the nerves. The monist school, to which the modern psychologists mostly belong, conceives the intellectual process of inference and the process of mechanical causation to be only the inside and outside views of the same process. But the idealistic tendency, which tinctures almost all German thought not very re-

cent, would be to regard the logical explanation as the more perfect, under the assumption that the materialistic explanation requires itself ultimately to be explained in terms of the reasoning process. But Prof. James is naturally averse to the logical explanation. Let us see, then, how he argues the point. His first remark is as follows:

"If every time a present sign suggests an absent reality to our mind, we make an inference; and if every time we make an inference, we reason, then perception is indubitably reasoning."

Of course, every psychological suggestion is regarded as of the general nature of inference, but only in a far more general sense than that in which perception is so called. This should be well known to Prof. James, and he would have dealt more satisfactorily with his readers if he had not kept it back. Namely, perception attains a virtual judgment, it subsumes something under a class, and not only so, but virtually attaches to the proposition the seal of assent—two strong resemblances to inference which are wanting in ordinary suggestions. However, Prof. James admits that the process *is* inference in a broad sense. What, then, has he to object to the theory under consideration?

"Only one sees no room in it for any unconscious part. Both associates, the present sign and the contiguous things which it suggests, are above board, and no intermediary ideas are required."

Here are two errors. In the first place, "unconscious inference" does not, either with other logicians or with the advocates of the theory in question, mean an inference in which any proposition or term of the argument is unconscious, any more than "conscious inference" implies that both premises are conscious. But unconscious inference means inference in which the reasoner is not conscious of making an inference. He may be conscious of the premise, but he is not conscious that his acceptance of the conclusion is inferential. He does not make that side-thought which enters into all inference strictly so called: "and so it would be in every analogous case (or in most cases)." There is no doubt, therefore, that ordinary suggestion, regarded as inference, is of the unconscious variety. But Prof. James further forgets his logic in hinting, what he soon expresses more clearly, that such an inference is to be regarded as a mere "immediate inference," because it has no middle term. We might suppose he had never heard of the *modus ponens*, the form of which, A and B being any proposition, is

If A, then B;
But A:
Hence, B.

Those who think a light is thrown upon the ordinary process of suggestion by assimilating it to reasoning, assimilate it to the *modus ponens*. The proposition "If A, then B," is represented by the association itself, which is not present to consciousness, but exists in the mind in the form of a habit, as all beliefs and general propositions do. The second premise A is the suggesting idea, the conclusion B is the suggested idea.

Already quite off the track, our author now plunges into the jungle in this fashion:

"Most of those who have upheld the thesis in question have, however, made a more complex supposition. What they have meant is that perception is a *mediate* inference, and that the middle term is unconscious. When the sensation which I have called 'this' is felt, they think that some process like the following runs through the mind:

'This' is M;
but M is A;
therefore 'this' is A."

Those who have upheld the thesis are not in dispute among themselves, as represented. They make no supposition throughout not admitted by all the world. To represent any process of inference now as a *modus ponens*, now as a syllogism with a middle term, is not necessarily taking antagonistic views. As for the syllogism given, it is the weakest mode of supporting the thesis, far more open to attack than the form first given above. But Prof. James makes no headway, even against this. He says:

"Now there seem no good grounds for supposing this additional wheelwork in the mind. The classification of '*this*' as M is itself an act of perception, and should, if all perception were inference, require a still earlier syllogism for its performance, and so backwards *ad infinitum*."

Not one of the authors whom we have consulted makes the M entirely unconscious; but Prof. James says they do. If so, when he insists that "this is M" is an act of perception, he must mean some ultra-Leibnitzian *unconscious* perception! Has he ever found the German authors maintaining that that kind of perception is inferential? If not, where is his *regressus ad infinitum*? What those authors do say is that M, and with it the two premises, are thrown into the background and shade of consciousness; that "this is M" is a perception, sometimes in the strict sense, sometimes only in that sense in which perception embraces every sensation. They do not hold sensation to be inferential, and consequently do not suppose a *regressus ad infinitum*. But even if they did, there would be no *reductio ad absurdum*, since it is well known to mathematicians that any finite interval contains an infinite number of finite intervals; so that supposing there is no finite limit to the shortness of time required for an intellectual process, an infinite number of them, each occupying a finite time, may be crowded into any time, however short.

The Professor concludes:

"So far, then, from perception being a species of reasoning, properly so called, both it and reasoning are coördinate varieties of that deeper sort of process known psychologically as the association of ideas, and——"

We break the sentence, which goes on to something else, in order to remark that "a species of reasoning properly so called" must be a slip of the pen. For otherwise there would be an *ignoratio elenchi;* nobody ever having claimed that perception is inference in the strict sense of conscious inference. Instead of "a species of reasoning properly so called," we must read "reasoning in a generalized sense." Remembering also that Prof. James began by insisting on extending the controversy to association in general, we may put association in place of perception, and thus the conclusion will be, "so far from association being reasoning in a generalized sense, reasoning is a special kind of association." Who does not see that to say that perception and reasoning are coördinate varieties of association, is to say something in entire harmony with the thesis which Prof. James is endeavoring to combat? To resume:

"—— physiologically as the law of habit in the brain. To call perception unconscious reasoning is thus either a useless metaphor or a positively misleading confusion between two different things."

Here the section ends, and in these last words, for the first time in the whole discussion, the real question at issue is at length touched, and it is dismissed with an *ipse dixit*. There is no room for doubt that perception and, more generally, associative suggestion, may truthfully be considered as inference in a generalized sense; the only question is whether there is any use in so considering them. Had Prof. James succeeded in establishing his *regressus ad infinitum*, he would have refuted himself effectually, since it would then have been shown that an important consequence, not otherwise known, had been drawn from the theory. As it is, he says nothing pertinent either pro or con. But a little before, when an unconscious predication was called perception, was this perception "properly so called"? And if not, was calling it by that name a "useless metaphor," or was it a "positively misleading confusion between two different things"?

INDIVIDUAL LIBERTY AND STATE INTERFERENCE.

A Plea for Liberty: An Argument against Socialism and Socialistic Legislation. Consisting of an Introduction by Herbert Spencer and Essays by various writers. Edited by Thomas Mackay. D. Appleton & Co. 1891.

The Principles of State Interference: Four Essays on the Political Philosophy of Mr. Herbert Spencer, J. S. Mill, and T. H. Green. By David G. Ritchie, M.A. London: Swan Sonnenschein & Co. 1891.

NAPOLEON is credited with the apothegm that an army led by one bad general will do better than if led by two good ones; and the principle is illustrated by these two books. We need not go quite so far as Mr. Ritchie, who complacently observes that although his proofs were out of his hands before the 'Plea for Liberty' appeared, he found nothing in that work to make it necessary for him to alter any of his arguments; but there is some ground for saying, as he does, that the various writers do so much to weaken each other's positions that they render detailed criticism almost superfluous. The writers are substantially agreed in their dislike of Governmental meddling, but the grounds of this dislike are not altogether the same, and the arguments by which it is defended are incongruous. Their effect is the opposite of cumulative, and they amount in many cases to little more than cavilling.

The most conspicuous offenders in this respect are the authors of the essays entitled "The Impracticability of Socialism," "State Socialism in the Antipodes," and "Free Libraries." The first essay is sound enough, but wearisome; the second is disappointing in the vagueness of its charges in a case where definite proofs would be of exceptional value, and the third is but a railing accusation. The essay upon "State Trading as Illustrated by the Post-office" would be far more telling if its charges were supported, as they could have been, by properly authenticated evidence. The discussions of "Investment," "Free Education," "Liberty for Labor," and "The Discontent of the Working Classes" contain much that is suggestive, but the mode of statement is not so clear and forcible as to command assent.

On the other hand, the essay upon "The State and Electrical Distribution," which is by an electrical engineer, shows very effectively how the attempt of the Government to secure to municipalities the "unearned" profits to be derived by electric-lighting companies from their franchises, resulted in the practical suppression of the electric light for some years in England. Local authorities that own gas works, it seems, are ani-

mated by the monopolistic spirit of private corporations, and oppose competitive improvements. Upon the subject of the housing of the poor we have a really valuable contribution, showing the great progress that has been made in dealing with this matter by private persons and societies who have held fast to the principle that capital invested in sanitary dwellings should bring some return. It is the disregard of this principle by Government that renders its action so mischievous. The co-operative building and loan associations may be said to have made it possible in many communities for every deserving person to own his dwelling-house.

Mr. Auberon Herbert has the reputation of a doctrinaire, but his paper on "The True Line of Deliverance" is a model of good sense. He points out the fact that a great part of the evils under which we suffer are due, not to competition, but to restraints upon competition, and comes very near to demonstrating that all attempts in the direction of State restraint, however benevolent, tend to produce greater evils than they cure. The great improvement in the condition of laborers is largely due to increased facility of competition. On the other hand, the enormous outflow of English capital is probably due, to some extent at least, to the discouragement of enterprise caused by an accumulation of vexatious interferences with business in England. In a more general way Mr. Spencer expounds the superiority of voluntary coöperation to compulsory coöperation; and it must be said that his Introduction is as clear and powerful as anything he has ever written. He describes the situation in the following passage: "While elevation, mental and physical, of the masses is going on far more rapidly than ever before—while the lowering of the death-rate proves that the average life is less trying—there swells louder and louder the cry that the evils are so great that nothing short of a social revolution can cure them."

There is, indeed, no escape from the dilemma which Mr. Spencer offers to the Socialists. Labor must have some organization; if not that which arises by agreement under free competition, then it must be that which is imposed by authority. Hence there must be established grades of laborers, with enforced subordination of each grade to the grades above. If there is to be no voluntary exchange of labor for produce, there must be compulsory apportionment. There can be no voluntary abandonment of places by laborers. Every one must stay where he is put, do what he is told, and take what is given him. An army of supervisors must be employed, and their collective power would result in the practical bondage of those whose labor they would direct, who could no more escape from administrative despotism than soldiers can escape from military discipline. This, Mr. Spencer maintains, would be a return to evil conditions from which men have extricated themselves by the most prolonged and painful exertions.

Mr. Ritchie's book is meritorious in several respects. As a criticism of Mr. Spencer's position, it is clever, and as to some points conclusive, although rather needlessly contemptuous in tone. He exposes very neatly the inconsistency of maintaining the doctrines of individual liberty and of the "social organism" at the same time. It may sound very well to say that governments are not made but grow, but if it is to be taken literally, the consequences to political philosophy are serious enough. If we inquire whether the individual has any right to exist apart from the organic whole, we are brought face to face with our difficulties at once. Still, Mr. Ritchie finds it so hard to restrain his wrath in this polemic that he weakens his case a good deal.

This is not true of his examination of Mill's theory of liberty, and it is here that we find his book especially satisfactory. It brings out the issue between the two schools of thought, and contains in small compass those tenets upon which all socialistic systems must finally rest. In the view of Mill and of those who intelligently hold to individual liberty, "all restraint, *qua* restraint, is an evil." The other view, as Mr. Ritchie puts it, is that restraint has nothing evil in its nature, but is good or bad according to the purpose for which it is employed. From this he argues that the State, or the majority, may properly compel the individual to do what is for his own good and for the common weal. But the individualist insists that the proposition should be made to read—The State or majority may rightfully decide what acts the individual shall do, and compel him to do them; and he maintains that restraint in this sense, however practically necessary, is an evil. In proof of this, he appeals in the first place to experience, which shows that the State has constantly compelled action which is subsequently admitted to be wrong: those who in one age are persecuted as heretics are in the next revered as martyrs. And in the second place, he insists that it is of the essence of good action that it be voluntary. The fact that I am perfectly satisfied that another person ought to do a certain act, does not make it a good thing that I should force him to do the act against his will and conscience. And what is true of me is true of any number of human beings, or of the State.

By a common misconception this doctrine is thought to imply anarchy or the extinction of the reign of law. This error will be avoided by those who reflect that the principle above stated requires the punishment of those who violate it. In the ideal state of the individualist, interference with liberty by the State takes place only in the case of those who interfere with the liberty of others. Here Mr. Ritchie's criticism becomes pointless, for he argues as if he thought Mill's view was that there was more liberty and individuality to be found among savages than among civilized men. It is equally absurd for him to represent Mill as holding that it is no function of law to overthrow the tyranny of custom, although we are quite sure that Mill would have gone to the stake rather than say, with Mr. Ritchie, that it is interfering "on behalf of individual liberty" when the State takes education from the hands of ecclesiastical bodies or close corporations. This proposition may be regarded as containing the very spirit and substance of Socialism, and we see no reason why religion should not be included with education.

The position of the individualists can be turned in only one way, as Mr. Ritchie clearly sees, and he accordingly denies the existence of any man as an individual being. In his philosophy—he is a believer in the Hegelianism of the late T. H. Green—man is a complex metaphysical entity, made up of a host of relations, especially relations to his fellows, and is so far from being a "plump and solid" individual that he is to be regarded as a cell in the social organism. The State is not a mere means to individual welfare; it is an end to itself. An abstract term, therefore, is regarded as a being of a higher order than an individual man. This abstraction has a consciousness and a conscience, it may be supposed, and its requirements for the attainment of its end justify its interference with the acts of individual men.

Green, however, made self-realization the end of man's existence, and held that the function of the State was to make it possible for men to realize themselves, although this could only be done within the State. Now, as the morality of an act depends upon the freedom of the agent from compulsion, self-realization implies freedom. But this is twisted by Mr. Ritchie into meaning that the State must put the individual into a position where he can act freely. Freedom of contract, he says, does not exist when the laborer agrees upon his wages with the employer, and the State must interpose. The State, therefore, or the majority, must determine in what welfare consists, and may rightfully impose its determination upon its subjects. Mr. Ritchie, it is true, would limit the action of the State by the lessons of experience; but having endowed the State with supreme power, his individual judgment cannot limit it, for that is to recognize a higher power. And herein lies the danger of Socialism, that it revives in the absolute power of the majority all the evils of despotism. We cannot criticise Mr. Ritchie's essay at length, but it will repay careful study.

Intentions. By Oscar Wilde. (The Decay of Lying. Pen, Pencil, and Poison. The Critic as Artist. The Truth of Masks.) Dodd, Mead & Co.

THESE four essays by Oscar Wilde are, we fear, likely to have scant justice done them. The second, which is a study of Wainewright, the artist-poisoner, Lamb's friend, and the fourth, which is mainly an inquiry into Shakspere's use of dramatic properties, or the resources of "staging," are merely quite admirable papers on their respective subjects, with nothing to startle or to amuse, and no more individuality than serves to give a pleasant liveliness to the style. The first essay, however, which is on what is commonly called idealism and realism, and the second, which is upon criticism, are of a different quality—of a nature, indeed, to make the injudicious grieve. In characterizing idealism as a mode of "lying," Mr. Wilde, as he takes pains to intimate, starts from a Platonic point of view, or at least maintains analogy with the poet-doctrine of the 'Republic'; but he does much more than frankly challenge the realists in defence of the artistic lie; he invents a succession of paradoxes so stunning to the commonplace mind that his object might fairly be thought to be the bewilderment of the Philistine majority rather than persuasion. When he affirms that it is more true that Life and Nature imitate Art than that Art imitates Life and Nature, that Art in no case reproduces its age, that the telling of beautiful untrue things is the proper aim of Art—which are his main propositions—he comes dangerously near implying, in the reader's mind, that the said reader is a fool. Though for our own part we most potently believe these things, we hold it not meet to have it so set down. And not only is Mr. Wilde's intellectual statement paradoxical, but the exposition of the doctrine is studded with epigrams, brilliant and amusing, of the sort that suggest trifling with the truth.

The effect might well be that, to the commonplace mind—and whom else does the author address in such an essay?—this superficial appearance of running amuck with all sensible people may well conceal the sound intelligence and acute penetration at the heart of these papers. Something, however, is to be allowed to a writer who is so painfully aware

of the mental dulness of his race. "Our splendid physique as a people," he says, "is entirely due to our national stupidity. I only hope we shall be able to keep this great historic bulwark of our happiness for many years to come." And after this he makes no concessions to his readers in the "middle class," but goes on in a fashion to make them stare. "Newspapers," he laments, "may now be absolutely relied upon. One feels it as one wades through their columns. It is always the unreadable that occurs"; and so he approaches the subject of realism, with a contrast by the way between the ancient historians, who "gave us delightful fiction in the form of fact," and the modern novelist, who presents us "with dull facts under the guise of fiction." A page or two of direct criticism leads up to the abstract discussion, criticism that has more than a grain of salt to the sentence. "Mr. James Payn is an adept in the art of concealing what is not worth finding. He hunts down the obvious with the enthusiasm of a short-sighted detective"—that is the swing of his critical broad-axe, and with it he despatches the heroes of the field as if he were lopping daisies. "'Robert Elsmere' is, of course, a masterpiece—a masterpiece of the 'genre ennuyeux,' the one form of literature that the English people seem to thoroughly enjoy. . . . It is only in England that such a book could be produced. England is the home of lost ideas." And then he passes into France, and comes round again to Meredith, whom he thinks well of. "As a writer he has mastered everything except language; as a novelist he can do everything except tell a story; as an artist he is everything except articulate." Nor is this the praise of a malicious spirit—not at all; it is meant for enthusiasm. All this criticism in detail is really subordinate to the general question, Is Art or Life and Nature the greater? and he answers it at once by a specific case again, instancing Wordsworth: "Poetry gave him 'Laodameia' and the fine sonnets, and the great Ode, such as it is. Nature gave him 'Martha Ray,' and 'Peter Bell,' and the address to Mr. Wilkinson's spade." Even in Shakspere he finds the same truth: "The passages, and they are many, where the language is uncouth, vulgar, exaggerated, fantastic, obscene even, are entirely due to Life calling for an echo of her own voice, and rejecting the intervention of beautiful style through which alone should Life be suffered to find expresssion"; and as for Nature, "Nature," he says, "is always behind the age." These quotations, which are (except the last) from the first score of pages in the volume, are enough to indicate the paradoxical and epigrammatic quality of Mr. Wilde's method of expression; for in the thought itself there is no such paradox as appears on the surface of the style. The substance is the old doctrine of idealism, old as what Mr. Wilde might call the first of Lies (and therefore of truths), the story of the Garden of Eden. The development of his notion that Life imitates Art, and that Nature also, though by the subtle assistance of man's eye, does the same thing, is excellently done, and with a freshness of illustration and a certain warmth that give his words attractiveness and force. The relation of Art to the age is less definitely made out than we could wish: there is no relation, he says; but denials as well as affirmations need explication often, and here more might have been said. The same doctrines in a certain sense underlie the essay upon Criticism, but the expression of them is different. It has the same logic, though the matter is of another kind. We content ourselves with quoting the summary of what he has "shown," namely, that it is "more difficult to talk about a thing than to do it, and that to do nothing at all is the most difficult thing in the world"; that "all art is immoral, and all thought dangerous; that criticism is more creative than creation, and that the highest criticism is that which reveals in the work of art what the artist had not put there; that it is exactly because a man cannot do a thing that he is the proper judge of it; and that the true critic is unfair, insincere, and not rational." Without subscribing to this creed unreservedly, we shall yet venture to confess that, so far as criticism is concerned, Mr. Wilde seems to us to have the truth of the matter, and to have carried the analysis of the art and its ideals further in certain definite ways than we have yet seen in any other such paper.

His style is unjust to his thought, and no one, we fancy, would be quicker than himself to acknowledge that he disagrees with what he has stated in particular places, if such statement were to be regarded as complete and final. The method of paradox and epigram necessitates too partial a statement of large truths, too exclusive and often very limited points of view; it cuts truth into too small pieces. It would be easy to pick up phrases and sentences here and there and make them ridiculous, but this ridiculous aspect is just the one that will appear to the commonplace mind without any effort on the part of anybody. It is rather our intention and pleasure to intimate that the reader will do a wise thing who tries to be more just to Mr. Wilde's thought than he has been able to be, and so to arrive at the substantial truth of which his essays contain more, both expressed and suggested, than is commonly to be met with nowadays. The defect of the volume is its cleverness and its yielding to a certain piquancy of style. In the essay on Criticism it is due to observe several passages of decorative prose that are really lofty in diction and noble in flow, and which, had they been a trifle less decorative, would have been eloquent in expression as they are in thought—passages in which the Greek shines through. At the end we almost relent—cleverness is so entertaining, and wisdom in the Aristotelian form can be had elsewhere; it is only in the interest of the too serious reader that we put in our caveat, and for his sake give warning that the most incredible paradox may be only an unusual and most interesting crystallization of truth.

Spain and Morocco: Studies in Local Color. By Henry T. Finck. Charles Scribner's Sons. 1891. Pp. xv, 182, 8vo.

In this entertaining account of a two months' outing in the peninsula Mr. Finck gives his impressions of some of the external aspects of Spanish and Moorish life. This is done in an easy, genial way which makes him a very agreeable companion as he wanders through the streets of Madrid and Seville, or rides from Tangier to Tetuan or through the cañons of the Sierra Nevada. At the same time he incidentally conveys a clear and truthful picture in outline of the present condition of Spain. He finds room in his narrative for occasional trivialities, and his humor is in places exuberant, but he has the merit of never being dull, or of taxing the reader's patience with labored descriptions of famous pictures or buildings. He is at his best in his sketches of street scenes, which are apt to escape the notice of most travellers, but which are very significant of the national character. Among them are to be found several charming genre pictures of child-life.

Entering the country from the north, his first stopping-place after Burgos, to which he devotes a few lines, is the capital. Here the fact that all classes meet on equal terms in the cafés, leads him to the conclusion that "the Spaniards are the most democratic nation in the world"; while their habit of turning night into day convinces him that in their waste of the morning hours "lies the main cause of Spanish decadence." A bull-fight was simply "the most unsportsmanlike and cowardly spectacle I have ever seen," which, it surprises us to learn, the women rarely attend. "As a rule there was not one woman to every three hundred men in those degraded audiences." At Seville (for he has nothing noteworthy to say of the intervening cities) he was so fortunate as to see the Corpus Christi ballet in the Cathedral:

"A dozen beautiful boys went through various simple evolutions, singing an air like a Mozart minuet, and accompanied by flutes and violins. Twice, in the concluding measures, the castanets were used, and these, associated with dance halls, did have an odd effect in the echoing cathedral. The musical effect of the performance was delicious, and none but the most bigoted could have taken offence at the dancing."

A pleasant description is given of Cadiz, which, as it lies seven miles at sea, may fitly be called the Spanish Venice. The glaring whiteness of its houses, however, is a serious drawback to the enjoyment of the beauty of its situation. Thence our traveller went to Tangier, six hours distant by steam, and he dwells at length on the familiar topics, the narrowness and filth of the streets, the shops, the market, the snake-charmers, and the dancing-girls. But most interesting of all is his account of the comparatively little known Tetuan and his ride thither. This town, he says, "is considered one of the headquarters of the Hebrew race," whose chief occupation is gold embroidery on velvet and silk. Notwithstanding they are comparatively well treated by the Moors, one of them, the British consular agent, "told me that many of his race are leaving Tetuan and emigrating to America, chiefly to Boston." At Gibraltar we are once more on familiar ground, and Mr. Finck does not again leave the beaten track, except to ride by diligence from Granada to Murcia "through one of the weirdest and wildest parts of Spain—a prehistoric region of cave-dwellers." In passing along the Sierra Nevada he finds the scenery to resemble strikingly parts of Arizona and Colorado. "The sides of these cañons and gorges are adorned with the most realistic carvings, sculpture, and architectural effects—complete houses, with doors and windows and picturesque castles. No *fata morgana* could be more perfect, and one would be inclined to believe in a human origin of these carvings were they not on too large a scale, and extending along miles of inaccessible precipices." Beyond this is a region

"which is densely covered with the mud homes of the Gitanas. Many of these homes are mere caves dug into the hillsides, as at Granada, some being on a level with the ground, and some farther up the perpendicular hillside, where it is a curious sight to watch the women moving about in their glaringly colored half-dresses, and the children as naked as in an African kraal. On all sides rise mounds and hillocks of various sizes, occasionally as large as castles, shaped like a mosque or a cone, and into these, too, the Gypsies and the poorest of the Spaniards have dug rooms, sometimes in two stories, and with a chimney on the top."

With a too brief notice of Alicante, Valencia, and Barcelona, the most thriving cities of

the peninsula, our author parts company with his readers—prematurely, as the majority of them will think. The volume is prettily made, and its scarlet cover suggests a guide-book function which we have no doubt it will frequently discharge.

Under a Colonial Rooftree: Fireside Chronicles of Early New England. Boston: Houghton, Mifflin & Co. 1891.

THE general appearance of this little book reminds one of 'Colonial Times on Buzzard's Bay,' which so quickly gained a second edition two years ago. Nevertheless, the two differ both in matter and in aim. Mr. Bliss's book enters rather deeply into colonial history, while this work reflects only here and there the image of some stirring colonial or Revolutionary incident. It has evidently been the author's purpose to put together those parts of her ancestral history which belong to the old family mansion near Hadley, and which are also of interest to the general reader. In her appendix she says the collection likewise owes its existence to her desire to "preserve the descriptions of life in his boyhood, taken from the letters of the late Theodore G. Huntington." The author is quite too modest if she thinks these passages are its principal attraction. Indeed, not all show enough descriptive power to give them much interest apart from the personality of the writer, especially if one happens to remember Charles Dudley Warner's wonderfully graphic pages in 'Being a Boy.' The great charm of the book lies in a certain diary which is much quoted, and which reveals to us something of the thoughts and the life of a strong and noble woman, Elizabeth Porter, Bishop Huntington's grandmother. Her life and her mother's remind us that, though Puritanism had its dogmas, harsh and even barbaric in the ideas of God which they represented, the Puritans, or at least many of them, had other things besides dogmas—a sturdy endurance and an unvarying faithfulness which excite our admiration. This diary is also interesting because it tells us how intelligent New Englanders in the remoter towns felt when they heard that the British were marching on Concord, and later, when they saw Burgoyne's captured army marching through their villages, and still later, in the chaos which, under the Confederation, led to Shays's rebellion.

It may seem ungracious to remark that the author, otherwise so careful, has fallen into two or three inaccuracies in the use of dates. She says the Fundamental Orders of Connecticut were drawn up in 1636, whereas they first saw the light three years later, and she puts the Boston Council, which invented the Halfway Covenant, in 1660, instead of in 1657.

Our Common Birds and How to Know Them. By John B. Grant. Charles Scribner's Sons.

THIS little volume is written for those who love birds and desire a speaking acquaintance with them, but have no aspirations for professional knowledge. The author frankly admits that the gun is indispensable to the professional ornithologist, but holds that any one who will follow his instructions and is possessed of the requisite patience may attain the former goal. In a pleasantly written chapter he tells the reader to equip himself with a note-book and opera-glass, instructs him how to conduct himself in the woods and fields, furnishes him with a list of the birds he is most likely to see, and also the dates in spring and fall when the migration of particular species may be expected.

Thus prepared, he suggests to the novice to walk abroad and watch the birds as they are busied in their various occupations, to see all he can, and to jot down in the ever-present note-book all he sees. By comparing his notes with descriptions in the books, and by means of an occasional visit to the museum, he will come, sooner or later, to know the common birds. No better plan, perhaps, can be devised for the amateur than this; but, however facilitated by such popular books as the present, the knowledge of birds still remains uphill work except for those possessed of abundant leisure, great patience and enthusiasm. There is no short cut to ornithological lore any more than there is to other kinds of knowledge.

The hints to beginners and certain remarks upon classification—the latter might better have been omitted as of no value to the novice—are followed by some ninety pages of text, in which are described ninety species, and by sixty-four plates. The descriptions are untechnical, as they should be, and are generally good, though too brief in some cases to be entirely clear; moreover, they relate only to the male birds. The females are wholly unnoticed, the space in the book and the trouble to the describer thus saved being at the expense of the student.

The illustrations have been produced in a manner which shows that by means of photographs of mounted birds reproduced cheaply in half tone and accompanied by brief descriptions, the student can be materially assisted in the labor of identification. But from the point of view of the naturalist the plates are very bad indeed. The attitudes of many of the birds are unnatural, though they are alleged to be "characteristic," and the forms are distorted. The mounting is slovenly and in defiance of the most ordinary taxidermic rules, though it is said to be the work of an "expert taxidermist." Such poor work is the more inexcusable as taxidermy has made rapid strides of late years, and the taxidermists in this country who are capable of mounting birds naturally and artistically are to be numbered by the score. To publish illustrations of such badly mounted birds as these at this late day is an offence against both nature and art. Moreover, the would-be teacher of ornithology should know the birds whereof he discourses. But of the sixty-four birds illustrated three are incorrectly named. Thus the "Phoebe" of Plate xiv. is a Wood Pewee; the "Northern Shrike" of Plate xlii. is the Loggerhead Shrike, and the "Wilson's Thrush" of Plate lxiii. is the Hermit Thrush. Apparently the author is not a graduate of his own school.

Chemistry in Space. From Prof. J. H. Van'T Hoff's 'Dix années dans l'histoire d'une théorie.' Translated by J. E. Marsh. Oxford: Clarendon Press; New York: Macmillan.

THIS little work is the first English translation of a remarkable pamphlet which appeared in Holland some years since, and which contains the history of the development of an important chemical theory which, if not even now universally adopted, has yet found many earnest advocates. The theory in question originated simultaneously in France and in Holland, and is due to F. A. Le Bel and J. H. Van'T Hoff, writing independently. In organic chemistry we meet with many instances in which two or more compounds have the same composition—that is to say, contain the same elements united in the same proportions—and yet exhibit wholly different properties. To a certain extent we can explain these differences by supposing that in a given case, for instance, the two bodies have different molecular weights or different internal structures. These modes of explanation sometimes, however, fail completely. Van'T Hoff and Le Bel first suggested that an explanation might be found in the different geometrical positions of constituent molecules or atoms. The theory has already been found to be of great service, and is steadily gaining ground among chemists. Mr. Marsh's translation of Van'T Hoff's work will be cordially welcomed as a considerable extension of the French edition, executed with the assistance and advice of the author.

Charles Macklin. By Edward Abbott Parry. Longmans, Green & Co. 1891.

IT was a shrewd stroke of editorial judgment on the part of Mr. Archer to single out the editor of 'Dorothy Osborn's Letters' to prepare the biography of Macklin for the Eminent Actors Series, and his judgment has been ratified by the result. Mr. Parry is not quite as acute in his dramatic perceptions as the author of the Life of Macready in this series, nor is he quite as learned in theatrical lore as the author of the Life of Betterton; but the Life of Macklin lags but little behind its predecessors. It is a conscientious piece of biography, carefully prepared, planned, and written. The chapter on Quin may seem like an excursus, but it is welcome; and its presence gives the volume a claim to a certain completeness as a picture of the state of the stage in England and Ireland in the years before the young David Garrick took the theatre by storm. Mr. Parry shows a wise scepticism as to Macklin's centenarianism; the old comedian's career is picturesque enough without this needless touch. On the other hand, the biographer is lacking in generosity, and we think in justice, in his references to David Garrick (on page 75). Garrick was not only the greatest actor the world has ever seen, he was also an honest man; though he moved forward often by devious ways, there was little in his conduct that was crooked. Macklin's two great claims to consideration nowadays are his one comedy, "The Man of the World," and his resuscitation of *Shylock* as a tragic part. To both of these Mr. Parry pays due attention. It is with something of a shock that we learn that the authorship of the couplet on Macklin's *Shylock*—

"This is the Jew
That Shakspere drew"—

may not be Pope's, despite the accepted tradition.

The book is worthily furnished with a list of the parts played by Macklin and another of the plays produced. There is an adequate index in which we note one misprint: Charles James Mathews's name should have but one *t*.

BOOKS OF THE WEEK.

Summer Reading.

The appearance of the first novel of so popular a story-writer as Mr. Thomas Nelson Page is a literary event of unusual importance. It is a welcome addition to the list of first-class American fiction, and it amply fulfils the promise of his charming short stories. The title of the story is 'On Newfound River'; the scene, Virginia before the war; and the characters the typical aristocrats, poor whites, petty politicians, and darkies, common to the time and place. It is a delightful romance. The heroine is sweet and the hero brave. The scenes and incidents are admirable—idyllic, pathetic, and dramatic. It abounds in shrewd character sketches, and has a plot that steadily engages attention. Altogether it is a distinctly strong piece of fiction, and one of the best novels issued in late years. (Charles Scribner's Sons. 12mo, $1.00.)

A collection of tales full of merit and promise is 'Gallegher and Other Stories,' by the young editor of *Harper's Weekly*, Mr. Richard Harding Davis. By these stories Mr. Davis has taken a sudden leap into well-deserved popularity. The field covered is New York city, and with its various phases of life Mr. Davis shows great familiarity, together with ready appreciation of the dramatic, pathetic, and humorous elements of human nature in all classes of life. His stories have much of the charm and power of Dickens's descriptions, while there is a finish in the rounding of each theme that suggests the French masters of fiction. Their pathos is deep and true, their humor fine and genuine, and their human nature realistic in the best and most graceful sesne of the word. (Charles Scribner's Sons. 12mo, cloth, $1.00; paper, 50 cents.)

Mr. H. C. Bunner is always a charming story-teller, so graceful, finished, and effective, and in 'Zadoc Pine and Other Stories' one finds a new collection of tales that will charm this author's many admirers. They are full of homely human interest, with sharp insight into the motives and feelings that animate our modern life in town and country, all buoyed by a delicate charm of gentle humor and geniality that makes them unique. (Charles Scribner's Sons. 12mo, cloth, $1.00; paper, 50 cents.)

The many readers who found Mr. Frank Stockton's 'Rudder Grangers' so entertaining on first acquaintance with them on the old boat, will find them no less so in the author's new book entitled 'Rudder Grangers Abroad.' It will be eagerly sought by all the old friends of Euphemia, Pomona, and Jonas, who will experience renewed delight in this continuation of the droll and mirth-provoking adventures of that unique family. The volume also contains several other new and capital short stories by Mr. Stockton. They are in his best vein—bright, cheery, and irresistibly humorous. (Charles Scribner's Sons. 12mo, cloth, $1.25; paper, 50 cents.)

For a leisure summer hour no better companion could be chosen than Mr. T. A. Janvier's 'Color Studies and a Mexican Campaign.' It was the charming sketches known as 'Color Studies' that first won Mr. Janvier distinction as an author, and all readers will welcome gladly this reissue of them, containing an additional story of considerable length in which the same characters continue their adventures in Mexico. No lover of light and graceful fiction should fail to make the acquaintance of Mr. Janvier. His sketches of character are delightfully unpretentious, they are touched with genuine humor, and they are always true to life. (Charles Scribner's Sons. 12mo, cloth, $1.00; paper, 50 cents.)

Mrs. Burnett's earlier stories have never an instant waned in popularity since they were first given to the public, and there is, therefore, excellent reason for the reissue in two volumes of those charming tales, 'Lindsay's Luck,' 'Miss Crespigny,' 'Theo,' 'Kathleen Mavourneen,' and 'Pretty Polly Pemberton.' Her characters are life-like and well drawn, while each narrative fairly brims over with sentiment of the purest and sweetest kind. (Charles Scribner's Sons. 2 vols., each, 12mo, cloth, $1.25; paper, 50 cents.)

Mr. John B. Grant's book, 'Our Common Birds,' holds a peculiar place of its own among books relating to out-of-door-life. It contains sixty-four illustrations from photographs of the birds, each illustration accompanied by a description of the bird's plumage, habits, and such other information as will enable one to recognize the familiar songsters. The illustrations are excellent and the text is simple. It is a fascinating book, not only a genuine help to the country rambler and lover of nature, but forming delightful reading. (Charles Scribner's Sons. Illustrated, oblong 12mo, *net*, $1.50.)

No one who seeks agreeable summer books can afford to overlook Scribner's popular Yellow Paper Novel Series. The volumes cover diverse enough subjects to suit almost any taste: they are brought out in attractive style, and are reasonable in price. The series includes some of the best-known works of Robert Louis Stevenson, Frank R. Stockton, Frances Hodgson Burnett, G. W. Cable, Joel Chandler Harris, H. H. Boyesen, and many other popular authors. (Circulars sent to any address by the publishers.)—*Advt.*

HEALTH AND VIGOR FOR BRAIN AND NERVES.

Crosby's Vitalized Phosphites,

From the vital principles of the ox brain and wheat germ, is the original and only preparation of the Hypophosphites from animal and vegetable tissue, conceded by scientists the most powerful restorer of the vital forces. Especially recommended for Brain Exhaustion, Impaired Vitality, and all forms of Mental and Nervous Disease. Invaluable in Bronchitis, and as a Preventive of Consumption.

Pamphlet with testimonials free. For sale by druggists. Sent by mail ($1) from 56 West 25th St., N. Y.

There are numerous imitations and substitutes.

None genuine without this signature printed on the label. ☞

School Trustees,
Principals,
Teachers,
And others interested, are invited to consider the advantages offered by the *Nation* as an advertising medium. School advertisements are printed in a uniform typography, with the address in the first line, classification being made by States, alphabetically, unless especially ordered displayed on other pages.

The *Nation*, in its special field of political and literary criticism, is unlike any other periodical, American or foreign. At least 10,000 copies are circulated weekly, but these figures do not accurately represent the number of its readers. It is taken by reading-clubs and literary associations in a large number of places, and may be found on file in every library of importance in the country. There are probably few weekly periodicals whose columns offer so favorable an opportunity for reaching an audience interested in educational matters.

Advertising rates, 15 cents a line each insertion, with the following discounts: 5 per cent. on four insertions, 10 per cent. on 8 insertions, 12½ per cent. on 13 insertions, 15 per cent. on 26 insertions, 20 per cent. on 39 insertions, 25 per cent. on 52 insertions.

The *Nation* is sent free while advertisement continues.

Orders may be forwarded through any responsible advertising agency, or directly to

"Contains a vast qu[illegible]ation on many subjects, generally arranged with much skill."—[illegible]

"The work of author and e[illegible]dmirably executed, and the result is that rarest of literary portents[illegible]at once comprehensive and readable."—*London Telegraph.*

Public Library of Boylston St. 2 Copies 28 Feb 92

Supplementary Notes to 'The Ice Age in North AMERICA.' A Summary of New Facts which have been published within the past two years. By G. FREDERICK WRIGHT, D.D., LL.D. Illustrated. 8vo, paper, 10 cents.

Memorials of St. Paul's School, Concord, N. H. A small volume, beautifully printed and bound, containing an account of the founding of the school by Dr. Shattuck, and much interesting matter relating to its history and growth. By Rev. JOSEPH H. COIT, D.D. Crown 8vo, half parchment, $1.25.

APPLETONS' GUIDE-BOOKS.

Appletons' Canadian Guide-Book. A Complete Tourist's and Sportsman's Guide to Eastern Canada and Newfoundland. With Maps, many Illustrations and an Appendix giving Fishing and Game Laws and Official Lists of Trout and Salmon Rivers and their Lessees. By CHARLES G. D. ROBERTS. 12mo, cloth, $1.25.

"The author knows Canada well, and, in spite of devotion to pure literature he has the skill of a good literary craftsman in collecting and arranging the material demanded of those who aspire to write guide-books that are capable of guiding."—*New York Times.*

"Evidently Professor Roberts is an enthusiastic sportsman of the nobler sort—a man to whom fish or game is but an excuse to go somewhere and get most of his enjoyment on the way. . . . Besides being a good compendium of fact and fancy, this guide is a capital picture-book, the illustrations being numerous, selected with an eye to the picturesque, and—wonder of wonders—there is not a hotel among them."—*New York Herald.*

Appletons' General Guide to the United States and CANADA. With numerous Maps and Illustrations. New edition, revised to date. 12mo, flexible morocco, with tuck, $2.50.

Part I separately, NEW ENGLAND AND MIDDLE STATES AND CANADA, cloth, $1.25. Part II, SOUTHERN AND WESTERN STATES, cloth, $1.25.

Appletons' Hand-Book of American Summer Resorts. With Maps, Illustrations, and Table of Railroad Fares, etc. New edition, revised to date. Large 12mo, paper, 50 cents.

An American Geological Railway Guide. Giving the Geological Formation along the Railroads, with Altitude above Tidewater, Notes on Interesting Places on the Routes, and a Description of each of the Formations. By JAMES MACFARLANE, Ph.D., and more than Seventy-five Geologists. Second edition, 1890. 426 pages. 8vo, cloth, $2.50.

For sale by all booksellers, or will be sent by mail, on receipt of price, by the Publishers.

A QUIET HOME IN BOSTON FOR A few young students, with a liberally educated lady. Private instruction if desired. Address M. S., Box 70, Studio Building, Boston.

F. S. STEBBINS, A.B., TUTOR, WILL make engagements for the summer. Address 46 No. Ave., Cambridge, Mass.

PRIVATE LESSONS IN ENGLISH and the Classics. O. C. JOLINE, A.B. (Harv.), Saratoga Springs, N. Y.

CHARLES W. STONE, Tutor for Harvard, 68 Chestnut Street, Boston.

School Agencies.

THE SCHOOL AND COLLEGE BUREAU, Elmhurst (Chicago), Ill., supplies Universities, Colleges, Academies, Church Schools, etc., with Professors, Instructors, and Teachers for every department of instruction. Records of teachers thoroughly investigated. *Mutual fitness the basis of selection.* No charge to employers. C. J. ALBERT, A.M., Manager.

AMERICAN AND FOREIGN TEACHERS' Agency supplies Professors, Teachers, Tutors, Governesses, etc., to Colleges, Schools, and Families. Apply to MRS. M. J. YOUNG-FULTON, 23 Union Square, New York.

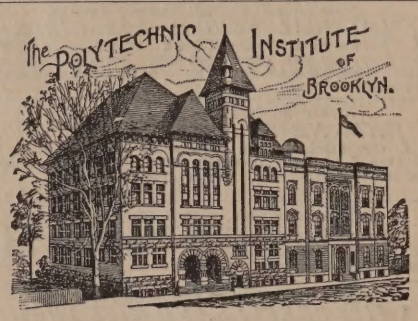
THE FISK TEACHERS' AGENCIES, 7 Tremont Place, Boston, Mass., 6 Clinton Place, N. Y., 106 Wabash Ave., Chicago, Ill., and 120½ South Spring Street, Los Angeles, Cal. 100-page Agency Manual free. EVERETT O. FISK & Co.

THE NEW AMERICAN TEACHERS' Agency supplies all grades of Teachers and Educators. Location near the centre of population of the U. S. Apply to C. B. RUGGLES, Manager, Room C, Palace Hotel Building, Cincinnati, O.

AMERICAN AND FOREIGN Professors, tutors, governesses, teachers, etc., supplied to Colleges, schools, and families. MIRIAM COYRIERE, 150 5th Av., cor. 20th St., N. Y.

SCHERMERHORN'S TEACHERS' Agency. Oldest and best known in U. S. Established 1855. 3 East 14th St., N. Y.

FRENCH TEACHERS and STUDENTS should send for free sample copy of "LE FRANCAIS" (*French Monthly*), Published by BERLITZ & Co., Madison Square, N. Y.



Polytechnic Institute of Brooklyn.

Institute Courses in Arts, Chemistry, Civil and Electrical Engineering, for the Degrees of Bachelor of Arts, Bachelor of Science, Civil Engineer, and Electrical Engineer.

Academic Department preparatory for the Institute, for other Colleges, or for Mercantile career. Gymnasium, swimming-baths, etc. Completely equipped. Fall Term begins Sept. 16, 1891. For Catalogue address DAVID H. COCHRAN, Ph.D., LL.D., President, Brooklyn, N. Y.

LAW SCHOOL.

WASHINGTON AND LEE UNIV., LEXINGTON, VA. C. A. Graves, Prof. Com. and Stat. Law; J. Randolph Tucker, Prof. Equity and Constitutional Law, etc. Opens Sept. 10. For Catalogue, address G. W. C. LEE, President.

ENGINEERING SCHOOL.

WASHINGTON AND LEE UNIVERSITY. Civil, Mechanical, Mining, Electrical. Address D. C. HUMPHREYS, Lexington, Va.

Wilson College for Young Women,

CHAMBERSBURG, PA.

$250 per year for board, room, and all college studies, except music and art. Large Music College and Art School; full Faculty; College Course B.A.; Music College B.M. Handsome park, large buildings, steam heat, gymnasium, observatory, laboratary, etc. Rev. J. EDGAR, Ph.D., President.

Vanderbilt University.

Ten Fellowships, $100 each, with free tuition, open to graduates wishing to pursue higher courses.

Address WILS WILLIAMS, Sec'y, Nashville, Tenn.

WELLS COLLEGE FOR WOMEN, AURORA, N. Y.

Three Full Courses of Study. Location beautiful and healthful. A refined Christian Home. New Building with Modern Improvements. Session begins September 16, 1891. Send for Catalogue. E. S. FRISBEE, D.D., President.

UNIVERSITY OF VIRGINIA.

Session begins Oct. 1. Extensive courses of instruction and ample equipment in *Letters* and *Science, Law, Medicine* and *Pharmacy,* and *Civil, Mining,* and *Mechanical Engineering.* Apply for Catalogue to WM. M. THORNTON, Chairman, Univ. of Va., Charlottesville, Va.

Exhaustion

HORSFORD'S ACID PHOSPHATE.

The phosphates of the system are consumed with every effort, and exhaustion usually indicates a lack of supply. The Acid Phosphate supplies the phosphates, thereby relieving exhaustion and increasing the capacity for labor. Pleasant to the taste.

Dr. A. N. KROUT, Van Wert, O., says: "Decidedly beneficial in nervous exhaustion."

Dr. S. T. NEWMAN, St. Louis, Mo., says:

"A remedy of great service in many forms of exhaustion."

Descriptive pamphlet free.

Rumford Chemical Works, Providence, R. I.

Beware of Substitutes and Imitations.

CAUTION: Be sure the word "Horsford's" is printed on the label. All others are spurious. Never sold in bulk.

VIRGINIA MILITARY INSTITUTE,

LEXINGTON, VA.

53d Year. State, Military, Scientific, and Technical School. Thorough Courses in general and applied Chemistry, and in Engineering. Confers degree of graduate in Academic Course, also degrees of Bachelor of Science and Civil Engineer in Technical Courses. All expenses, including clothing and incidentals, provided at the rate of $36.50 per month, as an *average* for the four years, *exclusive of outfit.* Gen. SCOTT SHIPP, Superintendent.

DICKINSON SEMINARY,

WILLIAMSPORT, PA.

A thoroughly equipped Classical and Scientific School for both sexes. Fifteen teachers. Regular and elective courses. Degrees conferred. Rare facilities in Music, Art, and Modern Languages. Steam heat; electric light; all modern appliances. $225.40 pays all charges in a regular course for one year. Discounts to preachers, teachers, and two from same family. Year begins September 1. Catalogue free. E. J. GRAY, D.D., President.

COLLEGE OF PHYSICIANS AND SURGEONS,

BALTIMORE, MD.

Send for a Catalogue to THOMAS OPIE, M.D., Dean, Cor. Calvert and Saratoga Streets.

THE OHIO UNIVERSITY

AT ATHENS does college work exclusively. Electives in Biology, Electricity, Elocution, Greek, Latin, etc. Special course in Pedagogy leading to degree. Tuition $30 per year. First class graduated in 1815. CHAS. W. SUPER, President.

THE CLAVERACK COLLEGE

AND HUDSON RIVER INSTITUTE

for Young Men and Women, will open its 38th year Sept. 14th. For catalogues, address REV. A. H. FLACK, A.M., Prest., Claverack, N. Y.

School of Drawing and Painting,

AND DEPARTMENT OF DECORATIVE DESIGN, MUSEUM OF FINE ARTS, BOSTON.

For circulars and detailed information apply to the manager.

Lake Erie Seminary, *Painesville, O.*—Buildings enlarged; increased opportunities for the liberal and thorough education of young women. Thirty-third year begins September 16, 1891. MISS MARY EVANS, PRINCIPAL.

RIVERVIEW ACADEMY, POUGHKEEPSIE, N. Y.

56TH YEAR. Prepares thoroughly for College, the Government, Academies, and Business. Military Organization. BISBEE & AMEN, Principals.

The Nation.

NEW YORK, THURSDAY, JULY 16, 1891.

The Week.

MR. BLAINE'S health has become a daily topic for the newsmongers, and the reports sent out from Bar Harbor are as conflicting as the first rumors from a hotly contested battle-field. On the one hand, the public is assured that there is nothing the matter with the Secretary of State, beyond the unimportant circumstance that he has become a little worn by overwork in the Department; on the other, that his condition is already desperate, and is steadily growing worse. A "staff correspondent" of the St. Louis *Republic* sends the most sensational report, declaring that Mr. Blaine is physically a mere shadow of his former self, that his mind is in a state of collapse, and that his physicians do not expect him to survive more than a few months at the longest. Sweeping contradictions of all these statements have of course followed. A controversy over the state of a man's health is a gruesome one when it has passed the stage for joking which was proper enough in Mr. Blaine's case three or four years ago, and we should not refer to these reports except for the fact that the public has a legitimate interest in knowing the real condition of the Secretary of State. The exact truth about the matter, as we learn it from authorities in Bar Harbor whose opportunities for knowing the situation could not be excelled, is that Mr. Blaine is very feeble, that his illness is most serious, and that he can never again be active in affairs unless there should be a great and radical change in his condition, such as there is no reason to expect.

The Republicans of Ohio, in their recent State Convention, adopted the following resolution on the silver question:

> "We approve the Coinage Act by which the great product of the silver mines is added to the currency of the people, and out of which experiment may come a wise adjustment of financial questions liberal towards Western interests."

This is construed as a declaration against the free coinage of silver. The only agitation in Ohio on that question is promoted by the National Silver League. There is no evidence that any considerable number of persons in either party have any particular bias as to silver one way or the other. Probably all who take the trouble to think about it would say that they are in favor of both silver and gold, but would be more in favor of gold than of silver if they were convinced that they could have only one. The number of persons in the whole country who desire to send all our gold abroad, or convert it into merchandise and establish the single silver standard, is so small that the few who would really prefer it make a pretence of not desiring it. But the truth undoubtedly is that few persons think about the matter at all. The subject is a difficult one to master, and consequently a few windy and plausible talkers are able to make it appear that the people are taking a great interest in it, whereas the great majority do not understand it, and take no interest in it whatever.

Some complaints have recently been heard from exporters of canned goods over a ruling of the Treasury Department requiring the actual inspection of all articles of export upon which a drawback is claimed. As it appears to be a physical impossibility to make this inspection with the force at the disposal of the Government, the exporters have been compelled to let some of their goods go without obtaining any drawback upon the tin cases in which they are packed. But although this may seem a hardship to them, if they regard it from a purely selfish point of view, it is obvious that it may be a matter of vital importance to that tender infant, the tin industry. In fact, we are very much inclined to believe that it will be necessary to abolish the drawback upon the manufactures of tin altogether before the industry can be fairly established. For if we look at the matter closely, it appears that, under the existing law, the whole of the enormous product of our oil refineries and canneries that now goes abroad may be exported in tin cans of foreign manufacture. These industries are therefore practically allowed to import all the tin that they require free of duty, since whatever duty they pay upon the import of tin is refunded upon its export. But what is this but a discrimination against the struggling American tin-manufacturer? How can the Welsh manufacture be stamped out so long as this steady market is assured? It would be almost as wise to pay the Welshmen a bounty upon their production as to allow them these outrageously favorable terms. So long as they can continue to send their goods to this country free of duty, so long will they continue their wicked rivalry with American tin plate. Upon the goods which they furnish to our exporters they will probably make such profits as to enable them to sell the rest of their product below cost, thereby ruining all the fond hopes that have been entertained of the American industry. It would probably be speaking within bounds to say that, if this policy lasts, many American tin mines will remain undiscovered, that dozens of tin factories which have been the theme of poetry and romance will never "materialize," and that two or three old men and several boys will be thrown out of employment.

The net purport and effect of the McKinley tariff on tin plate has been to transfer from the pockets of the American people to those of the importers of that article a very large sum of money. The smart fellows, like Niedringhaus of St. Louis, who pretend to make tin plate and who distribute Welsh plate in the form of tin cups, pans, and whistles as the genuine American article, "loaded up" with the imported article before the new tariff took effect. They are now charging for the stock on hand about what it costs to import it with the duty added. There is a slight difference, due to the competition of sellers who are loaded up as aforesaid, but the market is quoted by C. S. Trench & Co., in their trade circular of July 11, as "firm with upward tendency." The same circular tells us that the excess of importation this year over the two preceding years has been equal to about three-months' supply; but as this excess includes everything that the Welsh manufacturers had on hand, the very sweepings of their warehouses, there are certain kinds and grades of which we have not a three-months' supply. What then? We shall very soon resume our importations, and, when we do resume, the consumers will be compelled to pay in duties very nearly as much as the tin plate costs free on board at Swansea.

There is a certain elasticity about the logic of protectionism that leads to results such as would be obtained in a system of mathematics where twice two sometimes made three and sometimes five. If a mathematician of this school produced calculations that were unfavorably criticised, he would always be able to say that his critic only made out a case by giving the wrong value to the factor two in a particular part of the calculation. These observations are in part suggested by a paragraph in the *Tribune* giving the decennial rate of increase of population shown by the last English census, which is only 11.64 per cent., the smallest on record, while that of 1811 was 18.06 per cent., and that of 1821 was 15.80 per cent. Upon this it is remarked, "Inasmuch as the rate of increase of the population affords the surest gauge of the prosperity and material progress of a nation, it will be seen that England's economic condition was infinitely superior in the times when her industries enjoyed the fostering care of the protective tariff to what it is nowadays under the blighting and disastrous reign of so-called free trade." Now this cannot be meant as a joke, because it would not be safe to allow jesting upon the sacred subject of the tariff in the columns of the *Tribune*. Some of its elderly readers would be sure to take it seriously and to ask for explanations which it would be dangerous and unpleasant to make before a critical public. But if it be taken seriously, what are we to think of the bearing of the principle laid down upon the effect of protection in this country during the last decade? Has this effect really been blighting and disastrous, as the principle requires? Is the trouble with the Republican tariff or the Republican census? We do not ask for information for our own use, having clear views upon the subject, but there must be many readers of the *Tribune* capable of reasoning that if two and two make four, twice four ought to make

eight, and they are certainly entitled to an explanation of the relation of the lessened rate of increase of population in this country for a period during which our industries have been enjoying the fostering care of the protective tariff.

The public have very good reasons for distrusting the accuracy of Mr. Porter's census, but it is not often that this distrust is so entirely justified as it is by his defence of Bulletin No. 82. This bulletin made the ordinary expenses of New York city appear to be about $17,000,000 more than they are admitted to be by Comptroller Myers. In the case of the cities of Boston and New York, Mr. Porter included the county expenditures with those of the city, while in the remainder of the 100 cities taken for comparison he seems not to have included the county expenses. This proceeding is obviously misleading, and it is not easy to understand why it was resorted to. But the manner in which he verifies his inquiries is the remarkable feature of his method. He compiled a statement of the expenditure of the city of New York, and sent it to the Comptroller with the request that he would look it over and correct it. Not hearing from the Comptroller, he seems to have thought that the statement must be published without any further attempt at verification. He now calmly assures the public that if the statement is incorrect it is not the fault of the Superintendent of the Census, but of the Comptroller of the city of New York! The secretary of the Comptroller, however, declares that the statement was never received by him, and the question now arises, To whom will Mr. Porter charge the error of the statement? Probably he will blame the Post-office, and consider that he thus frees himself from all responsibility. But it is not encouraging to be given to understand that we are to receive the census returns subject to the proviso that they may contain errors which the Census Bureau trusted to outsiders to correct, and that the silence of these outsiders, whether due to the failure of the mail or whatever cause, is to be construed as an approval. The assistance of outsiders is of importance, but when it is not rendered the Census Bureau ought to take some pains to supply its place by verifications of its own.

Prof. Richmond Smith grapples, in the columns of the *Congregationalist*, with the problem of restricting immigration, taking the position that the difficulty arises from regarding the matter as national rather than international. He has no doubt that it will soon be regulated by international agreement, which will provide that each nation shall take care of its own unfortunates at home, and not connive at or assist their emigration as at present. But Professor Smith goes on to argue that if we demand of European nations that certain classes of persons shall not be sent to us, they have a right to demand that we shall not receive such classes of persons as they do not desire to have emigrate. He believes that the sentiment prevalent in this country concerning compulsory military service is false, and that we do wrong to "look with lenient eyes upon the youths who emigrate to avoid it." This he declares to be unpatriotic conduct upon the part of these youths, which we should not encourage. As to the objection that our enforcing the conscription in European countries would destroy the last refuge from political tyranny and oppression, he says it is old-fashioned. In the last century, it is true, liberty was unknown, and revolution was necessary to gain freedom of thought and speech. But all this is changed, and revolution is no longer necessary, and we should refuse to receive any European who cannot bring with him the certificate of the authorities of his native land that they consent to his departure. We do not consider this solution as very practical, since any party in this country that proposed to assist European Powers in enforcing their compulsory military service would be buried under an avalanche of popular indignation; but aside from this objection, we have only to consider the case of the Russian Jews in order to appreciate the despotic theory of government that underlies Professor Smith's proposal. There will always be many human beings who do not consider that "all modern civilized governments allow such participation in public affairs that revolution is no longer necessary for the vindication of human rights"; and it is to be hoped that despotism will never so far prevail as to be able to prevent men who feel they are oppressed by their own government from taking refuge in lands that offer them greater liberty.

The Committee in charge of the Baron Hirsch fund in this city aim to colonize as many of the Russian refugees as possible, and in order to make colonization more feasible, it has seemed best to connect an industrial feature with the agricultural enterprise. All the conditions favor the success of the experiment. The settlers, many of whom were agriculturists at home, and all of whom are animated with an ardent desire to make agriculture their permanent occupation in this country, must be possessed of at least $200 per family. The Committee, on their part, offer them good land on liberal terms and the means of cultivating it, and those skilled in manual labor, as many of them are, will be assisted in procuring remunerative work. The provision by which one-half of the land purchased is set aside for future sale to newcomers of whatever race or religion, is intended to prevent an undesirable isolation of the colonists, and will commend itself to all who are anxious for the rapid assimilation of every class of immigrants. That the colonization of Russian Hebrews can be successfully accomplished is proved by the example of the settlements established near Vineland, N. J., where about 700 families, all of them self-supporting, are devoted to fruit-raising and vegetable-growing. The success of this colony and of other settlements in the far West vindicates the wisdom of the policy of Jewish colonization inaugurated in this country, with such self-sacrificing zeal, by the late lamented Michael Heilprin.

Gen. S. C. Armstrong of the Hampton (Va.) Institute has been making a trip over the Southern Pacific route to San Francisco, on his way, for a summer vacation, to the Sandwich Islands, where he was born, the son of a missionary. He kept his eyes open for everything bearing upon the condition of the negroes as he travelled through the South, and saw and heard sundry things to confirm his view that the race is, on the whole, making as rapid progress as could be expected. At New Orleans he met Mr. Hutchinson, who is President of the Morgan line of steamers and manager of the Southern Pacific Railroad, a Southerner born and bred, who "has a clear-headed, fair view of the black man, infinitely more hopeful and helpful for him than any politician's solicitude." Mr. Hutchinson told him that negroes are employed on a perfect equality with whites in the machine-shops of the railroad at Houston, Texas, all hands being paid according to their ability, without the slightest reference to any consideration of race. This testimony brings out a striking contrast between North and South, upon which Gen. Armstrong thus comments: "The trades unions and prejudice at the North forbid this. When people begin to see more clear and straight into the negro question, they will realize that the industrial freedom which he enjoys at the South is far greater than that at the North. No black young man in the South is more badly off than the trained American mechanic, fresh from Col. Auchmuty's or other industrial school, in New York and elsewhere, who, on graduating, has no chance for work alongside of the emigrant mechanic who has landed that day at Castle Garden. The white man is at the mercy of the trades unions: the black man in the South is not, to the point of exclusion; only the lazy are hopeless."

A perceptible change in the attitude of Southern whites towards the education of the blacks is illustrated by a despatch from Port Gibson, Miss., to the New Orleans *Times-Democrat*. It appears that some benevolent women of the Presbyterian Church in the North have decided to establish an industrial institute for colored girls in Mississippi, but have not settled upon the location. The fact becoming known, the citizens of Port Gibson held a public meeting at the Court-house the other day, and adopted resolutions that, "Whereas we are desirous of expressing our interest and sympathy for all educational movements having in view the intellectual and moral improvement of our colored citizens, we invite the projectors of the movement to visit Port Gibson and confer with our people, with a

view to having such institute located in the vicinity of Port Gibson; and that we hereby promise our moral and active support to such institute, if planted in this vicinity." It is not many years since the people of any Mississippi town would have contemplated with aversion the starting of a school for "nigger girls" in their place; and the fact that in Port Gibson they not only invite the establishment of such an institution, but also promise their "moral and active support," is full of significance.

The controversy over the Railroad Commissionership in Massachusetts between the Democratic Governor and the Republican Council revives the periodical discussion as to whether the Council is an institution worth preserving. It used to be a common thing to divide the executive authority between the Governor and some body of this sort, but there are now only two States besides Massachusetts which hold to the old rule. There has been of late years a steady growth of opinion in the direction of centring power in one executive head, upon the theory that a single man can be better held responsible, and that when thus held solely responsible he will render better service. This has been the fundamental principle upon which almost all recent changes in municipal charters have been based, and it applies, of course, quite as well to State constitutions. When the people of Massachusetts elected William E. Russell Governor, they meant to intrust him with the executive authority, and it is an anomaly that he should not be able to exercise that authority unless a body of councillors belonging to the other party approve his ideas.

A very important matter was brought forward at the University Convocation on Thursday by Mr. Andrew D. White in his discussion of the topic, "Coördination of University, College, and Academy." He contrasted the lavish generosity of our people to the universities and colleges, and the large sums expended on our common schools, with the slender revenues of our high schools and academies. The intermediate schools, he declared, are utterly unable with their present resources to secure the educators that they need. But the importance of their work is undeniable, and unless they are properly equipped for it, the material which they pass on to the university will not be in such a state of preparation as to be most advantageously handled there. Mr. White went so far as to propose that the training given to the two lower classes in the universities should be turned over to the intermediate schools—a proposition suggesting that recently made for shortening the course at Harvard by a year. Whether this policy is wise or not is a question; but there is no doubt that our training-schools have been comparatively neglected in the distribution of the great gifts to the cause of education. Phillips Academy at Andover has recently made an appeal for subvention which shows an almost startling difference between the size of its endowment and that of any college or university having an equal number of pupils. No one will deny that the instructor in the preparatory school has harder work and less pay than the college professor. Few, we think, will not admit that this work is as important, and requires as high qualifications, as any that is to be done in the whole range of education.

The overwhelming defeat of the Parnellite candidate at Carlow probably puts an end to the political career of Parnell himself. But its effect does not end there. It will convince the people of England that the home-rule cause is not dependent upon the fate or fortunes of any particular man, but is a permanent, self-perpetuating force in the sister island. More than this, it will prove that moral influences are stronger in Ireland than personal attachments—a point of supreme importance in the coming general elections. When the Parnell scandal was first disclosed in court, his adherents said that the case was not an unusual one, and that many of his accusers were as bad as himself. They refused to take the view that Parnell had incapacitated himself to be an effective ally of the English Liberals, whose Nonconformist membership would have nothing to do with a proved adulterer. But the priesthood of Ireland rendered most important service at this juncture by opening the eyes of the people to both the moral and the political consequences of sustaining Parnell. To their influence more than to any other cause is due the collapse of Parnellism, of which the Carlow election is the indisputable sign. The reaction upon English public opinion must be very great and wholly in favor of the Liberal party.

The returns of the census for Scotland show that the tendency of population to concentrate is as manifest there as in this country. The Registrar-General divides the communities into five classes — principal town districts, large town districts, small town districts, mainland and rural districts, and insular rural districts. The first class shows a growth of over 12 per cent., the second a growth of over 20 per cent., the third of over 6 per cent. In the fourth, population has remained nearly stationary, but in the islands a decrease has taken place, which, in view of their serious over-population, is a gratifying showing. Some of these islands are in fact not fit for human habitation except during a part of the year. The most rapid increase in population has taken place in Glasgow, but Edinburgh, Dundee, Aberdeen, Leith, and Paisley all show increases of from 10 to 20 per cent. In 1841 Scotland had 2,600,000 inhabitants, and Ireland had 8,196,000. In 1891 Scotland has 4,033,000 and Ireland about 4,700,000; so that if existing tendencies continue, the population of Scotland will be the greater in 1901.

The prorogation of the Spanish Cortes till November leaves public business in a highly unfinished condition. Cánovas's labor bills, upon which he counts so much to secure popularity for his Administration, had clear sailing in the Senate, but were not even taken up in the lower house. The Government's financial measure, involving a loan from the Bank of Spain and the extension of the monopoly of that institution, had passed the Chamber by a large majority, and was under discussion in the Senate, at last mail advices; the telegraph does not say whether it has been agreed to, though it is altogether probable that it has, since the Treasury is badly off for money and would not allow the authorization of the needed loan to be deferred. Cuban affairs are left in a sad tangle. The new budget for the colonies was not voted, and that means the extension of the old budget for another year. The new budget was open to very serious objection on the ground that it made no adequate allowance for the effect of the treaty of reciprocity upon Cuba's revenue from customs; the only attempt in that direction was the proposed tax on real estate devoted to sugar-growing. Even that clause fails now, and the treaty will go into effect utterly disregarded in the estimate of income and expenses. If Spanish financiering were not of so happy-go-lucky a kind, this fact might be taken as an indication that the treaty is by no means so important a measure as has been indicated. But its details are soon to be made public, and then we shall know how badly the financial affairs of Cuba have been bungled.

A curious document was published in Brazil early in June over the signature of the ex-Emperor. It was signed at Cannes, April 23, and reached the public through a partisan of the empire, Viscount Taunay. Entitled an "Account of Office" (*Fe de officio*), it sets forth the ideas and aims which Dom Pedro says he cherished throughout the fifty years of his government of "his dear Brazil." Some things he is able to mention as actually accomplished, but more are spoken of as ends he strove for and hoped to reach, all in good time. He desired, he says, a free Church in a free State, but only when the education of the people would enable them to profit by those institutions. The address also has parts which look like a programme, though, on the whole, it has more the appearance of a political testament. It certainly has a characteristic conclusion: "In scientific investigations and in constant study I have found consolation, and kept myself from moral tempests." In some quarters the address was regarded as a political manifesto, or at least a feeler, intended to sound popular opinion on the question of a possible restoration of the Empire. But most people thought it simply the harmless attempt of an honest old gentleman to justify his conduct as Emperor. It has not caused a ripple of excitement; nor, on the other hand, does it appear to have lessened the kindly personal regard which has always existed among the people for Dom Pedro.

THE DRAIN OF GOLD.

THE continuance of the export of gold after sterling exchange had fallen below the exporting point has caused much anxiety and perplexity in the financial world. Not far from $70,000,000 have been exported within three months, and, in spite of the fact that the rate of exchange is now such as to make the operation apparently a losing one, the export has gone on and may be renewed at any moment. As men are not in the habit of deliberately going on with losing operations, it is obvious that, in some way not visible to the public, an advantage is expected to arise from these operations. Just how this profit is to arise, we may not be able to determine until the persons engaged in the transaction choose to take us into their confidence; but it may be possible to get some light upon the situation from a review of some of its conditions. Upon a subject on which so many intelligent men are in doubt, we do not wish to dogmatize. Our remarks are to be taken as tentative, and as representing a state of affairs, so far as the drain of gold is concerned, that is conceivable, although it may not be actual.

Let us in the first place ask ourselves how much gold we have. A year ago the Director of the Mint estimated it at about $700,000,000. He was able to point to some $65,000,000 in gold bullion and some $255,000,000 in coin held by the Treasury, to some $78,000,000 in the national banks, and to some $34,000,000 in other repositories. The remainder of the estimated amount held, some $260,000,000, was declared to be, in accordance with a venerated tradition, in the hands of the people. There are many reasons for supposing the existence of this last fund to be mythical. We are not talking of gold that exists in the shape of breast-pins and finger-rings, in teeth-fillings, and mirror frames and gildings, but of gold available for financial purposes.

Is this money to be found in the pockets of the people? No; for it is common experience that there is very little gold coin in circulation. When people get it, they generally pay it in to the banks, and there it stays. If the people do not carry it in their pockets, or pay it into the banks with their deposits, they must hide it somewhere. Do they put it in their safe deposit vaults? No; for those who have occasion to visit these vaults see no one handling bags of coin. They see men storing away stocks and bonds to large amounts, and such bulky articles as bullion could not be laid away to any great extent without exciting notice or comment. Do the people, then, hide their gold in old stockings, or under their cellar floors, or in their back gardens? It is conceivable that such practices exist, but there is not the slightest evidence that they prevail to any extent. Where, then, is this great fund of $250,000,000 or $260,000,000 of gold to be found? We apprehend that it exists only in the monetary tables of the Government and in the imagination of financiers.

If this view is correct, what is our present situation? The Treasury had on the first of the month about $177,000,000 of gold coin, and $62,000,000 bullion, say $240,000,000. Of this, $100,000,000 is a gold reserve, supposed to be specially pledged to the redemption of Government notes. This would leave say $140,000,000 available gold, against which there are outstanding certificates to the amount of about $120,000,000. If these certificates were drawn, there would remain about $20,000,000 in the Treasury on which to maintain gold payments, or, if the reserve be available, $120,000,000. To this should be added the amount in the hands of the banks, which is not definitely known, but was computed to be, a year ago, about $112,000,000. Upon the whole, it is probably not safe to estimate our stock of gold, including the $100,000,000 reserve, at much more than $350,000,000, or about one-half of the amount commonly assumed. A further loss of $70,000,000 might bring us within sight of the stoppage of gold payments.

Let us now proceed to consider the course that would naturally be adopted by a man who thought that all the circumstances indicated a change from gold to silver payments in this country. Every one knows the mainspring of the silver movement. Many honest and simple-hearted people are wild for silver, but the momentum of the demand comes from the feeling that it will enable people who are in debt to pay their creditors in something that costs less than gold. That is why we must have free coinage of silver. The present law confines the profit of the operation to the Government. But if the coinage of silver were free, the prices of all commodities, being then measured in silver, would rise, and every producer would obtain the wherewithal to pay his debts at less sacrifice than at present. Now it is not to be supposed that the creditor will supinely view this proceeding. Not only creditors but a great many shrewd persons will ask themselves, whenever an alteration of values is to be expected, "How can we make any money out of it, or how may we manage at least not to lose any money out of it?" Two ways are conspicuously open. The creditor may dispose of the obligation of his debtor at its present gold value, leaving the new owner to take his chances, or he may, if the terms of the debt allow it, insist upon present payment before the depreciated standard comes into effect. This is the first way. The second is to become a debtor, borrowing money at present convertible into gold, or buying commodities on credit at their gold price, with the expectation of paying the debt in silver. In the former way the creditor would escape loss and would have his gold ready for any use that presented itself. This would be his own gold absolutely. In the latter way the speculator would get gold or its equivalent that would be legally his own, but subject to a claim for its amount which he would expect to satisfy in silver. The former way amounts to a purchase of gold. The latter way amounts to a sale of silver. In the former way an investment is made that is secure against loss and depreciation. In the latter way one may also make an investment in gold upon credit, that may not only be secure against loss, but involve a profit.

It will perhaps enable us to see a little more clearly into this intricate matter if we pause to note that there is strictly nothing international about it. The United States, as a corporation, owes nothing to the Republic of France, or the Empire of Germany, or the United Kingdom. The debts with which we are concerned are the obligations of private persons, including corporations, to private persons. This observation is of importance because we are apt to speak as if, in view of free-silver coinage, foreigners would send over their American securities for sale here. But if these securities are not due, there is no compulsion upon Americans to buy them, any more than there is upon Londoners, and there is no particular reason, under the circumstances, why they should sell better here than in London. They cannot be sold except for a price satisfactory to the buyer, and the considerations that affect him are not those of his citizenship or residence. Hence it appears that such a realization as we have described for the purpose of getting gold need not involve any transfer of securities from the other side of the water, and herein lies the answer to those who say that gold is not being accumulated in this way because the street is not full of securities bearing a London ear-mark. In short, there is just as much inducement for timid and for cautious New Yorkers to sell American securities for gold as there is for timid or cautious Londoners.

But it is the peculiarity of the situation that there is no inducement to retain gold in this country when it is realized. The prime uncertainty, that which starts the whole movement, is the doubt in the minds of men of wealth, whether, if they lend gold now, or, what is the same thing, hold securities that are now payable in gold, they may not hereafter be obliged to take their pay in silver. No one will deny that there is a possibility of this result taking place in this country, or that there is, humanly speaking, no possibility of the kind in England. In short, if any one has a fund of gold, he will be likely to do better with it abroad than at home. If we are going to have free silver, gold in its present amount would be a drug in the market here; and on the other hand it is in rather unusual demand abroad. The Russian Government seems to have been accumulating gold. The Bank of France is allowing interest on gold deposits. And Mr. Goschen's significant speech, reflecting upon the slenderness of the reserves of the English banks, is not improbably bearing fruit.

The movement that we have described is, as we have said, not so much a movement for profit as for security. There is, however, nothing incompatible in this with a movement which some good observers profess to see arising out of speculation in wheat futures. That is an illustration of the second way above referred to, in which human nature may be expected to act in view of an anticipated disturbance in value. If the skies look stormy, some anglers will secure their game and get on shore; but some prefer to fish in troubled waters.

WANAMAKER'S LATEST VERSION.

Mr. John Wanamaker took the witness-stand in the Keystone Bank inquiry on Friday for the second time. He had been summoned ostensibly to explain the discrepancies between his first evidence and subsequent testimony, but it was soon clear that he was present in order that he might make an immediate defence against some entirely fresh charges which were to be produced. The new charges were in the suppressed Bardsley statement which the editor of the *Public Ledger* had "for grave public reasons" declined to publish in his newspaper. This proved to be a report of two conversations which had been held with Bardsley by members of the staff of the *Public Ledger*. We will consider the revelations of this document and Mr. Wanamaker's reply to them first, and his explanations of his former evidence afterwards.

Bardsley makes, in his conversations, three direct charges against Mr. Wanamaker. We give them in their order in his own language:

"Marsh told me that John Wanamaker knowingly held over 2,500 shares of our over-issue [fraudulent Keystone stock] and had demanded $100,000 for them, although he had never paid or given any value for them whatever. Wanamaker's demand was that Mrs. Lucas was to give $50,000 of that amount, Marsh $25,000, and the bank the remaining $25,000."

"A plan was arranged that the stock was to be thrown into a pool or given up, in order to help the rebuilding of the bank. Everything seemed clear for a speedy and satisfactory arrangement when John Wanamaker upset all our plans by his remarkable demand, accompanied by the threat that unless the $100,000 was paid over to his lawyer, P. F. Rothermel, he would close the bank. Marsh was frightened and did not know what to do. I told him to engage good lawyers at once and to instruct them to demand the over-issue from John Wanamaker, and not pay him a cent. I showed him that John Wanamaker was knowingly guilty of a crime in retaining those over-issued shares, and that he must not be permitted to bulldoze the bank. Marsh took my advice and engaged Mayer Sulzberger and John G. Johnson. They demanded the stock, and Wanamaker reduced his demand to $25,000, but he and his lawyer were told that if the stock were not returned by a certain specified date legal action would be taken against him. Before that date John Wanamaker weakened and returned every share of the over-issue."

"Let me explain to you what sort of a borrower John Wanamaker was, and how he borrowed. Here's an instance: In March, 1890, Marsh came to me in a great fidget and said that John Wanamaker wanted $200,000 from the bank, and must have it right away. Marsh added that he told Wanamaker that the bank had not that large amount of money to spare—hadn't it on hand, in fact—and Wanamaker said to him that 'he knew where to get it.' Marsh said to me that Wanamaker was a good customer of the bank anyhow, and he wanted to oblige him. I told him that I could not do anything for him. Two days afterwards he returned and said that John Wanamaker was persistent and must have the money, that he knew the bank did not have it, but if I would lend it the bank would not ask the interest, but would pay over to me direct whatever Wanamaker would agree to give. I let him have the money and John Wanamaker got it. The books of the bank ought to give a good idea of his transactions."

It is not strange that the friends of Mr. Wanamaker were unwilling to have these charges published. They connect Wanamaker for the first time with the missing $2,000,000 of city and State money which disappeared through the Keystone Bank into which Bardsley put it, and connect him also more closely than ever with Marsh and Bardsley. The first and second confirm the former evidence of Wanamaker and other witnesses that he was seeking to obtain money from Mrs. Lucas and Marsh for the fraudulent stock which he says he received from Lucas only as collateral. The third makes a direct charge, for the first time in the inquiry, that Wanamaker demanded and received $200,000 of the city money from Bardsley through Marsh as a loan. There have been rumors of such a loan having been made from the outset, and Mr. Wanamaker denied them emphatically on his first cross-examination. Now they assume definite form as having been common knowledge between Bardsley and Marsh, and again Mr. Wanamaker denies them emphatically, saying: "I pronounce that absolutely and unqualifiedly false from beginning to end, without any foundation of fact of any sort whatever."

In reference to the other two charges, Mr. Wanamaker admits that he did try to obtain money from Mrs. Lucas for the fraudulent stock, but says he considered the stock genuine, and has no proof to-day that it was not. He is less explicit in his testimony in regard to his demands on Marsh for money for this stock, but admits that when Marsh and the Vice-President of the bank called on him in Washington about it, "I felt obliged to say, that they must either settle with me or I could not, in justice to myself, allow the Comptroller of the Currency to be ignorant of the fact that they were claiming that some of the stock I held was improper stock." This is frank confession that he was trying to extort money from them for that stock, after he had been told that it was fraudulent, on threat of revealing the condition of the bank to the Comptroller and having it closed. The Comptroller's recollection is, that Marsh told him that Wanamaker's demand was for $50,000.

The sum and substance, therefore, of the new charges against Wanamaker, through Bardsley's conversations, are, that he borrowed $200,000 of the public money from Bardsley through Marsh, and that he tried to extort $50,000 from Marsh as the price of stock which he had been told was fraudulent, on threat of having the bank closed. He meets the first charge with a sweeping denial, and he virtually confesses the truth of the second.

In regard to his former testimony, Mr. Wanamaker makes very elaborate explanation. He says, of the 2,625 shares of genuine stock which he neglected to mention at all in his first statement, and which appear on the books of the bank as having been issued either to himself or to his secretary or office-boy, that he took them at Mr. Lucas's request to raise a loan of $40,000 to oblige Lucas, and that they never were his and he never had a penny's interest in them before or after. In regard to the fact that the books of the bank show that the greater part of the 2,516 shares of fraudulent stock were issued after Lucas's death, instead of long before, as he declared in his first statement, Mr. Wanamaker explains that all the certificates were issued in Lucas's lifetime, but were not all placed with his brokers till afterwards, and that the dates are not the dates of issue, but of the transfer. He passes by in silence the fact that these shares were issued in the name of his employees.

There are several points which are far from clear here, but it is as clear now as ever it was that Wanamaker, from the time that he received this fraudulent stock till the moment when Marsh made it valueless by confessing the truth about it and the bank to the Comptroller of the Currency, was using it as collateral and was demanding cash, ranging from $100,000 down to $50,000 for it, from Marsh and Mrs. Lucas as the price of its surrender. He persists in saying he does not yet believe it to have been fraudulent, yet he admits that he threatened to tell the Comptroller it was fraudulent if Marsh did not give him money for it. On minor points he is diffuse, and voluble, and pious, but on these he stands convicted out of his own mouth. Yet the Philadelphia *Public Ledger* says of his second statement, much as it said of his first: "Mr. Wanamaker's testimony was again a clear, comprehensive, and conclusive refutation of all the intimations and innuendos that have been made against him concerning the bad business of the Keystone Bank"; and the rest of the Wanamakered press of the city takes similar views.

REPUBLICAN MORALITY IN CONNECTICUT.

A bitter "journalistic row" between the proprietors of two Republican newspapers in Connecticut has resulted in the revelation of some very ugly party secrets. A short time ago the proprietor of the Hartford *Evening Post*, Mr. John A. Porter, who is also a member of the Legislature and a close personal friend of Gov. Bulkeley, published in his newspaper an article entitled "The Whole Story," in which severe reflections were cast upon the conduct of the proprietor of the New Haven *Palladium*, ex-Judge Lynde Harrison, who was Chairman of the Republican State Committee in 1884, and who has been for many years one of the ablest leaders of the Republican party in Connecticut. Both in and out of his newspaper, Judge Harrison has been outspoken in condemnation of the course of the Republican majority in the Legislature in refusing to allow the Democratic candidates for Lieutenant-Governor, Secretary, and Comptroller, who were elected in November last, to enter into office. He held that while the Democratic candidate for Governor had not received a sufficient number of votes to elect him, these candidates had, and that, in refusing to unite with the Democratic Senate in formally qualifying them for office, the Republicans of the House were pursuing an unjustifiable course. The Hartford *Evening Post* presumed to rebuke the Judge for his utterances on this point, and has finally goaded him into the publication of an open letter, which was printed on Friday morning.

Judge Harrison's letter is one of the clearest exposures of a clumsy piece of political

rascality ever made. It should be borne in mind that he is speaking as the recognized leader of his party, and that his long and devoted record of party service has never borne the faintest taint of Mugwumpism. His deliverances are official and are likely to be final, and they can be summed up in a very few words. He says there appeared in Republican circles, soon after the election in November, rumors that the Republicans of the House would attempt to force the Democrats of the Senate to concur in the election of the Republican candidate for Governor, by refusing to allow the Democratic candidates who had been elected to the offices of Lieutenant-Governor, Secretary, and Comptroller to be qualified. As soon as he heard of this plan, he denounced it in and out of his paper as unfair and impolitic, and it was so regarded by other leaders of the party. When the Legislature met, a select committee of the House was appointed to investigate the returns for State officers, and Mr. Porter was made its Chairman. After it had completed its work, Judge Harrison says that Mr. Porter went to him and told him that certain gentlemen wished him to make a report declaring that the Democratic candidates for Lieutenant-Governor, Secretary, and Comptroller had not been elected, but that he could not do so because he believed the contrary. Judge Harrison attended two meetings of the Committee, at which a few other Republican leaders were also present, and at each of these Mr. Porter favored a report declaring the three Democratic candidates elected. Such a report was drawn up at the second meeting on January 27, and Mr. Porter took it away with him to have it copied by a typewriter.

Between the afternoon of January 27 and the morning of January 28, an astonishing transformation was effected in this report. It was presented to the House on the latter date, and proved to be a declaration that the Committee had found that there had been no election for Lieutenant-Governor and Secretary, and that, in regard to the Comptrollership, the Democratic candidate had been elected, but should not be allowed to take office till the Senate would consent to join the House in an investigation of the election. Judge Harrison says that this report astonished him, and he characterizes it in the following vigorous language:

"I did not hesitate, after January 28, to tell you, as well as others, that I looked upon the report as dishonorable; that I had been cheated by you, and had been betrayed into taking part twice in a council with you on the subject when you very well knew, by what took place on January 7, that I would have nothing to do with the controversy in any manner, nor take part in any council on the subject, if it was intended to take the unfair, unwise, and impolitic course which was suggested.

"The report that was finally made went further than was suggested in November and December. You knew, as did many others, that the Republican party would not sustain you for any length of time in keeping out of office men who were elected, merely because the Democrats refused to do what the Republicans believed to be right in the matter of the Governorship. You are believed to be responsible for changing that report between the 27th and 28th of January. In making that change you did not dare to follow the lines of boldness suggested in November, but you imposed upon the honest members of the House by making a report which, in the light of all the events since that time, is clearly and unequivocally false."

The Judge charges Mr. Porter with the entire responsibility of this "unequivocally false" report, says that by some means or other he induced all his fellow-members on the Committee to sign it, and declares that the Republican members of the House accepted it because they had confidence in the Committee. These members, he declares, acted in good faith and in ignorance of the facts. "You," he remarks to Mr. Porter, "knew better. It is said there is forgiveness for those who sin ignorantly, but for those who sin against light there may be no forgiveness in this world or the next." Judge Harrison might have added that while in the moral world there is indeed no forgiveness for those who sin against light, in the Republican party there is seldom forgiveness for those who sin and get found out. This is the aspect of his case which will most depress Mr. Porter.

As for the effect of the disclosure upon the politics of the State, Judge Harrison freely predicts disaster. He himself gives the Opposition a fine campaign document in this letter, and especially in the following passage: "I am a Republican, and I believe in fighting political campaigns fairly, squarely, and for all they are worth. Politics is sometimes said to be a game; but it should be played by gentlemen in an honorable way. When beaten in the game, pay up, and don't try to steal the stakes." As a parting shot to Mr. Porter, he addresses him this solemn admonition, which, coming as it does from a loyal Republican, should be pondered deeply by all the Republicans of the State:

"Finally, Mr. Porter, you ought to understand that thousands of Republicans in this State consider that the honor of their party is at stake in this matter. The national platform of 1888 reaffirms the devotion of the party to the principle that every lawful ballot shall be duly counted. In the Republican State platform of September, 1890, it is demanded that throughout the length and breadth of the land a free ballot and a fair count be assured. The position I have maintained, and still hold, in relation to Gen. Merwin is in affirmance of these great principles. The position you and the *Evening Post* take in relation to the minor officials is that a fair and honest count may be reversed by tricks in the secret conclaves of the final canvassing board, and such a position is one which the Republican party of Lincoln, Grant, Garfield, Harrison, and Blaine will repudiate whenever it has an opportunity."

No Republican newspaper in the country has been more fervid in its demands for a pure ballot in the South than the Hartford *Post*, whose proprietor is now disclosed as the perpetrator of a piece of political rascality worthy of a Returning Board of Southern carpet-baggers. That such a thing should have been done successfully in a New England State shows more clearly than anything else that has happened lately how completely the Republican party has passed into the hands of its Quays, Dudleys, Wanamakers, and Porters.

COUNTRY READING AND VOTING.

THE editor of one of the oldest "country weeklies" in New England, the Litchfield *Enquirer*, on retiring from journalism after a quarter of a century of editorial work upon that paper, calls attention to the local changes in the conditions of rural journalism during the long period. In the county named, where twenty-five years ago there were but two weekly newspapers—not long before that only one—there are now nine. This change has taken place, too, in a county distinctively rural, filled with waning farm towns, and whose population, outside of a few factory townships, has shown a decided decrease. The increase of newspapers has not been due to any stronger natal appetite for newspaper reading, but simply to the cheapening, in the retiring editor's opinion, of the relative or absolute cost of the things by which country newspapers are produced, and especially by the introduction of the "plate matter" as a substitute for actual type-setting, at a saving of 75 per cent. What is true of Litchfield County is, we doubt not, true in a marked degree of the country at large; and when the new census gives us the statistics for a decade during which the use of "plate matter," ready-made cuts, "syndicate letters," "patent outsides," and similar "wholesale" newspaper material has enormously increased, we shall probably find an enormous proportional rise in the number of rural weeklies also.

The census of 1880 gave in the United States a total number of workers of both sexes and in all occupations of 17,392,099, and of this nearly one-half, or 7,670,493, were classed as agricultural. These ratios will probably not be sustained in the new census, owing to the drift of population to the cities and factory towns, but it is safe to say that at present at least three-eighths of our workers, and presumptively of our population and of our voters, are on the farm and among the class whom the country newspaper most directly touches. The vital change, therefore, in the forms and conditions of country journalism is a matter of the utmost interest when that journalism stands in immediate relations to a body of our voters which can hardly number less than five millions. If we could search the matter to the bottom, we should very likely find that the many farm agitations now in progress are due almost as much to the shifting in country journalism as to any other intellectual cause, and particularly so at the West.

A distinctive institution of the old rural life was known as "the county newspaper," whose specialty was the petty news of all the county towns. Almost every rural county, if of fair size, had one of these journals, much more rarely two. They were partisan to the core, they never abated their partisanship, and because they had a sort of local monopoly of printed opinion, they exercised collectively a mighty party influence. But at present the "county" newspaper proper is decidedly on the wane—has, indeed, almost passed away. The term survives, but only as a bequeathed one, and the old monopoly has been broken. Where there used to be one country newspaper, we now find two or three, representing various parties, cheaper by 50 per cent. than the old "county" sheet, and two subscribed for at the old price of one. Let any new party grow up

or a serious schism arise in an existing party, and it cannot be "howled down" by an autocratic county sheet as in the old political days, and can, with very little cost, establish an organ or organs of its own. The Farmers' Alliance at the West, for instance, has apparently found no dearth of country papers willing to support its cause. A few decades ago such a movement would have found very few indeed. Moreover, the rivalry in news-hunting, or rather the higher desire of news by the reader, has, among the multiplied country papers, much diluted the acidities of partisanship.

While, however, the political effects of the new state of country journalism are undoubtedly benign, and are showing themselves in looser party ties among the farmers, the good effects of that cheaper journalism on their moral and mental nature are much less obvious. The material wave of "brainy, breezy" journalism, of flashy writing, of distorted ideas as to "news," has not been stayed in our cities, but has passed with full flood into the country newspapers also. How far they are vitiating the rural readers there are few means of judging; but it was noteworthy that when, some months ago, the Springfield Mass., *Homestead*, an agricultural journal widely circulated among the farmers, asked its readers to send in a list of what they deemed the ten "best books," the first ten voted for by a great majority were works of fiction, and a very large number of the replies came from the mothers and daughters of the farm. Either the fathers and sons did not care to reply, or they did very little book-reading at all.

CORSICA IN SUMMER-TIME.

AJACCIO, June, 1891.

LIKE that very taking model, Miss Lydia Nevil of St. James Place, London, in Mérimée's most charming story of 'Colomba,' I write to you partly for the pleasure of dating my letter from Ajaccio. There has been considerable talk of a daily line from Nice to Corsica, making the passage in six hours; but when one has seen the comparative poverty of the island, it seems very doubtful if it would pay. The line, in fact, that carries the mails thither just now has failed. The talk on my way over was of this failure and the severities of the French bankrupt law, which are not small. The law enacts that, among other consequences, the bankrupt is deprived of all his political rights. Morelli, the owner of the line, is a Senator from Corsica, but, being no longer even an elector, he has been expelled from the Senate.

I had been waiting for nearly a year to get across, but, on the two weekly sailing days, it seemed particularly possessed to blow great guns. Once I started by way of Piombino, on the Italian coast, meaning to go to Elba and find some way of crossing from there directly to Corsica; but that day large trees were snapped off and there was no boat. I rarely find myself tempted to envy the yachting people who come here in the winter; and, indeed, many of them comfortably lay their craft up in port and pass two or three months at the hotels. I now understand thoroughly why so few people, out of all the thousands of pleasure-seekers who come to the Riviera, cross to Corsica, and why they will always continue to be rather few. It is the turbulent Mediterranean, wofully chilly in winter, and not the dangers of travel in the country—well dissipated now if they ever existed—nor the primitive nature of much of the accommodations.

By a slight coincidence the *Bel Ami*, the jaunty little sloop of M. Guy de Maupassant, was lying in port as we steamed out. It was a descriptive passage in some of Maupassant's writings—in 'Une Vie,' I think—that first made Corsica real and modern for me. We sailed at four in the afternoon, and were at Bastia the next morning. The town is backed up against high mountains. One is not expected to admire Bastia so much as Ajaccio, inasmuch as it is hardly a winter colony and resort for foreigners, like the latter, but its landscape is quite as pleasing, and one thinks more of it after having seen Ajaccio. They are not far from the same size, having both somewhere about 20,000 inhabitants. The houses run up into the air six, eight, and even ten stories. The same thing is true all over Corsica, even in the villages. This is novelty number one, and not a prepossessing one; it gives a tenement-house and factory-town look, and is very encouraging to squalor. It is, with little doubt, the vestige of Genoese tradition; the Corsicans threw off the yoke, but remain bound to this day to the fashions of their former rulers. Inquiring, in order to have the local theory of the usefulness of these sky-scraping buildings, the reply was made to me, "It is the custom," and again, "Building-stone is very cheap here, you know; it costs almost nothing."

I made the point of my first excursion into the country Cardo, the little village where Colomba and Ors' Anton took final leave of the friendly bandits and their comic dog "Brusco," and tried to induce them to leave the country. It is high in the hills, and very like, in all respects, say Falicon, above Nice. A few houses in front are neatly lime-washed, as if it were expressly done for the effect from below; the rest are all brown, gray, black with age, mere stone-heaps, as rude as the habitations of the ancient cliff-dwellers. It was hardly less deserted and silent than the famous *maquis*, the brushwood thickets which I traversed in mounting by a short cut. It looks down upon the vacant port of Bastia, but not upon the thick of the town, which clusters around one of those warm-colored old Vauban citadels that ornament most Mediterranean ports. The slopes were grown principally with almond and olive-trees and patches of grain. Country houses or cottages, as everywhere in the island, are few. The Corsicans are famous office-holders; at Nice, for instance, they abound in the Custom-house, the railway, and among the prison-guards. There is something in the Corsican character which leads him to desire to "boss" his fellow-men, if only as a concierge. These functionaries in course of time secure their retreat and return to the island to live upon their pensions, but even they do not aspire to a little house and garden: some curious instinct of sociability leads them to herd like the rest in the unpleasant tenement-houses. In the vacant port, I finally found that my still-cherished plan of crossing from Bastia to Elba direct, on the return, was not possible of realization. I knew already there were no steamers, but there used to be some boats freighting across iron ore from Porto Ferrajo to be smelted here, which, as the distance is short, and for the adventure, might have served for once. I applied at these smelting-works, and found that they had ceased to be operated.

In the afternoon it rained so furiously that veritable sheets of water in the streets disputed the right of way with the passengers. I employed part of this time in looking up, in the city library, our old friend James Boswell's narrative of his journey in Corsica, in the year 1765, which I had not been able to see until then. He proposed—seeker for celebrity and always athirst for the personal acquaintanceship of great men—to make a journey in Corsica because it was a country that no traveller had yet seen; and he came out, with a letter from Jean Jacques Rousseau, to find the patriot-hero Paoli, then in the midst of his wars. I followed upon his trace in many ways; and found myself the more comfortable in my lumbering diligence for thinking over how he made much of his journey on foot, knocking down chestnuts from the trees, drinking from the clear brooks, and likening himself, with a youthful gusto, to the primitive men. In Paoli's apartment, in the Franciscan convent at Corte—which I find replaced by a spick-and-span new one, only the ruined tower of the church remaining—he rallied the well-to-do monks, telling them they were "nihil habentes et omnia possidentes." It is hard to repress a smile at the pleasant incongruity when we find him saying, of the insurgent chief, in the wilds of Corsica, "I quoted to Paoli, on this occasion, some of the sagacious remarks of my respected friend Samuel Johnson." He was overawed by Paoli at first, but soon made great headway with him and all the camp, even to the point of putting on the dress, and singing "Hearts of Oak" to these patriots. There is but a single fault in the brief narrative: it is so very short.

There is a section of railway, narrow-gauge, built out of Bastia, and another out of Ajaccio. They have not especially got into the guide-books as yet. On the long gap from Corte southward, necessary to complete the through line, work is actively progressing. Then there are two important branch lines, one down the flat and malarious eastern coast, and one to Calvi, which I found a prodigious old fortress on a rock, in fertile country, beaten upon almost continually by violent winds. The eastern plain is being well planted with eucalyptus and with vines and fruit-trees and turned to very profitable account. We made a sharp bend to the west, up the small valley of the Golo. You have an excellent view of the two decisive battle-fields—but twelve miles apart—of Borgo and Ponte Novo, where, respectively, Corsican independence, as against the French, was first brilliantly successful, and then completely wiped out. It is hard to see how the fevers can follow up the turns of such fine dashing torrents as the Golo, as they are said to do, but the evidence seems little open to dispute. "If here," I say to myself, "why not into other mountain districts elsewhere?"

I got off at the village of Ponte Leccia, to make a sort of pilgrimage to Paoli's birthplace at Morosaglia, and so over the high pass, the Col de Prato, to the springs of Orezza. There are Corsicans who put Paoli, as their hero, almost above Napoleon. It is extraordinary what an interest he excited in his time, when you consider the small scale of these operations. Rousseau, as I have shown, Alfieri, Frederick the Great, and Joseph of Austria were his friends and admirers, and not for political reasons, as Pitt might have been, who leagued him against the French. He had a great deal to do with forming the character of the young Napoleon, and it would not be difficult, perhaps, to find a trace of the influence of this very early champion of independence even in our own Washington. This district

was the chosen fastness of Corsican insurrection: the lonesome convents hidden in the solemn chestnut forests sheltered Paoli and his council of government. The convent at Morosaglia is built, as it were, by rule of thumb; it is as rude and massive as if dug out of rock or clay, and its only ornament is a baroque belfry, typical for the class. You may recall two years ago some little stir over the bringing back of the remains of Paoli from London. He died there in 1807, and had a tablet in Westminster Abbey. I had a letter to the Canon Saliceti, who was the chief manager of this whole important affair. He is an amiable enthusiast about his subject, and a descendant of that Saliceti, representative of the people, one of whose acts was to arrest the young Napoleon at Nice, on the eve of his first campaign in Italy. The committee were flatteringly received by the notabilities of England—dined, among others, by the ex-Empress Eugénie, took the body with pomp through the streets of London, and afterwards had a triumphal procession in the island.

The monument is not a statue, but the ancestral house in which Paoli was born. It had pretty much fallen to decay. It belonged to a Corsican of high position, Franceschini Pietri, the chamberlain of the Empress Eugénie, and he presented it for the purpose. It is very plain, and in the restoration has probably been made, like Napoleon's house at Ajaccio, somewhat better than it was in the time of its famous owner. He is buried in the chapel. Beside him is a bust which, like the fine bronze statue at Corte and other portraits, is a pleasant surprise. I was rather prepared for a mountain warrior in goat-skins; on the contrary, here is a gentleman of the court in lace ruffles and queue, with even a point of humor on his handsome face. You think of Washington and Goldoni at one and the same time. I looked into the school at Morosaglia, and, later, into the college at Corte, both still supported in part by small funds he left them in his day.

You go down at a hand-gallop, on the other side of the pass, into the Castagniccia, the chestnut country *par excellence*. I took pains to taste some of the flour made from the chestnuts, the bread of the poorer people, and found it slightly sweet and very good. The villages peep through the tender, sunny green of the almost unbroken chestnut foliage, and delicate ferns carpet all the ground. I dined in company with the Mayor of Piedecroce, and after dinner we went out to look down upon the signal fires which the villagers lit up one after the other in honor of the fête of St. Pierre on the morrow. The Mayor says as many as 2,000 people come to drink the water of Orezza in July and August. It is a very agreeable, sparkling water. There is an extensive bottling establishment in the bottom of the valley. People don't go down there except to drink, but stay at one of the three villages high above. The Baths of Lucca are slightly recalled, but the accommodations are much more primitive and not greatly cheaper.

A Corsican officer at Nice, who gave me a letter, had wanted to wager that I would find nowhere in the world a slovenlier city than Corte. I had thought this perhaps was merely his own lack of experience in travel; but he was right. Corte, the old capital, is a highly picturesque crag reeking with filth, and this trickles down even into the modern portion, in which some excellent modern improvements have been made. The diligence ride to Vizzavona to resume the train is a long five hours' pull, over steep roads, but always good. The people in the villages are small and spare, the women about as often blondish as brunette. The costume can hardly be called picturesque: the men wear, almost as a uniform, poor suits of brown corduroy and nondescript cloth caps. You would often confound them rather with grimy English factory hands. The corduroy is afterwards cut down, in baggy fashion, and clothes the children too. You are exactly alongside the highest mountains, snow-capped and very Swiss. Here the Russian grand-duke, George, had been lately hunting the wild boar and the moufflon. On the seat beside me sat a little schoolmistress, who told me a very good bandit story of late experience in her own school-room. Your informants on this subject generally begin by declaring that it is all stuff and nonsense, "des fumisteries," and end by relating quite naturally experiences of their own that show it to be of frequent occurrence. The vendetta and a popular leniency towards assassination in quarrels are undoubtedly about as common as ever. But it must be borne in mind that bandit, in Corsica, means one who is under the ban of the law, and not necessarily, if at all, a robber. I was assured by many that one could go safely from one end of Corsica to the other, at any hour of the day or night, and I am much inclined to believe it. The bandit, you are comfortably assured, even if you should fall in with him, would befriend rather than injure you, unless you should tell the gendarmes of him.

The famous Bellacoscia outlaws are still at Bocognano, as they have been for forty years, in spite of a late determined new attempt of the Prefect to break them up. They have a hamlet, flocks, herds, and crops of their own. He sold off their cattle. At Ajaccio, through fear or sympathy, nobody would buy them, and they were sent to Marseilles. An acquaintance at Bocognano told me they were good to the needy. A poor man could go to them and get fifty or sixty francs, or they would give him an order on a merchant in Ajaccio for a sack of flour, to be repaid. I don't know whether these orders are honored as were those of Castriconi, in 'Colomba,' who used to write certain requests to people—oh, quite without threats; that was not his style—or whether they are a legitimate commercial transaction. One of my drivers, by the way, claimed to have driven Colomba in his own stage—the old lady of Sartene who passed for the original of that character. He says she was a little old woman, so short that her feet would not touch the floor, so she sat herself comfortably down upon it; she was illiterate but very intelligent, and had made several journeys to Paris in carrying out her schemes of retribution.

The pretty valley down to Ajaccio seems tame after the Castagniccia. It is cultivated only in spots; the original *maquis* covers all the rest. One of the local journals in Ajaccio was complaining indignantly of the ex-Empress Eugénie because she had just bought an estate at Cap Martin, near Monte Carlo, instead of buying it on the Casone. The Casone is an area out at the end of the suburban street, the Cours Grandval, where hotels and boulevards have been slightly begun by large companies and abandoned. "Yes, those Bonapartes," says the journal in question, "they were born in Ajaccio; when they were in power they did nothing for us, and now they squander their millions elsewhere." To make this the more interesting, it is to be mentioned that the domain was presented to the town by Napoleon's uncle, Cardinal Fesch. The grotto of Napoleon's boyhood is out there, too. It consists of some large smooth boulders, disgustingly daubed over with names, many in red and blue paint, in a way I have never seen approached in iconoclastic America. There is not the slightest attempt made to protect it.

Ajaccio is not embowered in oranges and roses like the Riviera towns, though, on the other hand, its oranges are of much better quality. It is very little embellished as yet; the strangers who come to pass the winter have not made much impression. The bay, the sea, are charming, and so is the Rue du Marché with the marble statue of the First Consul in a ring of palm trees in the centre; but elsewhere there is much that is unkempt. The climate is capable of producing everything, but, as it is, or used to be, in some parts of Southern California, it has not yet done so. All this time the temperature was delightful: it was summer, but it was not hot; as you walked the wide dirt promenade of the Place Diamant, under the somewhat scrubby sycamore trees, the sun was warm, but the breeze, coming in from the sea in front, was exactly what you would wish it to be.

I was at Napoleon's house about the anniversary of the battle of Waterloo. The lowest of the three stories is the show apartment, with very dilapidated furniture; the upper two have been occupied by the Princess Marianne, an obscure relative by marriage, who very lately died there. As her effects were being sold off, I was able to secure a small souvenir of the famous homestead, which would not have been so easy on ordinary occasions. The house is still very plain, though it was improved both by Joseph and Napoleon, after his return from Egypt. It is a part of one of the general high masses of stone and mortar, in a dingy street; no garden, no privacy, no elbow-room. It could never have been possible to keep away from the swarming neighbors, any more than it was in the bullet-riddled Gaffori house at Corte, that other residence of Charles Bonaparte. When all the Bonaparte boys and girls were piled in here in their youth, it must have been pretty close quarters.

The Bonaparte tradition does not gain in sentiment here among its earliest memorials. Even the monuments that had everything in their favor are somehow lacking. The principal one is by Viollet-le-Duc. It is in the edge of the Place Diamant, by the sea, and represents the bronze Emperor on horseback, a handsomer Marcus Aurelius, with his four bronze brothers, four kings, marching at the corners. The line of direction is said to be straight for St. Helena, and all their backs are turned upon the Place. In spite of Viollet-le-Duc, it is amateurishly classical, thin, and unreal. But after awhile there begins to be something fantastically striking about all these bronze brothers riding and striding away towards St. Helena, ignoring sublunary things and all that lies between. It is weird, as if they were walking in their sleep and ought to be waked up.

William Henry Bishop.

MIRABEAU.

Paris, June 25, 1891.

M. Louis de Loménie did not have time to finish the great work on Mirabeau which he had begun, and in which he used the papers left by the great orator to his executors. His son, M. Charles de Loménie, has published the notes left by his father, and has added just enough to them to give some unity and continuity to the work. Two volumes appeared a few years ago, in which M. de Loménie set forth the stormy youth of Mirabeau, his

quarrels with his family, his trials. The third volume, which now appears together with a fourth, begins in the year 1786, three years before the convocation of the States-General. We find Mirabeau at Berlin, where he had been sent on a secret mission and where he studied the work of the great Frederick. M. de Calonne was employing Mirabeau in this fashion in order to muzzle him (*pour le museler*). He arrived in Berlin just after the death of the great Frederick and remained in that city for six months; when he returned to France, he was in hopes of obtaining some official mission. "I am worth more than the majority of the King's ministers by reason of my birth, and as for my capacity, I leave it to be judged," were the terms he used in a letter to his friend the Abbé de Périgord (afterwards Talleyrand); but he obtained nothing and had to return to his work of pamphleteer. He immediately attacked M. de Calonne, to show him that "s'il était bon à prendre, il n'était pas bon à laisser."

During the period which preceded the Revolution, we find Mirabeau aspiring, like all Frenchmen, for new institutions, without knowing exactly what these institutions were to be or how the change should be effected. His mind was like a mirror in which images appeared only for a moment. There were, however, some fixed points in his sentiments. He had been a victim of arbitrary government, he had conceived for it a great hatred; he had incurred the severity of his own caste, he had conceived a great hatred of all privileges, and become a liberal like La Fayette, Alexis de Noailles, Mathieu de Montmorency. He had not learned much from the philosophers—he speaks coldly of Voltaire; but he greatly admired Rousseau; the "school of nature" was his natural school. Was he not led by his passions and his instincts as much as, if not more than, by his intelligence?

With his extraordinary gifts of elcquence, his Southern ardor, his tempestuous disposition, his activity which amounted to restlessness, he was born to be the most powerful instrument of the Revolution. As soon as the States-General were summoned, he went to Provence in order to take his place in the States of the province among the nobility; but the Tiers counted upon him. "The Tiers," he writes to his sister, "follows me with marks of confidence and enthusiasm. . . . I have never seen a *corps de noblesse* more ignorant, more stupid, more insolent. These people would make of me a tribune of the people if I did not take care." Mirabeau, who would have been willing to be chosen by the nobility of his province, was excluded by it; he was elected at Aix and at Marseilles as deputy of the Tiers-État, and chose to stand for Aix. It is interesting to know what were the articles of the *cahier* of the Tiers of Aix. The desiderata of this cahier were—liberty of the press and individual liberty, constitutional government and ministerial responsibility; "the clergy ought not to form an order in the State; its property ought to be sold." The cahier did not go as far as the abolition of hereditary nobility; it only asked that nobility might not be acquirable by money, that all feudal rights consisting of payments in money should be redeemable, and all personal servitudes abolished. It insisted upon the conservation of the provincial States of Provence.

On the whole, this cahier was not very revolutionary; it expressed the average opinion of the country. Unfortunately, the local agitation which accompanied the elections to the States-General produced what Taine calls a spontaneous anarchy; there were great disorders in many places; the defeat of the *ancien régime* was certain; a noisy and arrogant party was adverse to reform, but in reality everything had to be reformed, and when the States-General assembled, France was in a sort of chaos. Each deputation of the States made its separate entry in the Salle des Menus-Plaisirs of Versailles; the Duc d'Orléans, who appeared in the deputation from Crépy-en-Valois, was saluted with great applause. When the deputation from Aix was introduced, "some hands," says Grimm in his correspondence, "were disposed to render it the same homage, but they were stopped by a murmur of disapprobation, the sense of which will be understood by M. le Comte de Mirabeau."

Mirabeau was much offended; he felt himself suspected by the Assembly. He had no influence at first, but he was not a man to submit to this sort of antipathy, and he soon forced himself on his colleagues and made them feel his power. He founded immediately a paper with this epigraph: "Novus rerum nascitur ordo." There were at the time only privileged papers, submitted to a censor, like the *Mercure de France* and the *Journal de Paris*. Mirabeau asked no permission, his paper was suppressed; he immediately published another under the title, *Letters of the Comte de Mirabeau to his Constituents*.

In the struggle between the two privileged orders and the Tiers, Mirabeau took sides with the Tiers. For six weeks, discussions took place on the mode of taking the vote in the States; this discussion was in reality a struggle between the privileged and the non-privileged classes, between the old and the new régime. A great Minister would have found in the States the elements of an upper and a lower house, on the English model; but there was no great minister. It was absurd to have three permanent assemblies; finally the Tiers absorbed the nobility and the clergy. One of the elements of a good constitutional system was absent, and royalty found itself before a single chamber.

Mirabeau made his début in these important discussions. He soon was recognized as a leader in this reunion of 500 individuals, thrown together from all parts of the country, without a chief, without any hierarchy, all free, all equal, all wishing to be heard before they would listen themselves. Mirabeau wished to save the monarchy; at the same time he wished to keep his prestige with the people. The task was almost impossible. The royal sitting of June 23, 1789, in which the King spoke as the ancient kings did in the *lit de justice*, and announced his determination to preserve the ancient orders of the kingdom and modified some of the resolutions of the States-General, was followed by an insurrectionary movement. The legend will have it that Mirabeau, speaking to M. de Dreux-Brézé, who brought to the Tiers the order to retire, said: "Allez dire à votre maître que nous sommes ici par la volonté du peuple, et que nous n'en sortiront que par la force des baïonnettes." In reality, from Mirabeau's own account to his constituents, the scene was less melodramatic. M. de Brézé said: "Gentlemen, you know the intentions of the King"; upon which Mirabeau said: "We are assembled by the will of the nation and we will only go out by force." To which M. de Dreux-Brézé answered: "I can only recognize in M. de Mirabeau the deputy of the bailiwick of Aix, and not the mouthpiece of the Assembly." It is not at all likely that Mirabeau should have spoken of Louis XVI. as "votre maître"; but, with the exception of this word, the legendary answer differs little from the true one. This answer has done as much for the fame of Mirabeau as all his speeches.

The States-General had now become a National Assembly—Mirabeau seems to have been the first to use this word. The fear of a military *coup d'état* brought on the revolutionary movement of the 12th, 13th, and 14th of July and the destruction of the Bastille. Mirabeau did not appear at first (his father died on the 11th); but he reappeared on the 14th, when the revolution was triumphant; and when the King made his appearance in the Assembly, it was Mirabeau who reproved the marks of loyalty and fidelity, and asked "that a silent respect should mark the first appearance of the Sovereign in a moment of sorrow." "The silence of the people is the lesson of kings," was not said by him, though it was afterwards attributed to him, but by the Bishop of Chartres.

The forced journey of the King from Versailles to Paris was the real beginning of the Revolution and of the dictatorship of Paris. The taking of the Bastille was but an incident: it was the distinctive trait of the revolt, it gave a popular image to the Parisian insurrection and to all the insurrections which began over all the surface of France; in truth, what fell with the Bastille was the whole ancient administrative order. The troops were removed from the capital, and there was no authority left in it but a new administration which received its inspiration from the multitude. During this first period of the Revolution, Mirabeau is hand in hand with such men as Camille Desmoulins; he is a popular idol, a new "Roi des Halles." When the first constitutional discussions begin in the Assembly, he appears in another character: the fiery tribune shows in himself the qualities of a statesman; he knows, he feels, that something must be thrown athwart the great currents of popular opinion. He took a great part in all the constitutional work of the Assembly of 1789, in the declaration of rights, in the abolition of the feudal system, in the questions of a second chamber and of a royal veto. The real struggle was between Mounier, who, with Lally-Tollendal, Clermont-Tonnerre, and M. de la Luzerne, represented what may be called the English ideas, and especially the principles of a second chamber and of a royal prerogative, and Sieyès, the famous author of the pamphlet on the Tiers, who would have no second chamber, and who had unfortunately more influence with the Assembly. Sieyès was a vain, dogmatic, dialectic theorist. "Politics," said he, "is an art which I think I have brought to perfection."

Mirabeau vacillated, it must be confessed, between these two influences. His good sense showed him the wisdom of Mounier's ideas; his love of popularity inclined him at times to the solutions which seemed more in accordance with the popular caprice. On the question of a second chamber, Mirabeau abandoned Mounier; he did not even speak; he knew that the majority had made up its mind. He was firm on the question of the necessity of the royal sanction for the laws. "Without the royal sanction," he said, "I would rather live in Constantinople than in Paris." His ideal seems to have been a strong king and a strong chamber, working in unison for the people. Was the right of veto to be absolute, or was it to be only suspensive? Great discussions took place on this point. Mirabeau was in favor of the veto, but his utterances were such that he was not considered or represented as a partisan of an absolute veto. The Assembly adopted the suspensive veto, and in consequence of this vote Mounier and his friends

left the Constitutional Committee. A new Committee was appointed. Sieyès and Talleyrand remained in it.

While the constitutional work was going on, the revolutionary work did not cease; and, in fact, the revolutionary work had its constant influence on the Constitution-making. The insurrectionary forces of Paris invaded Versailles, entered the Assembly, and forced the King to return to Paris. The conduct of Mirabeau during the 5th and 6th of October was at least equivocal; he made a violent attack on the Queen on the morning of the 5th, but disappeared during the next day, while the château was invaded by the mob and the guard were massacred. A short time after these events, the Duc d'Orléans and Mirabeau dined together at Versailles at M. de La Marck's. "I saw clearly," writes M. de La Marck, "that there was between them a coldness which excluded the idea of a secret understanding." A few days afterwards, the Duc d'Orléans suddenly asked M. de La Marck, "When will Mirabeau serve the Crown?" M. de La Marck was surprised, and merely said, "It seems to me that thus far he has not moved in that direction." We shall, however, see Mirabeau take that direction, and we may follow him in his efforts for the preservation of the monarchy.

DEMOCRATIC ASSUMPTIONS—IV.

EQUALITY.

LONDON, June 18, 1891.

No "fundamental" of the democratic creed is more assailable—as none has been more successfully attacked—than the dogma of human equality. The proposition that all men are born equal, if looked at as an axiom of political science, is indeed patently absurd. The difficulty nowadays for any thinking man is not to perceive its absurdity, but to understand the reasons which have at times commended it to universal acceptance. Difference, we now see, is the law of the universe; it is certainly the law of human nature. Men vary in physical strength, in intellectual capacity, and in moral sensibility. Look at the world at any given period of history, and the phenomenon which arrests attention is the inequality of individuals and of classes. Strength and weakness, knowledge and ignorance, riches and poverty, every attribute or circumstance you like, serves to discriminate one person from another. A human being's destiny is in many things fixed from his birth. The distinction of sex alone introduces an element of diversity and inequality into the whole framework of society. People do not start fair in the battle of life. Predestination is a theological term which has fallen out of use with the decline of the school of divinity to which it belonged; but predestinarianism, as it existed before the birth, so it will survive the death, of Calvinism, for it expresses one way, and that to many persons a natural way, of looking at the facts of life. Whoever compares a class of well-fed, well-trained, well-conducted schoolboys with a gang of young thieves, will feel inclined to assert that some men are as obviously predestined to the practice of ordinary virtue as others are foredoomed to become the slaves of crime and vice. To say that a good deal of this radical difference results from social arrangements, will not suffice to reëstablish our belief in the natural equality of man. We are compelled to ask whence arise the inequalities of society, and history drives us back to the conclusion that the harshness of social arrangements itself originates in the injustice of nature. To say more on this subject is unnecessary; to denounce or expose the paradox that men are born equal is, at the present day, to "force an open door."

But though the doctrine that all men are created equal neither needs nor repays confutation, every serious student must feel that the arguments used to expose the favorite error of Rousseau and of his acknowledged or unacknowledged followers are unsatisfactory. It is easy to show that men neither are created equal, nor, if they could all for a moment be placed on the same footing, would be likely to remain equal for a day; but it is impossible to show that an inaccurate formula which has been accepted as true not only by isolated thinkers, but by whole generations, does not contain an element of substantial truth. Nor, if any man will divest himself at once of democratic and of anti-democratic prepossessions, is it difficult to see what this element of truth is. Mankind are distinguished from each other by obvious and important differences, but they are also linked together by the similar attributes of a common humanity. On these admitted facts two opposite views of society may be based. A well-ordered polity, it may on the one hand be contended, should correspond with and even foster the differences which distinguish one body of men from another. This is the notion which underlies the aristocratic or oligarchical theory of government. The true object, it may on the other hand be maintained, of every social or political arrangement which in the long run benefits mankind, is to cherish and give prominence to the characteristics which are common to all human beings. This is the idea which supports every form of popular government. Thinkers or statesmen who are influenced by the belief that the attributes wherein men resemble one another have a far deeper and more permanent importance than the characteristics in which they differ, will always tend towards the opinion not that men are equal, but that they should, as far as possible, be treated as though they were equal. This is the doctrine of human equality put in a reasonable form. Its absolute truth, even in this shape, admits of doubt, but a candid arguer would find it difficult to maintain that, as thus understood, the doctrine is clearly untrue.

This rational belief in equality has stood the test of time. Its defence ought to be based on the frankest admission that the idea of a golden age when men, being all equal and all happy, lived unoppressed by tyranny and uncorrupted by priestcraft, is one of the idlest dreams which ever deluded mankind. For if we want to see how great are the triumphs of equality, we must confess that the earlier stages of human development have been marked by inequality among individuals and classes. Society has originated, if we are to trust history, in the rule of the few who were strong over the many who were weak. Equality is not the beginning from which society starts, but the goal towards which enlightened civilization tends. Belief in equality—that is, in the supreme importance of the characteristics common to humanity—has released men in one sphere of life after another from the bondage and tyranny of nature. Equality before the judgment-seat, equality in the church, equality in civil rights, equality in political power, have, by the slowest degrees, and only in the more civilized portions of the world, been first the ideals of jurists, prophets, and statesmen, and next have become principles which more or less govern the world. Trust in human nature may well be exaggerated, but that it has in civilized countries produced gigantic and often beneficial results admits not of denial.

Two considerations, moreover, which are often overlooked by reasoners who, from the time of Plato downwards, have fixed their gaze upon the evils, both theoretical and practical, of democracy, have in the modern world strengthened the belief in human equality. The first of these considerations is that the inequalities which exists in a given society rarely correspond with the real and essential differences which make one man the superior of another. It was not true in the days of Rousseau that men in France or elsewhere were born naturally equal, but it was true, towards the end of the last century, in France, as in almost every other European country, that the inequalities of society were absurd and oppressive. Throughout the whole French nation it would have been difficult to discover a human being less fit to rule France than Louis XV. To subject the wisdom and knowledge of Turgot to the prejudice and weakness of Louis XVI. was so far from being a recognition of the essential differences between man and man, that it was in reality the successful attempt to give to a man with the talents of a locksmith the right to control a minister endowed with the genius of a statesman. The second of these considerations is, that there is nothing more real, though few things are less recognized, than the equality of ignorance. Politics do not yet approach the character of a science. Where the wisest know little, the difference is, or seems, little between ignorance and knowledge. This is the reason why a good number of sound arguments against the follies of democracy fail to command much attention. Mr. Huxley, for example, has recently reproduced the old and instructive comparison between the management of a ship and the guidance of the State.

"I should be sorry," he writes, "to find myself on board a ship in which the voices of the cook and the loblolly boys counted for as much as those of the officers upon a question of steering or of reefing topsails, or where the great art of the crew was called upon to settle the ship's course. And there is no sea more dangerous than the ocean of practical politics."

All this is true, but Mr. Huxley forgets, what the citizens of a democracy are only too apt to remember, that a competent politician has nothing like the knowledge of statecraft that a competent mariner has of seamanship. If the leading statesmen, moreover, of England or of the United States cannot claim to be captains when called upon to guide the vessel of state through the ocean of politics, the average elector or citizen thinks at least that he can give a verdict on the political issues submitted to his decision with more intelligence than a loblolly boy can steer a vessel during a storm. Whether this opinion be true or not, it is easy to see why in England, France, or America, the doctrine of human equality, if put in a reasonable form, should receive general assent. Be this as it may, one thing is certain: belief in equality is essential to confidence in democracy. Sap the general confidence in this dogma, and you shake the foundation of popular government.

Two influences are undermining this basis of democratic faith. The predominant philosophy of the day is anti-democratic. Any mode of abstract thought can, it is true, combine with any theory of politics. The orthodox piety of Johnson and the theological scepticism of Hume were each compatible with Toryism. The utilitarianism of Hobbes made

him the advocate of despotism; the utilitarianism of Bentham made him the supporter of popular government. Locke, who formulated the creed of the Whigs, was the intellectual parent of Rousseau, who was the prophet of despotic democracy. Yet certain phases of philosophic opinion favor, if they do not produce, certain conditions of political thought. One author after another has shown that the theories of Locke, and still more of his disciples, were at any rate congenial to ideas of democratic equality. "Men, I think," he writes, "have been much the same for natural endowments in all times"; and there is no reason to suppose that to thinkers influenced by Locke's philosophy this statement seemed to savor of paradox. The last writers of repute who in England represented the tradition of the eighteenth century, were Mill and the now almost forgottten Buckle. All their speculations are colored by the assumption that the differences among men are in no sense innate, but in the main the result of circumstances; and Buckle announces this view in the loud-voiced, dogmatic manner which gave his writings for a moment such tremendous vogue, and has now robbed them of their really deserved reputation. "We have not," he tells his disciples, "any decisive ground for saying that [the moral or intellectual] faculties are likely to be greater in an infant born in the most civilized part of Europe than in one born in the wildest region of a barbarous country"; and he adds that "we often hear of hereditary talents, hereditary vices, and hereditary virtues; but whoever will critically examine the evidence will find that we have no proof of their existence." He teaches, in short, that the child of one of the savages who harassed the march of Stanley is as likely to be endowed with the intellect of Newton, or with the benevolence of Howard, as is the son of the most intellectual or the most spiritually minded of English, of French, or of German parents.

There is no need to dispute that this paradox, regarded as a paradox, calls attention to a constantly overlooked truth. At the present day we overestimate the influence of inheritance. The two points to be noticed, however, are these: the first is, that the view of human nature repeated with pompous exaggeration by Buckle directly favored the belief in political equality; the second, that a doctrine once held by all the best thinkers of their time could not now be unreservedly maintained by any man of education and ability. The 'History of Civilization in England' was published in 1858; in 1859 appeared Darwin's 'Origin of Species.' Among the many effects of the latter work one, at any rate, is, we may conjecture, permanent. Words like those uttered by Buckle will never be uttered again by a man of anything like Buckle's parts or knowledge. But the matter does not end here. Not only is the philosophy which fostered ideas of political equality discredited, but a mode of thought for the time rules the world which is in a sense anti-democratic. By this I do not mean that Darwinism has, or ought to have, any immediate bearing on the politics of the day. Few things are more absurd than the way in which partisanship endeavors to enlist science in its service. Darwinism will not be found any more serviceable for the defence, say, of the House of Lords than Christianity for the support of ecclesiastical establishments. The way in which the doctrines taught by Darwin and, still more, the popular perversions of these doctrines tell against democratic ideas is, that they produce an atmosphere in which these ideas cannot easily flourish. Notions such as those embodied in the phrases "struggle for existence" or "survival of the fittest" may favor individual freedom, but they certainly are not cognate to conceptions of human equality. Darwinism is historically and logically connected with Malthusianism; and Malthus was the opponent, and has hitherto been the invincible opponent, of Rousseau. The declining authority of theology, moreover, is, strange though the assertion may sound to democrats, injurious to the reputation of some democratic dogmas. The equality of Christians as members of the Church favors the equality of men as citizens of the State.

The circumstances of the day are pressing on the attention of democratic societies the differences which divide races and classes. Changes in the prevalent philosophy of the time tell slowly, if at all, on the political convictions of the people. It is, as I have insisted again and again, obvious facts, or at least appearances, which guide the conduct of mankind. Men's theories and actions are so curiously intertwined that while, on the one hand, their conduct is governed by their ideas, their conceptions in turn are the result of their conduct and their needs. The belief in equality has been hitherto readily entertained by an English or American artisan partly because it has flattered his self-love, and partly for the stronger and much better reason that the belief is, within certain limits, roughly or approximately in correspondence with facts. Bright once said that if you took by chance the first ten or twelve respectably dressed men who passed through Temple Bar, you could form out of them a ministry as competent as most cabinets. The saying, though no doubt uttered more than half in jest, contained a real meaning. There are thousands of Englishmen or Americans who, if placed by accident in office, would not show themselves markedly inferior to the politicians who nominally direct the destinies of civilized countries. *Quantulâ sapientiâ mundus regitur* is a profound and even a consolatory saying. It may have been cynically uttered, but a career such as Abraham Lincoln's reveals the grand side of what sounds like a mere sneer at human imbecility.

But the doctrine that all men in a civilized country are fit to perform the duties and entitled to enjoy the full rights of citizens, if true at all, is applicable only to countries and races which have reached a certain stage of civilization. This limitation on the belief in equality has, till recently, been of so little practical importance to an ordinary Englishman or American that he has been able to overlook its existence. But every day which passes thrusts this unrecognized limitation more decisively on his attention. Science has practically lessened the size, and prosperity has increased the population, of the world. In every land which is inhabited or ruled by the English race, ordinary men are awakening to the knowledge that they are liable to be pressed upon by classes and races which are certainly unlike, and, as Englishmen assume, are inferior to, the man of English descent. Does the American or English workman really think the Chinaman or the negro or the Japanese his equal? Are the artisans of any country prepared to concede willingly real equality, or even substantial justice, to the Jew? Is it at all certain that the inhabitants of America and Australia will, say, fifty years hence, be eager to welcome to full citizenship emigrants who bring with them the poverty and the ignorance of the Old World? The answer to all these questions is, to say the least, open to doubt. Every moralist who wishes well to his kind must hope that, as the struggle for existence becomes harder, and race presses upon race, the claims of justice may turn out to have as much might as they have right. However this may be, one thing is clear: whenever the democracies of England or of America are called upon to adjust their relations to other races, they will assuredly be compelled to adjust their political theories to new facts. That they will cling to the truth contained in the dogma of human equality is possible, and, it may be hoped, probable. But the applications of this dogma will, it may be expected, receive certain restrictions. The dogma itself will sink to the position of a probable, and, so to speak, qualified belief. It will gain in reasonableness, but it will lose what I may call the quality of inspiration.

AN OBSERVER.

Correspondence.

ST. GAUDENS'S STATUE OF REST.

TO THE EDITOR OF THE NATION:

SIR: A day or two since, I came across, among the telegraphic despatches in the daily papers, one about a very remarkable work of art which I have recently, by chance, had occasion to study and admire. I refer to the bronze memorial to the late Mrs. Henry Adams, executed by St. Gaudens, and placed by her husband over her grave in the cemetery near the Soldiers' Home at Washington.

To my surprise, and I may as well add disgust, I find this memorial, a draped female figure, referred to in the despatch (which I presume is going the rounds of the press) as a "figure of Despair, . . . heroic size, whose expression and attitude perfectly represent the subject." The notice adds that "the venerable rector of Rock Creek Church is shocked, and longs to get this unchristian monument out of his churchyard." I know nothing of the rector in question; nor, until I chanced to be in Washington in May last, had I ever heard of that last work of St. Gaudens, which cannot fail to excite a great deal of attention hereafter; but it must be singularly annoying, both to the sculptor and to Mr. Adams, to see this striking moument heralded over the land as "a figure of Despair"! To one, also, who appreciates a work of true art, such a heralding is singularly exasperating.

The figure in question is in bronze, heroic size, and is marked by the strength, boldness, and severe simplicity, as well as originality, of the artist's treatment. In my judgment, St. Gaudens has done nothing more memorable. It represents Rest—sudden rest, and complete cessation from weariness and pain — at the Grave. It is certainly true that there is about it nothing of the conventional mortuary art—that dreary array of anchors and urns and angels and crosses and lambs, those monuments of the artistic ineptitude of skilled workmen in stone which make modern cemeteries terrible and cause the man of educated taste to wish to be buried in the sea—there is in St. Gaudens's production nothing of all that, and, in so far, it constitutes a new departure; but it is a departure for which it is high time, and one most desirable to be made.

Not improbably the rector of Rock Creek Church may have failed to appreciate at first glance what is, in point of fact, one of the few really great and noticeable mortuary memorials in existence, one in which St. Gaudens can take justifiable pride, and the visitor a deep, and almost painful, pleasure. But it is

sincerely to be hoped that those who are led to visit the Rock Creek Cemetery from the desire to look upon, and I may add to study, one of the most striking and suggestive of modern bronzes, will go there with a sufficient degree of elementary art education not to mistake a memorial symbolic of Rest for a "Figure of Despair"! D.

NEW YORK, July 11, 1891.

THE TARIFF ON "SMALL POTATOES."

TO THE EDITOR OF THE NATION:

SIR: I wonder if the enclosed interesting circumstance about Custom-house decisions will be new to you. A letter arrives to me of the most ordinary dimensions, is marked "Suspected liable to customs duties," is found to contain only some foreign postage-stamps—some bought at the post-office and thus new, some used ones, taken from letters of the sender, and having therefore no value whatever at the place from which sent. Both kinds are assessed for duty by the Boston Collector of Customs, and at the full value of similar stamps in the hands of dealers already on this side of the water.

The interesting thing is, that from this it follows that the printed paper money of other countries must also be dutiable, as printed matter, and every five pound note of the Bank of England which is in the possession of a traveller when he lands here must pay a duty of $6.25. The same must be true of every piece of paper money imported by banks or other institutions.—Yours truly,

WILLIAM B. CLARK.

WELLESLEY HILLS, MASS., July 8, 1891.

Notes.

GINN & Co., Boston, will issue during the present month 'Ethics for Young People,' by Prof. C. C. Everett of Harvard.

D. Appleton & Co. announce 'The Faith Doctor,' by Edward Eggleston.

The Gossip Printing Company, Mobile, Ala., have nearly ready 'Alabama State Troops, in Camp and Field,' by T. C. DeLeon.

Mr. George A. Aitken, author of a Life of Sir Richard Steele, has now completed his work upon Arbuthnot. The volume, which will be issued by the delegates of the Clarendon Press, Oxford, will probably appear in the autumn. Besides containing all that is known of the Doctor, it will give a collection of all the miscellaneous (non-scientific) writings that can with certainty be assigned to him. There will also be a full bibliography. Mr. Aitken, who is quite a young man in years, is one of the private secretaries to Sir Arthur Blackwood, the permanent Under Secretary to the British Post-office. Like Anthony Trollope, Edmund Yates, Clement Scott, and many others who have served on the staff at St. Martin's-le-Grand, the young author illustrates the happy combination of the performance of postal duties with the pursuit of letters.

The poems of Emily Dickinson, the Amherst recluse whom Andrew Lang calls "a poet who had constructed her own individual 'Ars Poetica,'" continue in active demand, the eighth American edition being already in preparation. An Arabic translation made in Syria has passed through several editions.

Under the title, 'Unhappy Loves of Men of Genius' (Harpers), Thomas Hitchcock gathers six short biographical essays, previously published separately, upon Gibbon and Madam Necker, Dr. Johnson and Mrs. Thrale, Goethe and Charlotte von Stein, Mozart and Aloysia Weber, Cavour and the Unknown, and Irving and Mrs. Carlyle. The substance and treatment of these topics are sufficiently indicated by the title; there is no novelty in the story, except that the love of Cavour is comparatively little known. The author's style is pleasing, and, as a series of sketches of infelicity in love among the men of genius and brilliant women, the volume is entirely adequate.

Mr. James Vila Blake adds to the list of his varied works a new volume of papers upon out-of-the-way characters and stories, 'St. Solifer, with Other Worthies and Unworthies' (Chicago: Charles H. Kerr & Co.), in which he mingles curious information with fancy, and plays at moralizing. The range of sources mentioned is from the 'Decameron' to the 'Zend-Avesta' and Greek mythology, and the resulting essay is one of those nondescripts of easy reading which must be classed with the "sports" of the summer season, being neither fiction, religion, nor good plain sense, yet partaking of each.

The admirers of Dr. John Brown, the author of 'Rab and His Friends,' owe a debt of gratitude to the family, who have secured the publication of some admirable personal sketches of him and his sister by a lady whose acquaintance with them was like that of one of the household. The full title of this brief, but delightfully familiar, memoir is 'Dr. John Brown and His Sister Isabella: Outlines,' by E. T. M'Laren (Edinburgh: David Douglas). The book is beautifully printed and bound and makes a thin quarto. Two excellent portraits of Dr. Brown and one of his sister are given, and there is also an engraving of Symington church and churchyard, which makes a pretty tailpiece to the volume. As the present issue is marked as the fourth edition, the merit and charm of this memorial seem to have been already appreciated by the friends of this favorite of many minds.

Six years have elapsed since we noticed Mr. C. P. Kunhardt's 'Small Yachts: Their Design and Construction Exemplified by the Ruling Types of Modern Practice' (*Forest and Stream* Publishing Co.). The first of the remarkable series of contests between American centre-board sloops and British cutters in 1885, 1886, and 1887 had not taken place, we think, before this useful work appeared. The *Puritan* would shortly beat the *Genesta*, next year the *Mayflower* the *Galatea*, and the third year the *Volunteer* the *Thistle*. The *Puritan*, the *Mayflower*, and the *Galatea* are figured in the new and enlarged edition of 'Small Yachts' just published, and there are other traces of these international trials of invention and seamanship. While the "ruling types" have undergone a change, the general scheme of Mr. Kunhardt's treatise remains unaltered, and his folio volume is as comely as it is practically serviceable to yachtsmen of large as well as small craft.

We have received from the publishers revised editions of Appletons' well-known 'General Guide to the United States and Canada' and 'Handbook of Summer Resorts,' together with a new 'Canadian Guide-Book' from the competent hand of Prof. Charles G. D. Roberts. This work opens at Niagara Falls and closes at Yarmouth, N. S. As would be expected from the author's name, the descriptions, besides being minute, have a literary flavor not commonly associated with guide-books. There is an appendix for sportsmen. Numerous illustrations and plans and three folding maps accompany the text. The typography is open and clear, and rather more readable than that of Sweetser's compact 'Maritime Provinces.'

A new 'Handbook of Amherst, Mass.,' has been prepared and published in that pleasant college hill-town by Frederick H. Hitchcock. The College naturally occupies the larger half of the compilation, and is abundantly illustrated with statistics and with plates. The work supplies a want, and we therefore wonder that Mr. Hitchcock did not consider an index indispensable.

After three years, a second edition of Prof. Goldwin Smith's familiar letters to the Toronto *Week*, 'A Trip to England,' has been published (Macmillan).

'New China and Old,' by the Rev. A. E. Moule (London: Seeley & Co.), consists of the recollections and observations of a thirty years' residence in China. The different subjects which are taken up, life in an open port, in an inland city, in the country, travelling, the house of a mandarin, etc., are treated with such a fulness of information and illustration from personal experience as to give the book a distinct value. There are also chapters upon Buddhism and Taoism as they affect the life of the people, and upon ancestor worship. This, the author, as well as many educated Chinese, regards as the greatest obstacle to the success of Christianity in China. The people in general look with indifference on a countryman who rejects either of the national faiths; but the Chinaman who renounces the worship of his ancestors not only cuts himself off from his kindred, but suffers a severe pecuniary loss in forfeiting his share of the property set aside for the expenses of the annual sacrifices. Mr. Moule writes soberly but encouragingly of the work of the missionaries and the general progress of the nation within the past thirty years. There is an excellent account of the educational system of China, showing the various processes by which a lad passes from the village school to the examination for the highest degree. A few illustrations from photographs add to the attractiveness of this interesting and suggestive book.

The article of greatest interest in the July number of the "Papers of the American Historical Association" is "The Fate of Dietrich Flade," by Prof. George L. Burr of Cornell. It augurs well for the development of historical studies in this country to see the wealth of labor and research—research not only into printed sources, but into all accessible documentary material—intelligently brought to bear to reconstruct a story which had become distorted, and then well-nigh forgotten. Nor has the intelligent research been wasted, for the story as now revealed to us throws a ray of searching light into some of the darkest recesses of the witchcraft craze of the sixteenth century. The other papers of the number are two academical discussions—one on "The Philosophic Aspects of History," by Mr. William T. Harris, and one answering the question, "Is History a Science?" by Prof. R. H. Dabney—and two Canadian papers, one by George Stewart, on "Historical Studies in Canada," and the other an historical retrospect of the relations between Canada and the United States, by John George Bourinot. The latter is an able presentation of the Canadian side of many questions that have been settled more or less completely by diplomacy.

The Publications of the Modern Language Association of America, 1891, April–June, contain a valuable collection of "Great Russian Animal Tales," with an introduction, a synopsis of the adventures and motives, a discussion of the same, and an appendix, by A. Gerber, Ph.D., Professor of German and French in Earlham College. The stories are fifty in number, and are condensed from an unpub-

lished version, by Prof. Leskien of the University of Leipzig, of A. F. Afanasieff's 'Narodnyia Russkiia Skazki,' already somewhat familiar to English readers from the 'Russian Folk-Tales' of Ralston, who purposely, however, omitted stories about animals. One of the most valuable features of Prof. Gerber's work is the synopsis of the adventures and motives of the tales, and their discussion under general classes instead of under each separate story—a method of arrangement which might be applied with great economy of time and space to future collections of folk-tales. All that is wanting is an alphabetical index of incidents, arranged under catchwords. The comparative notes are conveniently distributed under the heads of literary variants, oral variants, collections of variants, and source. Prof. Gerber has read extensively in the field of animal tales, and his conclusions as to the origin and diffusion of this class of stories are sound and scholarly.

The first Bulletin of the Library of Bowdoin College comes to us bound up with the obituary record of the college graduates for the year ending June 1, 1891. The other marked feature of the Bulletin is a list of poems illustrating Greek mythology in the English poetry of the nineteenth century, by Edward C. Guild. The arrangement is perspicuous and the result interesting. On this showing, Prometheus and Proserpine have had the greatest attraction for our poets. Cupid and Psyche, Hero and Leander, Jason and Medea, Hercules and Dejaneira, Admetus and Alcestis, Orpheus and Eurydice, and Endymion, lead the remainder. Crœsus and Sappho are allowed to slip in among the gods, demi-gods, fabled and semi-historic personages of the list.

The Senate of the University of Michigan has begun publication of a *University Record*, to appear four times during the year, and to chronicle the educational and scientific work going on under the auspices of the University. The scheme embraces even abstracts of meritorious theses. In No. 2 we read that the legislative appropriations to this institution since 1867 have amounted to $1,800,687; Wisconsin falls but little behind in munificence to its own University.

Mr. Francis Galton's communication to the Royal Society on a method of indexing finger marks is printed in *Nature* for June 11. He had already proved "the extraordinary persistence of the papillary ridges on the inner surface of the hands throughout life," and that "the impression in ink upon paper of each finger-tip contained, on the average, from twenty-five to thirty distinct points of reference" absolutely persistent with the rarest exceptions, so that any two would serve to identify a person. He now recommends his system of indexing as an immense reinforcement of A. Bertillon's anthropometric measures, used in the criminal administration of France and other countries; but its prime value in his own eyes has relation to racial and hereditary inquiries, concerning which use we shall hear from him by and by. His indexing can be applied direct to the fingers themselves without the aid of an impression. The forefingers are most variable in pattern.

Referring to an observation by Mr. Moncure Conway, in his article in *Harper's Magazine* for May, upon the English Ancestry of George Washington, a correspondent writes us: "As regards the account given by John Walker, in his 'Sufferings of the Clergy,' of the Rev. Lawrence Washington, it should interest Mr. Conway to know that the original manuscripts upon which Walker's work is founded are preserved in the Bodleian Library, Oxford. There are about 25 to 30 volumes in all. Of these some 7 are of a biographical nature, consisting of letters from persons who gave facts set forth in the printed work. Being myself one of those British who are interested in the question of Washington's ancestry, when at Oxford, last year, in pursuit of historical researches at the Bodleian, I made a rapid glance over these volumes, which, unfortunately, are not indexed, hoping to come across a letter from the 'ancient gentleman of his neighborhood' who had given a good character to the Rev. Lawrence; but my hasty search bore no fruit. An American who can give more time to the search than I was able to afford, may hope for more success. Some one should make a proper search, for, if the 'ancient gentleman's' letter be unearthed, it may fairly be expected to disclose the name of the 'poor and miserable' living which the Rev. Lawrence Washington was given after he lost that of Purleigh."

—In our prospectus the other day, of Oliver's History of Antigua, we mentioned some of the New England families connected with that island, including the Redwoods of Newport. This name, as everybody knows who has visited the famous Rhode Island watering-place, is attached to one of the most attractive proprietary libraries in the country, consisting of some 35,000 volumes, stored, amid many objects of art and curiosity, in a building of which the earliest portion dates back to 1750. The library itself was begun in 1747, when Abraham Redwood the second, who had become a Quaker by convincement, gave £500 towards the purchase of books, and Henry Collins the land for a building. It was in great danger of being scattered to the winds, and did suffer incalculable losses, during the British occupation, and it has experienced a great many vicissitudes since, ending in its being rich in collections and poor in endowment. The story of it has just been told in a stout volume, 'Annals of the Redwood Library and Athenæum,' edited by George Champlin Mason, and published by the institution itself. Mr. Mason had charge of the last enlargement of the building, in 1875. He had the artist's instinct to follow the action of George Snell in 1858, when Peter Harrison's beautiful old design was respected in making an addition, and this was a singular good fortune for the library. Mr. Mason has gone through the official records, culling out what was notable in the regulations or the gifts, and adding copious biographical sketches and other notes. He shows by the books mentioned in wills how cultivated the first settlers of Newport were, and he is able to print the entire list of the original Redwood purchase. Dr. Ezra Stiles, the most, if not the only, noted librarian of Redwood, is cited as deducing "the abilities of the seventy or eighty worthy ministers who first settled in New England from the libraries they brought with them from England." Two items in the 'Annals' are to be remarked for their historic significance, and we preface them with the reminder that Newport, after having lost its slave trade, retained its pro-slavery sympathies, partly in consequence of direct commerce with the South, and partly owing to the annual influx of Southern visitors. On Feb. 13, 1860, the directors of the library declined to place on file a free copy of the *Anti-Slavery Standard*; on Feb. 13, 1865, they voted thanks and free use of the library to Col. T. W. Higginson for his lecture on the "The Freedom of South Carolina." The work, which is uniform in size with the author's 'Reminiscences of Newport' and 'Annals of Trinity Church, Newport,' has been very handsomely printed, and is embellished with numerous portraits. The ancient initial letters we recognize as having done service in Florentine printing-offices more than three centuries ago.

—The two volumes of Max Müller's 'Lectures on the Science of Language,' after passing through numerous editions essentially unchanged, have now, almost thirty years after their first appearance, been accorded, through the destruction of the old plates, a most encouraging opportunity for a fresh start in life (Charles Scribner's Sons). "It is difficult indeed," says Prof. Müller, with much plausibility, in his preface, "for an author who lives beyond the number of years generally allotted to scholars, to know what to do with his old books"; but what our author finally determined upon in this particular case was "to make one more attempt to render these volumes as correct as he [I] could." This he seems to have done, but he has not rendered the volumes particularly correct. His plan was not to rewrite or reconstruct them, but to patch them up. He added a page here and there, and now and then he reluctantly parted with a paragraph that had come to be too bad for anything. He corrected some of the bad etymologies that had figured as illustrations, and here the German-English side fared better than the Greek and Latin, for there are swarms of blunders left of the sort that connects *Naxos* with νῆσος and derives *nomen* from **gnomen*. These were well enough for "'fo' de war," but it seems too bad to use up new plates on them now.

—There is evidence of a largeness of view and a generosity of thinking that have always characterized this writer in his readiness to recognize the important results of recent investigation. For instance, he accords rightfully to Brugmann's 'Grundriss,' as representing the third stock-taking in the history of the science, a position at the opening of a third period in its development. Still, he does not seem to have assimilated the results of these recent years, nor to have readjusted the body of his thinking to them. They appear merely as a veneer over the old material. Thus, insisting as he does still on ranking the science of language among the physical sciences, instead of among the historical sciences, where it belongs, he is led into perpetuating his utterly meaningless discrimination between phonetic change and "dialectic change" (*cf.*, *e. g.*, ii., 216ff, 253). The changes, he says, which give French *quatre* for Latin *quatuor* and English *four* for Gothic *fidwôr* are ascribable to phonetic corruption, which, "being due to a relaxation of muscular energy, admits of a simple physiological explanation, and depends on causes which are always the same." On the other hand, however, *quatuor* and *fidwôr* "can only be explained as the result of dialectic variation"; and while phonetic changes "can be reduced to very strict rules," dialectic changes "cannot, at least not with the same unerring certainty." This is the most hopeless quiddling, and simply shows that the most essential discussions of the last fifteen years have passed our author harmlessly by, and left his views upon the most fundamental questions of the life of language absolutely free from contamination.

—A recent number of the *Revue Internationale de l'Enseignement* contained a noteworthy paper on Isaac Rousseau, the father of Jean Jacques, by Prof. Eugène Ritter of the University of Geneva, well known for his studies of the 'Confessions' and the correspondence of the author of 'Emile.' Isaac was

a watchmaker by trade (*maître et marchand horloger*), like his father David before him, but he varied his occupation by giving dancing lessons with two partners, one of whom fell under the displeasure of the Calvinistic authorities for having asserted that a man forced to change his religion would not be damned, and had to apologize on his knees. By the terms of the partnership Isaac secured for himself the privilege of travel abroad, having inherited a nomadic disposition, both racial and family, which he was to pass on to his more distinguished son. He accordingly spent some years on the shores of the Bosphorus, there being a Genevese colony at Pera, whose pastor was the chaplain of the Dutch Legation. From this clergyman he brought back in 1711 a letter to the association of pastors in Geneva; but a far more important consequence of his return was a fresh paternity, of which Jean Jacques was "le triste fruit," since the mother died in childbed. Isaac was in 1715 appointed one of the collectors of the clerical association just mentioned, and was on the way to civic promotion when his unlucky love of hunting led him to quarrel with a land-owner who objected to his passing through a field of standing grain, and to wound him. To avoid the law he fled the Genevan territory, was condemned in contumacy, and was an exile for years, abandoning his family. As Rousseau bore his father's lineaments in his face, so Prof. Ritter finds in the career of Isaac the destiny of Jean Jacques. He throws a great deal of light on the latter's descent and family connections, correcting many errors in the 'Confessions'—all involuntary, as Prof. Ritter believes, and unpremeditated. Incidentally he gives from the records a picture of Genevan manners which might easily be matched in Puritan New England.

— In the 'Sitzungsberichte der königlich preussischen Akademie der Wissenschaften zu Berlin' (May 28, 1891) there is an interesting essay by Dr. F. Liebermann entitled "Ueber den Quadripartitus, ein Englisches Rechtsbuch von 1114." The 'Quadripartitus' is the earliest Anglo-Norman law-book, concerning which very little was known until Dr. Liebermann published the results of his investigations. The work was compiled in 1114 in Wessex, perhaps at Winchester. The author was an ecclesiastic, perhaps in the employ of the royal exchequer. His object was to collect the Anglo-Saxon laws, together with the legal enactments of William the Conqueror and Henry I. The work begins with the Dedication, in which the writer dwells on his misfortunes and the immorality of the Norman nobles. Then follows the Prologue, in which he emphasizes the prominent place of Cnut's laws in Anglo-Saxon legislation, gives a brief sketch of English history from Cnut to 1113, and outlines the plan of the whole treatise. In Book I. the Anglo-Saxon laws are translated into Latin, with those of Cnut as the basis of the collection. This first book is identical with the 'Vetus Versio' of the Anglo-Saxon laws. No manuscript of these laws approaches in completeness this portion of the 'Quadripartitus.' In Book II. the author, turning from the past to the present, brings together important documents relating to the reign of Henry I., which throw much light on the constitution of England. This book ends with the canons of the English synod of 1108, and a valuable version of Henry I.'s enactment concerning the hundred and county courts.

—According to the Prologue, Books III. and IV. were to deal with procedure and theft respectively. They are not extant; perhaps they were never written. The 'Quadripartitus' was used by the compiler of the 'Leges Henrici I.,' the two collections having much in common. Twysden, Lappenberg, Cooper, Kolderup-Rosenvinge, Hardy, Thorpe, and Schmid published fragments of the former, but they had little knowledge of the work as a whole. Dr. Liebermann will soon publish a book entitled 'Quadripartitus, ein Englisches Rechtsbuch von 1114,' in which he will print the Dedication, Prologue, and Book II., and give a fuller account of the work and its author. He will print Book I. in his forthcoming edition of the Anglo-Saxon laws.

THE HOUSE OF MURRAY.

A Publisher and His Friends: Memoir and Correspondence of the Late John Murray, with an Account of the Origin and Progress of the House, 1768–1843. By Samuel Smiles, LL.D. 2 vols. With portraits. Charles Scribner's Sons. 1891.

This work contains a very rich collection of documents for literary history, especially during the period of the first half of this century. The great book-making age which began with Scott and Byron is the real subject of the volumes, and it is passed in review with an abundance of figures and details. Authors of every degree of reputation and books in every department of publishing receive more or less extended notice, and, to make the view complete, the periodical literature of the time is closely attended to. Murray lived in the world of books and was a great potentate there. The history of his affairs touches authors and publishers, literature and trade, poetry and politics; and no phase of his varied connections is neglected. In such a mass of matter the compiler might have been easily confused to the confusion of his readers; but the selection is well-proportioned, the arrangement is admirable, and the knowledge conveyed is great in amount. The mere names of writers mentioned would make a dictionary and the titles of books a catalogue, but a thread guides safely through the labyrinth; and Murray himself, so far from being lost in his retinue, keeps the throne in Albemarle Street, and impresses his personality as a man of business and a friend of literary men so constantly upon the reader that these memoirs of publishing never cease to be biography also.

Nevertheless, it is not possible for the reviewer to do more than pick and choose from the abundance at hand, and naturally we shall confine our attention to the great names. Byron is the pride of the house. Murray had the luck to discover him in "Childe Harold," and from the time when the noble lord (and such he always was to Murray) came in to look over the sheets and say to the enthusiastic publisher, "You think that a good idea, do you?" as he lunged at the book shelves with his cane, down to the burning of the Memoirs of the dead poet in the library fire, Murray never failed in his devotion. Byron's letters to his publisher have long been familiar and highly prized, and here we find not much that is new from his pen; but on the other side Murray's own letters complete the correspondence. He sent to the poet a great deal of flattery and not a little good advice, given with more tact than effect. The attitude of Byron's admirers in England towards the genius of their idol is brought out most strikingly, and was worth all the illustration it receives. There has been no such enthusiasm for literary men and their works, with the exception of the *furore* awakened by Dickens, as that which was so generously given to Scott and Byron. Sir Walter yet holds his own against all the chirping of the field, and one still feels the point of Lord Holland's compliment on reading the 'Tales of My Landlord'—"We did not one of us go to bed all night, and nothing slept but my gout." The case is different with Byron's 'Tales,' and one cannot read the chorus of praise without being keenly aware of the exaggeration due to the time. The elder D'Israeli, to take a strong case, writes to Murray of "The Siege of Corinth":

> "I am anxious to tell you that I find myself this morning so strangely affected by the perusal of the poem last night that I feel it is one which stands quite by itself. I know of nothing of the kind which is worthy of comparison with it. There is no scene, no incident, nothing so marvellous in pathos and terror in Homer or any bard of antiquity. . . . I could not abstain from assuring you that I never read any poem that exceeded in power this, to me, most extraordinary production. I do not know where I am to find any which can excite the same degree of emotion."

Gifford was a critic hard to please, but he yielded completely to the spell. He quoted from memory passages of "The Corsair"—a thing Murray had never known him to do before. The expression of his opinion is always the same: "I keep my old opinion of Lord Byron. He may be what he will. Why will he not *will* to be the first of poets and of men?" And on a later page he adds: "I have lived to see three great men—men to whom none come near in their respective provinces—Pitt, Nelson, Wellington. Morality and religion would have placed our friend among them as the fourth boast of the time." The infatuation of the ladies is represented by a passage from a letter of Mrs. Graham: "He provokes me with fancying himself hated. Good God! did he know how many have with breathless interest watched his steps, grieved for him, praised him, and, where they could not, turned aside their eyes, like the patriarch's pious son, that they might not look upon his frailties, he would never return all this with misanthropy." Sir Walter Scott's admiration needs no fresh illustration, but here is a characteristic passage in connection with his admirable review of the third canto of "Childe Harold": "No one can honor Lord Byron's genius more than I do, and no one had so great a wish to love him personally, though personally we had not the means of becoming very intimate"; and as to the review, he says: "If you think it likely to hurt him either in his feelings or with the public, in God's name, fling the sheets in the fire." Byron was so sensible of the "delicacy" and "tact" of this review that he confessed as much to Murray before knowing its authorship. But without further examples it is abundantly plain that the worship of Byron infected the most intellectual class as well as the sentimental public.

"Don Juan" called forth the most serious remonstrances, and Byron appears to have heeded his literary advisers less in the case of this work. Some question of copyright was raised by the first issue of the early cantos without name of either publisher or author, a fact which abandoned it to the pirates; and on the matter being taken in hand to recover the rights, a good deal of discussion arose about the nature of the poem. It is amusing to find Sharon Turner seriously reporting an opinion from Shadwell that it could be defended on "one great tendency of the book," which was "to show in Don Juan's ultimate character the ill effect of that injudicious maternal education which Don Juan is

represented as having received and which had operated injuriously on his mind." Lady Caroline Lamb, all of whose communications are lively, writes to Murray that he "cannot think how clever I think Don Juan is in my heart." She reminds him more than once that he used to call her his "left hand." The continuation of "Don Juan" drew from Croker a very striking letter of criticism, in which he told some home truths very directly. He has just read the third and fourth cantos: "What sublimity! what levity! what boldness! what tenderness! what majesty! what trifling! what variety! what *tediousness!*—for tedious to a strange degree it must be confessed that whole passages are." He goes on to compare Byron in this point to Brougham (whose "general powers of intellect" he thought unequalled among the men he knew), aptly enough, and he did not consider "Don Juan" so objectionable on moral grounds as to deserve severe condemnation; but some of its personal and political expressions seemed to him much more serious matters, and in what he added on this topic he showed sound judgment, though it was spoken in a high Tory vein:

"I cannot but think that if Mr. Gifford or some friend in whose taste and disinterestedness Lord Byron could rely, were to point out to him the cruelty to individuals, the injury to the national character, the offence to public taste, and the injury to his own reputation, of such passages as those about Southey and Waterloo and the British Government, and the head of that Government—I cannot but hope and believe that these blemishes in the first cantos would be wiped away in the next edition; and that some that occur in the two cantos (which you sent me) would never see the light. What interest can Lord Byron have in being the poet of a party in politics, or of a party in morals, or of a party in religion? Why should he wish to throw away the suffrages (you see the times infect my dialect) of more than half the nation?"

He winds up with a reminder that the Pulcian style is easily written, as had been shown by Frere, Rose, Cornwall, the "Blackwood Magaziners," and others, and it therefore was needful that Byron should distinguish his use of the form above the ordinary. Between comment and warning, the letter is an admirable critique.

Murray's personal relations with Byron were subject to some strains, but they remained friends. One thing that especially annoyed Murray was Byron's giving the copyright payments to friends, and he was justifiably irritated when Byron took back a copyright which he had yielded to Murray and asked him to pay the original liberal offer (£600) to Godwin, Maturin, and Coleridge.

"Your Lordship," he says, "will pardon me if I cannot avoid looking upon it as a species of cruelty, after what has passed, to take from me so large a sum—offered with no reference to the marketable value of the poems, but out of personal friendship and gratitude alone—to cast it away, on the wanton and ungenerous interference of those who cannot enter into your Lordship's feelings for me, upon persons who have so little claim upon you, and whom those who so interested themselves might more decently and honestly enrich from their own funds than by endeavoring to be liberal at the cost of another, and by forcibly resuming from me a sum which you had generously and nobly resigned."

The persons referred to are Rogers and Sir James Mackintosh. In the end Byron took the money for his own use. On the other hand, when Byron was offended by some corrections of Gifford's in "Manfred," and wrote smartly, Murray knew how to temper apology with reproof. The passage is characteristic enough to quote:

"I assure you that I take no umbrage at irritability which will occasionally burst from a mind like yours; but I sometimes feel a deep regret that in our pretty long intercourse I appear to have failed to show that a man in my situation may possess the feelings and principles of a gentleman; most certainly I do think that, from personal attachment, I could venture as much in any shape for your service as any of those who have the good fortune to be ranked amongst your friends."

Byron was certainly obliged to Murray for warm devotion, and, in the famous destruction of the poet's personal memoirs, for a deed of honor.

We have lingered upon the Byron chapters because of the already close association of Murray's name with the most famous of his authors, and also because the other literary memorials offer no such continuous story except in what relates to the *Quarterly*. This latter topic stands second in interest, and about it clusters a good deal of matter. Gifford himself is written of with some warmth of feeling. His character and career are carefully honored, and the respect and affection that Murray had for his editor are made to have full effect in diminishing the prejudice that surrounds his posthumous fame. He could write, it is acknowledged, with "terrible severity," but nobler qualities of his nature, his kind acts, and the soundness of his literary judgment are fully shown; there is no doubt but that these memoirs will raise his reputation. He was as much an element in the success of the *Review*, probably, as Murray himself, to whom it owed much because of the pride he took in it and the untiring energy with which he worked for it. The corps of contributors was a strong one, but secrecy long kept them obscure, and most of them were men whose lives, if written, are seldom read. The brief notices here found and the expression of character in one or two selected letters are welcome and help to vivify the names of the period. George Ellis, Sir John Barrow, Rose and Frere, the Hebers, and a score of others are thus brought forward, and they make a group of interesting minds. Sir Walter Scott, Southey, and Croker are more prominent because they were in a peculiar sense the pillars of the cause. Sir Walter, as always, writes entertainingly, kindly, and busily, showing the workshop of a laborious life and the exhaustless energy of his mind. Southey affords some of the best expressions of an author's vanity and deception about his works. Though he wrote for Murray at a hundred guineas an article, and averaged more than one article to the number, he looked on his ponderous histories and prolix poetic tales as his real work, and he had as little doubt that "Kehama" was an "acorn" and the "Lady of the Lake" a "Turkey bean," each with its appropriate length of years, as he had that he had beaten Napier out and out as an historian of the Peninsular War. He was, however, the chief dependence of the *Quarterly*, and invaluable, as Lockhart remarked, in giving it a certain tone agreeable to its constituency. Lockhart summed up Croker, too, very justly, if tartly, when he said that Croker had "the bitterness of Gifford without his dignity, and the bigotry of Southey without his *bonne foi*"; but that he had something besides is plain enough to a tolerant and attentive reader of his letters. His edition of Boswell, which every one knows Macaulay "crushed," sold, we are informed, 50,000 copies. Lockhart himself is finely characterized by Sir Walter in a long letter written to defend him against those who criticised his appointment to the editorship; and the portrait, though it presents him at his best and as Sir Walter knew him, is lifelike. His cold reserve and superciliousness were wholly compatible with fine critical discernment, and in these letters it is only the last that is to be found.

The total impression made by the "Reviewers" is of a body of men able in mind, of much breadth of information, and just in ordinary judgments, notwithstanding the violence of expression which some of them indulged in when their prejudices were interested or their anger roused. It is with pleasure that one notes how constantly and vigorously Murray discouraged personality both in his own *Review* and in *Blackwood's*, when he had a property interest in the latter, and how sound a principle he lays down upon the point. Even then the modern magazine was beginning to develop and its ideal to appear. He protests also against both "talent" and learning when introduced only for their own sake. "Information," is his cry, "news," as much in the magazine as in the press; and his convictions on the point are expressed with a certainty and definiteness such that a modern editor would have little to add to them.

The more important persons of the Memoirs are grouped about Byron and the *Quarterly*, but there are scores of authors who cannot be included in either of these sets. Murray's drawing-room is the only place where all are to be met, and there a procession is constantly passing of historians, poets, and travellers, native and foreign. The list is a long one, and includes many names of distinction in other walks than belles-lettres, and it is seldom that a name is mentioned without some incidental information of a personal or literary nature. The letters of Coleridge, for instance, relating to a translation of "Faust," are full of character-illustrations; there is the usual complaint about "bringing even my intellect to the market," and the self-esteem that kept no bounds. The most noticeable point is the statement that, just as he had improved "Wallenstein" by his translation of it, he meditated remodelling "Faust," giving it a finale, and so bringing it, recast and rewritten, on the stage. He would not in this case retain more than one-fifth of the original. The plan, of course, fell through. He complained very much of the reception of "Christabel": "Let it not be forgotten that while I had the utmost malignity of personal enmity to cry down the work, with the exception of Lord Byron there was not one of the many who had so many years together spoken so warmly in its praise, who gave it the least positive furtherance after its publication." The vanity of authors receives ample illustration. The hope of immortality was in many breasts a certainty. Wordsworth's self-confidence was large, and is commonly thought exceptional, but Southey and Coleridge thought as well of themselves, and the lesser fry kept the fashion of the time. Hogg, for instance, writes of his 'Pilgrims of the Sun': "I cannot help smiling at your London critics. They must read it over again. I had the best advice in the three kingdoms on the poem—men whose opinions even given in a dream I would not exchange for all the critics in England—before I ever proposed it for publication. I will risk my fame on it to all eternity." Sir Walter, great in this as in other qualities of character, took the best measure of his genius; and it is amusing to find him, in his curious review of the earlier Waverley novels, saying against himself all that his recent critics have urged. Thus he writes of the 'Black Dwarf,' for instance: "The narrative is unusually artificial; neither hero nor heroine excites interest of any sort, being just that sort of *pattern* people whom nobody

cares a farthing about." This is as much as any devil's advocate could say.

In the way of character-illustration nothing is so out of the common run as Murray's account of Frere's marriage:

"Apropos of Mr. Frere: he came to me while at breakfast this morning, and between some stanzas which he was repeating to me of a truly original poem of his own, he said carelessly: 'By the way, about *half an hour ago* I was so silly' (taking an immense pinch of snuff and priming his nostrils with it) 'as to get *married*.' Perfectly true. He set out for Hastings about an hour after he left me, and upon my conscience I verily believe that if I had had your MS. to have put into his hand, as sure as fate he would have sat with me reading it all the morning and totally forgotten his little engagement."

He had, a note informs us, left his wife at the church so as to show his poem to Murray. But, as we have already said, the literary information of these volumes is inexhaustible, and it is the more useful because most of it concerns the less distinguished writers.

Murray himself deserves a parting word. His real character is that of a man of business, and a full account is given of the trade-affairs of the house. He acted up to a high standard of business morals, and sustains in his relations with the trade a reputation of the most honorable sort. The dealings which he had with authors were remarkable for their liberality and fairness, and the repeated testimonials of literary men when writing to each other, as well as when thanking Murray, show how unusually pleasant they found it to conduct business with him. He had a love of literature and a true and deep regard for genius. He was proud of his connection with books and men of letters. He made money out of them, and succeeded in his ambition of leading in his trade, but he did this without contracting a sordid habit or incurring enmity. He was able to heal what differences did arise in the course of business. The history of his relations with Moore, after the destruction of the memoirs, and the correspondence he had with the younger Disraeli after their serious quarrel over the founding of the unsuccessful daily, the *Representative*, are excellent examples of a forgetting spirit in the trials of friendship. Personally, too, he made and kept friends, and it is observable that, although he did not at once attach men to him, his good qualities seem to have grown upon acquaintance, and those who regarded him most warmly were the friends who had known him longest and most nearly. The fact that his social position was that of a man in trade is occasionally obvious enough, but it appears rather in the bearing of others towards him than in his own actions or habits of thought. He was praised by the best and won their respect, and in the hundreds of transactions referred to in these volumes he appears invariably with honor, unless a single instance of "a trick," involving nothing more than sharpness, and immediately acknowledged by Murray to have reflected some discredit, be excepted; and it was a trivial affair. The celebrated gibe, imputed to Moore and supposed to be directed at Murray—"Now Barabbas was a publisher"—could not have found a butt less to its purpose. The saying is here restored to Campbell, who made it and imposed it on some other publisher. For Murray the reader of these memoirs will entertain only a high regard.

THE EVOLUTION OF MARRIAGE.

The Evolution of Marriage. By Ch. Letourneau, General Secretary to the Anthropological Society of Paris, and Professor in the School of Anthropology. [The Contemporary Science Series.] Charles Scribner's Sons. Pp. 373.

THE history of the development of any social institution has this for its most noticeable effect upon the mind of the reader: it suddenly changes the perspective in which he is in the habit of looking at the world, and he sees, if only for a moment, that modern civilization is but a brief breathing-place, won by a nearly desperate struggle out of vast regions of gloomy savagery which have preceded it and which surround it. In the case of Prof. Letourneau's book on marriage, the space given to modern, and especially to non-French, ideas on the subject is even disproportionally small, and the feeling of disgust at the whole human race with which one rises from its perusal, is more profound than the true condition of things demands. One feels the need of reading some fine poetry or work of fiction to remind one's self of the very different region in which the relations between the sexes can, in man's present high estate, have play.

M. Letourneau is the author of two important works—one on the 'Evolution of Morality' and one on 'Political Evolution in the Different Human Races.' In the present book, his main object is the collection of all the facts in regard to the marriage relation as it has existed at all times and in all places, and even among the higher animals. These facts have been patiently gleaned from the writings of ethnographers, travellers, legists, historians, and zoölogists. These facts are extremely curious and interesting when taken by themselves; their theoretical consideration, with a view to the foundation of what the author calls the science of ethnographical sociology, he modestly leaves to others. This modesty is not altogether misplaced, for the few generalizations and prognostications which he permits himself have not the ring of the work of a scientific mind of a high order.

The point most strongly brought out by this immense array of facts is that women have been treated, without exception, in primitive times, like slaves, or rather like domestic animals. Our present strict ideas in regard to sexual morality, invaluable as they are in marking us off from a state of savagery, have their unquestionable origin in the right of proprietorship in women like that in goods and chattels — a proprietorship which we find claimed in savage and even in barbarous countries without any feeling of shame. Women are a form of property which it is difficult to guard, both because they are

"unskilful in defending themselves, and because they do not bend willingly to the one-sided duty of fidelity that is imposed on them. Their masters, therefore, protect their interests by a whole series of cruel restraints, rigorous punishments, and ferocious revenges, which are left at first to the good pleasure of the marital proprietors, and afterwards regulated and codified. . . . I have previously shown, in my 'Évolution de la Morale,' that the unforeseen result of all this jealous fury has been to endow humanity, and more particularly women, with the delicate sentiment of modesty, unknown to the animal world and to primitive man."

Among men, as among animals, the development of the marriage relation is by no means always in harmony with the degree of the development in general. Very primitive societies sometimes practise monogamy, and very brutal customs are sometimes found among races much more advanced in other respects. Among animals, the carnivora usually live in couples, but that is not the case with the South African lion. Bears, weasels, and whales, on the other hand, are monogamous. Sometimes nearly allied species have different conjugal customs: the white-checked peccary lives in troops, while the white-ringed peccary lives in couples. Among monkeys some are monogamous and some are polygamous: the *Macacus silenus* of India has only one female, and is faithful to her unto death. Birds furnish the most remarkable instance, among animals, of devotion to a single mate; they are superior in this respect to all other classes of animals.

The idea of treating wives, whether one or many, with the most shocking brutality is peculiar to the human being of the male order; it is unknown among animals. The words humanity and brutality ought, in fact, to interchange their meanings, as far as conduct towards women is concerned:

"It would be difficult to imagine a more cruel servitude than that of the Australian woman, always beaten, often wounded, sometimes killed and eaten according to the convenience of her owner. The Fijians . . . amused themselves with beating their mothers and with binding their wives to trees in order to whip them. A Fijian named Loti, simply to make himself notorious, devoured his wife after having cooked her on a fire that he had forced her to light herself. No kind of ferocious cruelty was condemned by the morality of the country."

And other savage races use all their skill in inventing other nameless forms of torture for women. There have been only two exceptions of any importance to this general rule of barbarity towards women. Among the ancient Egyptians and among several of the Berber tribes a different state of things has prevailed. Diodorus affirms that in the Egyptian family it is the man who is subjected to the woman, that "the Queen receives more power and respect than the King, that among private individuals the woman rules over the man, and that it is stipulated between married couples, by the terms of the dowry contract, that the man shall obey the woman." This assertion of Diodorus is confirmed by the demotic deeds—at least for families which were in the possession of property. The laws regarding inheritance were such that women were often richer than men, and could dictate how the marriage contract should be drawn up. Married women held their property separate from their husbands, and could make contracts without their authorization. The husband was careful to stipulate, as a precaution, that the woman should take care of him during his life, and pay the expenses of his burial and tomb. This state of things lasted until the time of Philopator, who, in the fourth year of his reign, reduced women to their customary state of subjection by a royal decree to the effect that henceforth all transfers of property made by the wife should be authorized by the husband. This remarkable legal independence of women in Egypt, which had, of course, its natural effect upon social relations, may perhaps be referred to the influence of the Berber races, which, according to Egyptian traditions, played an important part in the foundation of ancient Egypt.

A certain emancipation of women seems to be a characteristic trait of Berber societies. At the present time, among the Touaregs of the Sahara, who have preserved their independence and the purity of their race better than the Kabyles, the rich women enjoy a social position analogous to that of the ladies of ancient Egypt. In spite of the Mussulman law, the Targui woman practically imposes

monogamy upon the man; she would immediately seek a divorce if her husband attempted to give her a rival. "Absolute mistress of her fortune, her actions, and her children, who belong to her and bear her name, the Targui lady goes where she will and exercises a real authority." They know how to read and write in greater numbers than the men, and it is to them, says Duveyrier ('Touâreg du Nord'), that is due the preservation of the ancient Lybian and ancient Berber writing. Leaving domestic work to their slaves, the Targui ladies occupy themselves with reading, writing, music, and embroidery; they live like intelligent aristocrats. Many of their customs indicate delicate instincts which are absolutely foreign to the Arabs and to the Kabyles. They strongly remind us of the times of the Southern troubadours and of the *cours d'amour*. But with the Touaregs, as with the Provençals and the Acquitainers of the twelfth century, who may well have had Berber ancestors, these diversions and gallantries were for the higher classes, and did not prevent the slavery of women among the poor. "It is important also to remark that the independence of the Berber lady rests on the magic power of money. 'By means of accumulation,' says Duveyrier, 'the greatest part of the fortune is in the hands of the women.'"

Among the Kabyle women there remains no trace of the maternal family and very little of the advantages which it generally confers on wives and mothers. One custom, however, recalls the proverbial liberality of the Berbers in conjugal matters: the married woman is allowed the "right of rebellion." If she has just complaints to make, she begins by telling one of her relatives, who fetches her back to her father openly, the husband not being permitted to oppose. After four years of separation, the union is dissolved. But this is the only remnant of the freedom which the Kabyle women once enjoyed. And "we are acquainted with the date at which the last seal was placed on their subjection. It was only a hundred and twenty years ago that the men refused henceforth a legal position to women in the succession of males. At present the Kabyle woman, whether married or not, no longer inherits."

The freedom which the possession of property conferred upon women in later Greek and Roman times is better known. Anaxandrides makes an unfortunate husband bewail himself thus: "If, being poor, you marry a rich woman, you give yourself a mistress and not a wife; you reduce yourself to be at the same time a slave and fool." But this independence of women was not of long duration. The subjugation of the world by Christianity, as Sir Henry Maine has clearly shown, meant the resubjugation of women by their husbands. The early Church having formulated the opinion that the sexual relation is contemptible and vile, by an easy error of logic came to the conclusion that women are contemptible and vile as well.

The moral of all this would seem to be, for those who are not satisfied with the present position of woman, superior as it is to that which she has held at any other time or place (since her freedom is not now associated with looseness of manners), that an important means towards the desired result would be to obviate their still too frequent relative poverty. It is perfectly plain that nothing is more hazardous to the happiness and to the permanence of marriage, or more destructive to the feeling of equality that ought to pervade the married state, than for young girls to feel, in even a slight degree, that they are expected to marry as the only natural mode of providing for themselves. Rich fathers ought to regard it as a duty to give their daughters a feeling of perfect independence, and poor fathers ought to put their daughters in the way of supporting themselves by their own exertions. As a means to this last result, the friends of women will do well to concern themselves with opening the more lucrative professions to them, and with seeing to it that they obtain equal wages with men for equal work.

There is another moral. Every lawyer knows that while legal enactments are now very thoroughly reformed as regards the property-rights of women, women constantly themselves render them of no avail by giving their property entirely into the hands of their husbands upon marriage, through ignorance or inadvertence or politeness. This is very wrong conduct on their part. It is absolutely essential to the preservation of the dignity and the independence of women (the history of marriage in all ages shows it, if it could not have been deduced from theoretical considerations), that they should be on a par with men as regards property and education — the two things that have, in modern times, supplanted physical force as elements of power. Hence it is the duty of a woman, no matter how much confidence she may feel in the honor and integrity of the coming husband, to preserve her property-rights intact, as a not inessential element of a wider than personal morality.

CASATI IN CENTRAL AFRICA.

Ten Years in Equatoria and the Return with Emin Pasha. By Major Gaetano Casati. Translated from the original Italian manuscript by the Hon. Mrs. J. Randolph Clay, assisted by Mr. I. Walter Savage Landor. With upwards of 150 illustrations, colored plates, and four maps. 2 vols. F. Warne & Co. 1891. 8vo.

MAJOR CASATI owes his present distinction as an African traveller solely to his chance connection with Emin Pasha. He evidently possessed some excellent qualifications for a successful explorer—courage, tact, kindliness of disposition, and a ready faculty for adapting himself to native life, as well as some scientific training. But a natural indolence, increased by the enervating influence of a torrid climate, and to some extent a lack of means, apparently prevented him from accomplishing anything of importance. His travels being confined to regions already visited by other explorers, he adds little to our knowledge of Africa beyond names of streams, a few vocabularies, and accounts of trivial native wars. The descriptions of the customs of the natives even, which his ten years' life among them gave him abundant opportunities of observing carefully, are unfortunately not entirely trustworthy, since they were mostly written from memory, the greater part of his notes and papers having been destroyed. This fact necessarily detracts very much from the value and interest of his book, which is largely a confused and rambling mass of reminiscences, clumsily put together without proper regard for order or connection.

He went to Africa in 1880, at the invitation of his countryman, Gessi Pasha, to explore the Welle. This is an important stream which, rising in the mountains to the northwest of the Albert Nyanza, flows westerly through the Niam-Niam country—no one in 1880 knew whither; its discoverer, Dr. Schweinfurth, maintaining that it was a tributary of Lake Tchad, while others, including Mr. Stanley, held the theory, since proved to be true, that it was a branch of the Congo. Before proceeding to the river he passed a few weeks with Gessi, of whom he gives an interesting but too brief sketch. This unfortunate officer, probably the ablest of Gordon's lieutenants, had just put down the slave-hunters' revolt under Suleiman, son of the notorious Zebehr Pasha, and was about to return to Egypt. On his voyage down the Bahr-el-Ghazal he was caught in a succession of vegetable dams, the "sudd," and lost some five hundred of his companions, soldiers and prisoners, by starvation. The horrors of this three-months' imprisonment, from the effects of which he himself never recovered, dying before he reached Cairo, are but faintly indicated in the extracts which are given from his diary. Nearly four years were spent by Casati in wandering about that part of the Welle basin known to the readers of the 'Heart of Africa' as King Munza's dominions. But an attempt to solve the mystery of the river's course, by following it to its outlet, failed, and the outbreak of the Mahdist rebellion forced him at length to take refuge in the Equatorial Province.

It is an independent testimony to the accuracy of Stanley's and Jephson's portraiture of Emin Pasha that Casati's differs from theirs in no essential particular. In these pages he is the same upright, kindly man, devoted to science, warm-hearted but moody and irritable, clinging to the semblance of power though indifferent to its substance, self-confident but easily deceived, irresolute and vacillating in purpose, disinclined to accept advice, and blindly obstinate in adhering to his own judgment in preference to that of the men about him. The Italian traveller, however, does present the Pasha in a new and unexpected light in attributing to him a resolve which, if true, goes far towards explaining the strange reluctance of his soldiers to accompany him to Egypt. "On May 27, in the midst of general discouragement, Emin, anxious to find an anchor of safety and to save his prestige from total ruin, had uttered these imprudent words: 'We white men shall escape—I answer for it. We will give our black soldiers to my good friend Kabba-Rega, the King of Unyoro, and he will permit us to cross his boundaries.'" This came to the soldiers' ears, and it was impossible afterwards, according to Casati, to disabuse them of the conviction that they were to be sold as slaves when they left the province. His account of the events of the next succeeding years is confused and fragmentary, he himself remaining inactive until May, 1886, when he went to Unyoro to serve as Emin's representative with the King. His mission was to keep open communications with Uganda, and to obtain permission for the passage of the Egyptian garrison through the country on its way to the coast. In neither of these designs was he successful, and, after seventeen months of fruitless negotiations and patient waiting, he was driven out of the kingdom. The story of his adventures in Unyoro, his imprisonment, his imminent peril and fortunate escape, is told in a dull and lifeless way, but the description of the noted Kabba-Rega, his manner of life and the organization of his warriors, is interesting.

Casati gives no explanation of the mysterious and fatal delay of Emin in searching for the Relief Expedition, merely mentioning that he himself informed Emin of Stanley's arrival on January 16, and that it was February 25

when the steamer started for the place indicated, less than fifty miles from the station on the lake where Emin then was. Nor does he add anything of interest or importance to Mr. Jephson's account of the revolt of the Egyptians, the deposition and detention of the Pasha, and the invasion of the Mahdists. In all these stirring scenes he takes no active part, but poses as the faithful friend and sagacious counsellor whose advice, if it had been followed, would have warded off all disasters. He does, however, express very well the feelings with which Emin and his followers regarded Stanley's impoverished advance column. They "looked with wonder, eyes wide open, and dubious hearts, at this remnant of the Expedition, of which the Governor had sung so many praises, and which he had taught them to consider a fount of comfort. Of what value were thirty cases of Remington cartridges? They had not in the least changed the situation of the Equatorial Province." It is also unnecessary to dwell upon Casati's account of the march to the sea, in which he indulges in a good deal of rather querulous, though at times probably proper, criticism of Stanley's arbitrary ways. His characterization of this noted leader, however, is just as well as generous:

"Stanley is a man remarkable for strength of character, resolution, promptness of thought, and iron will. Jealous of his own authority, he does not tolerate exterior influences, nor ask advice. Difficulties do not deter him, disasters do not dismay him. With an extraordinary readiness of mind he improvises means and draws himself out of a difficulty; absolute and severe in the execution of his duty, he is not always prudent or free from hasty and erroneous judgments. Irresolution and hesitation irritate him disturbing his accustomed gravity; his countenance being usually serious. Reserved, laconic, and not very sociable, he does not awaken sympathy; but on closer acquaintance he is found very agreeable, from the frankness of his manner, his brilliant conversation, and his gentlemanly courtesy."

The brightest parts of Major Casati's book are the conversations, which are given with much vivacity. There are also many interesting references to native life and customs. The following, which he observed at the zeriba of a successor of Munza, resembles a custom which, according to Shakspere, once prevailed at the court of Denmark:

"It is with great pomp that the king commences smoking. The long pipe, which is always used new, is carefully prepared and lighted by a special officer. Bowing low, this functionary advances towards his sovereign, and, bending his right knee to the ground, presents the pipe to the king. Trumpets are sounded and drums beaten. The bystanders fill the air with *Azanga amombe! Azanga amombe!* while a cloud of smoke issues from the royal mouth and surrounds the august visage with an aureole."

Among the papers of our author which were destroyed was a collection of fables gathered from the different tribes with whom he lived. A few are given from memory, some of which show great similarity to those of other races. We cite the most interesting from the comparative point of view:

"A chameleon once challenged an elephant to a race. The latter accepted, and it was arranged for the next morning. During the night the chameleon placed some of its brothers at short distances along the road upon which the race was to take place. Next day at dawn, the elephant came up and commenced running, the chameleon quickly mounting upon his tail. At every meeting with a chameleon the elephant asked, 'Are you not tired yet?' 'No,' answered the animal which had been placed on the allotted track. At last the elephant stopped, tired and breathless, and declared himself conquered."

Our author has been unfortunate in his translators. Too many passages have been rendered into faulty English, and there is an evident unfamiliarity with the geography and literature of Central Africa. The work is attractively got up, and is profusely illustrated with portraits, reproductions of photographs of natives, and original sketches, often very sensational, of incidents in the author's narrative. No hint is given as to the source of the pictures of the natives, but that of King Azanga is a copy of Munza's portrait in the 'Heart of Africa.' The purely scientific part of Maj. Casati's work is represented in these volumes by some meteorological observations and some lists of words in seven different native languages or dialects.

Life of Wm. Tecumseh Sherman, late retired General, U. S. A. By W. Fletcher Johnson. Carefully reviewed, chapter by chapter, by Maj.-Gen. O. O. Howard, U. S. A. Philadelphia: Hubbard Bros. 12mo, pp. 607.

It was inevitable that the death of Gen. Sherman should seem a proper occasion to manufacturers of books to bring out new biographies of him. "Demand," in trade, means not only the public wish for a particular thing, but a general interest in a subject which may make anything "go off" which promises to gratify that interest. But Sherman's autobiography is so much more fascinating and so much more authentic than anything another person could write about him, that the would-be biographer finds decidedly hard lines. Not till Sherman's papers and correspondence shall be published and the official war records completed, will there be new material enough to make it really worth while to write a new Life.

The present effort in that direction is as palpable a case of a book made with scissors and paste as has ever been seen. Large extracts from the war correspondence of newspapers supply the thrilling battle descriptions, without correction of the blunders of fact and even the blunders in names which filled those vivid but notoriously inaccurate sketches. They were spicy condiments for the breakfast-table in 1862, but to reproduce them bodily to-day as history is comical. The authentic facts are necessarily copied or paraphrased from Sherman's own Memoirs, or reprinted from Gen. Howard's papers on the Atlanta campaign, already published. Every feature of the book shows haste. It has no index. Of the portraits there are two of Gen. Schofield, one of which (and the better likeness of him) is made to do duty for Gen. Butterfield. Typographical errors abound. In making up the forms, the matter of pages 440 and 441 has been bodily interchanged.

Gen. Howard furnishes a brief introduction, in which he really disclaims responsibility, saying, "The part undertaken by me, and to which I have strictly confined myself, has been to review the work, some of it already in proof type, and the remainder in manuscript, going over each chapter with considerable care, and suggesting such changes as I thought the truth of history demanded." He adds that the quotations (which are a very large part of the book) are, of course, not to be assumed as vouched for in fact or in opinion.

Switzerland. By Lina Hug and Richard Stead. [Story of the Nations Series.] G. P. Putnam's Sons. 1890. 8vo, pp. 430.

Switzerland has had a long and eventful history, and to condense its chronicles into a single volume in an interesting manner is not an easy task. Yet the authors of this book have succeeded well. The earlier part of the narrative is naturally more interesting than the later, for it contains the drama of the struggle for independence which, though familiar to the reader of history, has perennial attractions to the lover of freedom. But when this is over, Swiss politics declines gradually to a dead level of pettiness which continues almost unabated till the close of the eighteenth century. Brilliant events and startling situations are not essential to history, for institutions and civilization may be in quiet working out their problems in a manner quite as absorbing; but it would seem as if the history of the ten decades before 1798 gave the lie direct to that already doubtful proverb, "Happy is the people whose annals are uninteresting," for it was a period neither of political happiness nor of institutional growth. It would be difficult to make the story of it attractive. With the present century, however, begins a new era. The germs of modern constitutional liberty begin to expand, and, although kept back under the pressure of ancient prejudice and privilege, the advancement is certain. The contest for free speech and personal liberty; the gradual expansion of the State constitutions until they became too full of popular rights to be contained in the antiquated Confederation; the bursting of the chrysalis in the war of secession, and the founding of a strong Federal Government almost within this generation—all these are facts of interest to the general reader, as well as to the special student of institutions, and link the first century of the republic with its latest.

Six hundred years have passed since the Confederation first asserted its right to live. On the 21st of August, 1891, the anniversary of the signing of the first "Perpetual League" will be celebrated by the nation in Canton Schwyz, where the original compact took place, and where the original document is still preserved. Six centuries are a long time, but not long enough to wipe out many old Germanic traits which still exist in Swiss institutions. The political instincts of the nation are distinctly traceable even back to the time when the Alemannic hordes first settled in the country, and the history of the Confederation leads one into many interesting paths of study. No other country except England furnishes so much that is of interest to American history, and in no country, without exception, can American constitutional problems be seen so well in process of solution. The book before us will at least prepare one for more particular study of Switzerland's laws and institutions.

Gray Days and Gold. By William Winter. Macmillan. 1891.

Mr. Winter's graceful and meditative style in his English sketches has recommended his earlier volume upon (Shakspere's) England to many readers who will not need urging to make the acquaintance of this companion book, in which the traveller, in the unmistakable habit of a gray pilgrim, guides us through the quiet and romantic scenery of the mother-country with a mingled affection and sentiment of which we have had no example since Irving's day. The cheerfulness of his narrative is overcast by the fact that he is so often in a churchyard mood. Indeed, the book might fairly be described as an itinerary of the graves of the poets who do not rest in Westminster. It is naturally impossible for such a Shaksperian lover and devotee of

Stratford-on-Avon not to make the well-known church and its neighborhood the centre of his interest, and we have in consequence several added bits of description of Warwickshire and its memories; but there are besides sketches of the last resting-places of Moore, and Byron, and Gray, and many others whose title to remembrance is more humble. The short reports of the pilgrim's talks with sextons and graybeards are admirable in their simple truth, and give life to the mortuary atmosphere. From one of these elders we learn why Moore was well regarded by his rustic neighbors: "Yes, his name is widely remembered and honored here, but I think that many of the poor people hereabout, the farmers, admired him because they thought that he wrote 'Moore's Almanac.' They often used to say to him: 'Mister Moore, please tell us what the weather's going to be?'" The dealer in pictures at Nottingham explained why he did not have more photographs of Byron localities by saying: "Much more ought to be done here as to Lord Byron's memory, that is the truth; but the fact is, the first families of the county don't approve of him."

With a little of such anecdote and much romantic description of the regretful sort, Mr. Winter takes the reader through many of the memorable places in the literary past of England, into some cathedral towns, and over the country of Sir Walter, and he always praises the poet with warmth as he stands by his dust, and all that should not have been he buries in the oblivion of the grave with undiscriminating charity. It is altogether the pleasantest of books of the grave, and it concludes with a little peal of *in memoriam* poems quite in accord with the sentiment of his "gray days and gold."

Silva of North America. By Charles Sprague Sargent. Vol. II. Boston: Houghton, Mifflin & Co. 1891.

THIS second volume of Prof. Sargent's 'Silva' has been promptly issued and contains forty-seven plates, illustrating thirty-one species of trees belonging to the four natural orders *Cyrillaceæ*, *Celastraceæ*, *Rhamnaceæ*, and *Sapindaceæ*. The general interest of the work is well kept up, and Mr. Faxon's drawings here reproduced are not less accurate and elegant than his illustrations in the first volume. *Cyrillaceæ* is a small order, containing not over half-a-dozen species of shrubs or little trees, all natives of America. The two trees (*Cyrilla racemiflora* and *Cliftonia monophylla*) which are given a place in the 'Silva' are found from Carolina to the Gulf Coast, and one of them grows also in the West Indies and South America. They are both called iron-wood, and both have small entire leaves and slender racemes of little white flowers, which are very showy when seen in contrast with the dark-green foliage. The wood is heavy and hard, but seems to have no use except as fuel. The next order is well known through the climbing bittersweet or waxwork, a common shrubby climber of our Northern thickets, whose orange-colored berry-like pods and scarlet-cushioned seeds are very ornamental in autumnal days. This plant, not being a tree, has of course no place in the 'Silva,' but its cousin, the burning-bush (*Euonymus atropurpureus*), sometimes reaches arboreal dignity, and so is counted as a tree. Next come two little-known trees of Florida, of this same order; the wood of one of them has been used as a substitute for boxwood. *Rhamnaceæ* is represented by nine trees, all Southern or Western.

One may be pardoned for wishing that a botanist who is so painstaking and critical about his Latin names for trees, would have taken the trouble to coin also good English names for them. Turning to his excellent account of *Rhamnus Purshiana*, we find offered as vernacular appellations "bear-berry" and "coffee-tree." The first of these names belongs by the law of priority to the *Arctostaphylos Uva-ursi*, a low, trailing evergreen plant of Northern mountains, and the other name is primarily appropriated by the Arabian gift to civilization, and secondarily by a Kentucky tree (*Gymnocladus*) the seeds of which have been sometimes used as a substitute for coffee. Why not call this *Rhamnus* "Pursh's buckthorn," and in like manner name the other trees of our silva, instead of repeating such names as "iron-wood," "yellow-wood," "bear-berry," etc., in half-a-dozen different genera and orders? It is important to settle the scientific names of plants; it is also important, and to a far wider circle of readers, to settle the common names, and if, in the case of some plant, as one botanist has pleaded, "common people have never named it," then let some competent botanist give the plant a common name; just as some years ago Prof. Robinson so happily gave to the *Aspidium acrostichoides* the name of "Christmas-fern."

In the order *Sapindaceæ*, seventeen trees are described, and some of these are of great interest to unscientific readers, for this order includes the buckeyes and the maples—three buckeyes and nine maples. The Ohio or fetid buckeye (*Æsculus glabra*) differs from all our other native species of this genus in having roughened pods, which are even prickly when young. The sweet buckeye, so long known as *Æsculus flava*, is here called *Æsculus octandra*, the oldest name; though the writer admits that "the stamens are usually seven in number." It would have pleased many students if the red buckeye could also have been described, but probably the statement of Elliot, that it "sometimes becomes a small tree near the mountains," is not corroborated by recent observers. The Californian species, here called simply "buckeye," has much more showy flowers than the other American trees of this genus, but is far less common in cultivation. The horse-chestnut, though best known of all, is, of course, omitted, as it is not a native of this continent.

The maples are better distinguished by their common names than by the scientific designations which Prof. Sargent has seen fit to select; for the sugar-maple is no longer *Acer saccharinum*, but is *A. barbatum*, and the name *saccharinum* is transferred to the silver-maple, hitherto generally called *A. dasycarpum*. The reasons for this change are not given in this book, but may be found in the pages of *Garden and Forest*. Whatever they may be, the change is most unwelcome, and can please no one outside of a small company of name-changers with whom "priority" overrules all other considerations. It is more than a pity to see so splendid a work as this 'Silva' marred by such disfiguring nomenclature.

Achievements in Engineering during the Last Half Century. By L. F. Vernon-Harcourt. Charles Scribner's Sons. 1891.

THE title of this book is ambitious; its character popular rather than technical. It gives a brief readable account of a number of the principal engineering works of the last fifty years, the subjects considered being arbitrarily selected and relating for the most part to railroad construction or river and harbor improvements; the developments of steam and electric engineering are not considered. It is in no sense a technical work; it is simply a compilation of descriptive matter, all of which is superficial and much of which is inaccurate. Its popular character makes the inaccuracies less important than like inaccuracies have been in previous works by the same author, but it is a pity that any work emanating from an engineer should be so poorly prepared.

A few references will be at least amusing to people familiar with railroad matters. On pages 38 and 39 we read that "they [Swiss railroads] had to be so laid out as to be always open except in quite exceptionally severe weather," and that, "in America, the blocking of trains by snow in winter is a more common event." The American railroad manager may be glad to know that the stoppages due to snow are more common than "quite exceptionally severe weather." The description of American railroads is extremely loose. In one place we read that the Northern Pacific and Southern Pacific Railroads escape the crossing of the second ridge near the Pacific Ocean, and so avoid steep gradients on the western slope, and immediately thereafter that the tunnels on all these Western lines nowhere attain a mile in length. The western range, passing by different names, extends from Lower California into Alaska, the only low passage being that of the Columbia River, along which the Union Pacific line is laid, the construction of which was quite as difficult as that of the mountain lines. The longest maximum grade on the Southern Pacific Railroad is in descending from this range at the Tehachapi Pass, while the same range is crossed by the Northern Pacific Railroad at the Stampede Pass with a tunnel 9,800 feet long, this tunnel, as well as the San Fernando tunnel on the Southern Pacific, being considerably more than a mile in length.

On page 117 we read that two bridges were built across the Ohio River at Louisville in 1870, with spans of 368 feet and 396 feet respectively, both being of the Fink truss system, "with no continuous bottom flange." There are two spans of these lengths in the same bridge at Louisville, but both of these spans, though built by Mr. Fink, are of a pattern entirely unlike the Fink truss, and have bottom chords throughout. On page 128 we are told that the term cantilever is given to continuous girder bridges by American writers, and the Kentucky River bridge is mentioned in support of this statement, while the term cantilever is said to be "only suitable strictly to structures which increase in depth over the piers." The peculiar definition is an invention of the author. The Kentucky River bridge is a cantilever bridge and is not a continuous girder; cantilever arms project from each end of the central span, these projecting arms supporting the ends of independent spans which reach to the two abutments.

Other mistakes could be quoted; one will suffice. On page 268, we read that the Chignecto Ship Railway will carry vessels on two lines of rails eighteen feet apart; whereas this road will have four lines of rails and really consist of two standard-gauge railroads tied together by occasional long ties connecting the four rails.

Engineering is supposed to be an exact science; even in the attempts to popularize it it should be remembered that exactness and accuracy are the same thing. Books like this had better not be published.

Boston. By Henry Cabot Lodge. Longmans, Green & Co. 1891. 12mo, pp. 242.

It is difficult to imagine what section of the reading public is to be pleased by this book. The list of published volumes in the series of "Historic Towns" embraces London, Exeter, Bristol, Oxford, Colchester, the Cinque Ports, Carlisle, and Winchester, abroad; New York and Boston here. It must be that these American histories are intended for a British public to whom any information about American affairs will be welcome, whether germane to the title or not. This inference is unavoidable since Mr. Lodge has not written a history of Boston, but has thrown together a hasty sketch of the history of Massachusetts for the last 250 years.

A town history is naturally a history of a town: it may deal with natural history or not; it may embrace genealogies or not; but it must contain a record of the acts of the inhabitants both in their collective meetings and in their authorized official work. It must treat of the laying out of lots and roads, of churches and school-houses, of manufactures and business enterprises, of war records and local affairs, or it is not a town history. Judged by this evident and well-known standard, Mr. Lodge's book is not a history of Boston, and is not even an attempt at one. His book might stand with scarcely a word of change for a history of Salem or Worcester, had either town been the seat of the colonial government. A few extracts from Sewall's Diary, a page or two of Bennett's travels, and a chapter on modern Boston politics are all the local touches. Once, indeed, on p. 211, he states that "the literary genius of Massachusetts produced Jonathan Edwards's remarkable essay on the 'Freedom of the Will,' Franklin's 'Poor Richard,' and the rhymes of 'Mother Goose,' usually attributed to Thomas Fleet of Boston." This is his solitary tribute to Boston literature, and it is a fair specimen of his treatment of the history of Boston. Edwards, of course, had nothing to do with Boston. 'Poor Richard' was printed in Philadelphia, the only place entitled to claim Franklin as a citizen and worker; and as to the claim that Thomas Fleet *wrote* the rhymes of 'Mother Goose,' it appears for the first time in Mr. Lodge's pages. It is an extreme case of literary carelessness, for even the inventor of the idle fable that Fleet printed an edition of the rhymes, never imagined that he wrote them.

But we do not care to review this book in the light of a contribution to the histories of Massachusetts. It is, at best, such a sketch as a student might dash off from general recollections of a familiar subject, and consign to a foreign market where competition was limited. Boston has indeed been unfortunate in its historians. The subject is too vast and probably too unremunerative to attract the necessary labor. The preliminary sketch by Thomas Pemberton, printed in the Massachusetts Historical Society's Collections (1st series, vol. iii, p. 241–304), in 1794, and Shaw's History (Boston, 1817), were mere outlines. Then came Dr. Caleb Snow's History, printed in 1825, 424 pages, which was a wonderful piece of work for the times, and which is still the nearest approach to a proper history. Samuel G. Drake's ambitious attempt to enlarge and continue Snow's book is a fragment, of value only for some new materials. Like Mr. Lodge, he confounded the history of the town with that of the colony, and failed to do any satisfactory work. Dr. Shurtleff's book is a proof that even a single portion of the history of Boston requires great space, and Quincy's Municipal History is a mere chapter covering a few years. The pretentious and heterogeneous 'Memorial History' is a mere warehouse of materials, good, bad, and indifferent, saved from utter neglect chiefly by the quantity and admirable quality of its illustrations.

Thus it will be seen that the historian of Boston has yet to appear, probably has yet to be born. In the meantime, the necessary materials are being rapidly accumulated. The city of Boston has printed the records of the town-meetings and of the selectmen; its defective archives have been repaired by copies of church records; its wills and deeds are soon to be removed to new and convenient offices: and the files of Suffolk County have been arranged, bound, and indexed. In fact, for the history of Boston as a town from 1630 to 1822, the one thing lacking is an historian able to face the accumulation of facts and to reduce them to order and due proportion.

As to the history of the city, if a writer can be found devoid of political bias, the preparation of a good volume is not difficult. It is a task best suited to a stranger, because, as Mr. Lodge has pointed out, there are still at work feelings of class and race which involve nearly all of the native-born citizens. The history of Boston deserves to be written on a broad scale, and yet with sufficient minuteness in parts. Two portions, usually predominant in town-histories, can be safely omitted—the natural history, since the little peninsula has no striking features; and the genealogies, because the material is lost. Most of our early towns have the records of the inhabitants; Boston has hardly any for the entire eighteenth century. On the other hand, the political and social record is unusually large, interesting, and important. The church history is well preserved and will prove valuable, while the industrial record is very instructive.

In his concluding chapter Mr. Lodge touches on the question of the present inhabitants of foreign birth or parentage. He has not ventured to discuss the problems; and, as an active and aspiring politician, he is wise in maintaining silence. He ought, however, to have pointed out the fact, of which he cannot be ignorant, that if Boston is now so largely peopled by the Irish race, these children of alien parentage are a unit in devotion to the place of their own birth. The O's and the Mac's, whose tongues have learned in the public schools to drop the parental brogue, speak of "our city" and even of "our history" with as undoubting faith as if they had first drawn breath in Essex or Berkshire, or even in Vermont or New Hampshire. Another generation, a little abatement in religious zeal all around, and these Irish boys will be typical Yankees. They already despise "foreigners"; by 1950 they will be ready to prevent any further immigration. But this chapter is too recent to be written to-day, or apropos even of Mr. Lodge's diffuse essay.

A Manual of Public Health. By A. Wynter Blyth, M.R.C.S., L.S.A., etc. Macmillan & Co. 1890.

The sanitarian is like the hydrographer exploring a sea whose shoals he marks and whose submarine rocks he destroys, but in the midst of what was deep water at the last survey he now finds new volcanic peaks or freshly grown coral reefs. Cities, factories, applied chemistry, increased commerce by sea and land, all the conditions of the artificial life of dense populations, facilitate the destruction of disease-causes, but add a profusion of new ones. It is to the discussion of such problems that this book is devoted. The author of the work before us has English conditions and the English officer of health in his various capacities chiefly in mind, but what is desirable for English officials is acceptable, speaking generally, elsewhere. Sanitary science is as cosmopolitan as music; that of each country has its special characteristics, but the principles are common and universal.

The volume opens with an excellent essay upon vital statistics, containing a curious chapter upon artificial aids to calculation. That it is possible and convenient to extract the square root by machinery seems like a footfall of the Coming Race. Sanitation proper naturally begins with ventilation. By most persons the purity, or at least the innocuousness, of the breath of life is assumed as a matter of course, and the oppression that follows its contamination is referred to any but the true source. But the languor and headaches, the malaise and depression, that lead the ignorant to medicine, "domestic" and foreign, often depend upon self-poisoning whose antidote would be a broken window or an open fire-place. It is not from ignorance, but the author lays scarcely enough stress upon the nitrogenous waste from lungs and skin as the mischief-making element. The carbon dioxide indicates the danger, but is not, ordinarily, the real evil. It is the danger signal, not the dangerous thing. And the estimate (p. 64) that children require less than adults is misleading for working purposes, except as applied to the very young. As with the waste into the air, so with that into the ground and the water-courses. Ventilation and sewerage are complementary factors, the latter even more than the former noting the inroads, the special needs, and the progress of civilization. The rescue of the Thames from its degradation as a continuous cesspool is clearly illustrated by a map of London, showing the intercepting sewers that carry the sewage away from the higher levels. Sir Joseph Bazalgette, whose death has barely been announced, by those parallel lines not only saved the river, but broke up the excessive and almost ungovernable area into a group of manageable districts, making of an enormous unit a semi-independent federation. There are useful tables for calculating the flow of liquids, a fair recognition of the merits of the separate system, and a few pages upon sewage disposal. American sanitarians doubt that "the best material for soil-pipes is lead" (p. 286); it certainly is not when rats have access to it. And there is no mechanical difficulty in making perfect joints in heavy iron pipe. Careless plumbers may scamp their work, but poor work is no reason for abandoning good material. To carry the perpendicular soil-pipe outside of the house, while possible in the English climate, is not practicable in ours north of the Carolinas. Why may not much of the piping of the future be of glass, within movable wooden casing?

A couple of chapters on public nuisances, with the English laws in relation to them, are followed by a short section on disinfectants, discussing both their theoretical and practical aspects. As against the writer's definition of a disinfectant as "a chemical substance that by its poisonous action kills a disease-producing germ," we prefer that of the American Public Health Association, as "an agent capable of destroying the infecting power of infecting material." The section which appeals most visibly to the popular eye is that upon the "zymotic" diseases, which are now believed to be due to infecting micro-organisms. The general immunity from a second attack of eruptive fevers the writer explains by assum-

ing that the white cells, one of whose provinces seems to be to destroy such invaders, acquire additional power of resistance by the conflict. That is not as satisfactory as to suppose that the disease-germs leave in the tissues excreta unfavorable to the life of their kind. But neither hypothesis has been demonstrated. It is to be regretted that stress is not laid upon the wonderful persistence of the scarlatinal poison, whereby infected clothing, books, and toys will develop disease months and even years after being charged. Probably no disease is more to be dreaded, and none is more persistent in the life of its cause, than this red plague. The contagious nature of tuberculous disease is distinctly recognized, and the period is anticipated when it will be classed with diseases dangerous to the general health; for, as the author justly remarks (p. 485), "it is a far more important malady to have notified than such purely infantile complaints as measles."

Space does not permit reference to all the subjects in this excellent book, but we regret that in its relation to public health the abuse, if not the use, of alcohol is omitted; that the influence of arsenic, no longer confined in clothing and furniture to green dyes, is overlooked; that burial and cremation are not compared; and we should have expected to find some serious discussion of the repealed "Contagious Diseases Acts."

There are a dozen plates and diagrams, more than fifty other illustrations, and a good index. Exact references to pages in the footnotes are omitted unpleasantly many times, and there is an occasional uncertainty in proper names, as Farr and Farre (pp. 508 9), and Goldenberg (p. 421) may stand for Sternberg. The book is on a different plan and scale from ordinary Hygienes, and is very good.

The Oyster: A Popular Summary of a Scientific Study. By W. K. Brooks, Ph.D. Baltimore: The Johns Hopkins Press. 1891. 8vo, pp. x, 230. Ills.

THE condition of the oyster fisheries of Chesapeake Bay has been known to be precarious for fifteen years. The product has been, during that time, steadily decreasing in quantity and still more notably in quality. While other States, by confiding to private enterprise unoccupied bottom suitable for oyster culture, have put the business on a solid foundation, greatly enlarged the annual product, and given more or less lucrative employment to a constantly increasing number of their citizens, Maryland has seen her greatest source of wealth slowly but certainly subjected to a diminution which can only end, if her past policy be continued, in its complete destruction.

The population living on the shores adjacent to the fisheries has refused to permit any sort of private control of ground suitable for oyster culture; has defied all laws and regulations intended to protect the natural beds; has done everything in its power to obstruct scientific investigation of the condition of the beds; and, where individuals have reclaimed portions of the bottom, planted oysters, and seen, after years of waiting, the fruit of their labors almost ready for harvest, has robbed them of everything with absolute impunity. To most outsiders it would seem as if the best thing which could happen for the State of Maryland would be the complete exhaustion of the beds and the destruction of the business. This once accomplished, the ignorance and lawlessness now characteristic of the region could probably be overpowered by the public sentiment of the rest of the State, many of the marauders would be forced to emigrate to find a livelihood elsewhere, and a rational system might then be initiated. This, however, is a terribly high price to pay for what has been all along attainable by less radical methods.

In the hope of arousing a public sentiment which should take steps to remedy matters before it is too late, Prof. Brooks has prepared this little volume, which appears with a cordial introduction by President Gilman. It is admirably illustrated, and discusses the possibilities of oyster culture, the anatomy and development of the oyster, the artificial cultivation of oysters, the causes of the decline in the business, and the remedy. To be brief, the beds have been overfished, and the remedy is to authorize and protect private oyster culture. This is simple common sense, and has been the advice or, rather, the entreaty of everybody competent to judge for the last ten years. But people who will deliberately rob a neighbor of 300,000 bushels of oysters of his own raising after three years of labor bestowed upon them (see p. 203), are not likely to listen to common sense, or pay attention to anything short of a locust-wood club.

Much as it is to be wished, and fairly and sensibly as Prof. Brooks has written, it is almost certain that nothing will be done until the business has practically come to an end. Meanwhile North Carolina, Connecticut, Delaware, and even Georgia are making hay while the sun shines; even Virginia is moving in the right direction, and, when the catastrophe to Maryland comes, by a justice as rare as it is welcome, the chief offenders will be those to bear the well-merited loss.

Elizabeth of Roumania. By Blanche Roosevelt. London: Chapman & Hall.

"SAVE me from my friends!" must be the prayer of the Queen of Rumania if she be gifted with a tithe of the common sense and literary discrimination with which she is credited. If she be not, then Miss Roosevelt's skyrocket style is precisely adapted to the glorification of scribbling royalty. Each chapter of her laudation—it cannot be called criticism—goes up with a bang of ancestry, proceeds with a fizz of titles, and culminates in a shower of gushing (not fiery) adjectives, scattered with the utmost impartiality over Carmen Sylva's social position, personal charms, and literary efforts. One feels that Miss Roosevelt is very hard up when, despite her prefatory protestations that she is quite undazzled by the Queen's rank, the expression selected for special commendation for its characteristic originality is the hackneyed image contained in "The peasants bestrode their horses as if they were part of the animals themselves."

But skyrocket illumination is neither lasting nor satisfactory at the moment. Miss Roosevelt's "Study" informs us of nothing which previous biographers of the literary Queen have not told us, with the single exception of the all-important fact that the writer has met Her Majesty (sweet words), and has heard her read a play which may be presented some day in Vienna. Here, indeed, we lay our finger on the reason for the book's existence. On all other points Miss Roosevelt's information is derived from already existing accounts, which she copies so rashly that she makes "Frithiof" write "The Sagas of Tegner," instead of crediting Bishop Tegner with his famous 'Frithiof's Saga.' It would be interesting to know where, except on page 31 of this book, are to be found the "splendid gardens and promenades" attached to the palace of the Kremlin in Moscow.

Carmen Sylva is a fine woman, a talented woman, who has done some good work, as translations of two of her stories, "The Mother-In-Law" and "In Fetters," appended to this book, show. They also show, however, what Miss Roosevelt herself naïvely admits at one point, despite her desperate efforts to blink, and her asseverations that she has not moved an eyelash—that plain Elizabeth von Runkel would never have gathered sufficient laurel leaves to weave herself a wreath, had not a royal crown already rested on her head. Such strained overpraise as this volume contains is pretty sure to be counterbalanced by under-appreciation. The book contains two well-reproduced portraits of the Queen and a view of a room in her palace.

A Girl in the Karpathians. By M. M. Dowie. London: George Philip & Son. 1891.

FRESH, utterly unconventional, and wholly charming is Miss Dowie's account of her two months' ramble in Galicia. She makes no pretence to furnishing statistics of the country, although her map of the territorial dismemberment of Poland up to 1795 is highly instructive for people who are interested in that subject. What she does give is a very vivid picture of the country and of the people, with their picturesque costumes, graceful manners, quaint customs, and utter oblivion to morals in the Western sense of that word. She gives us a not too detailed journal of her summer experience, in which the reader soon discovers that Miss Dowie herself is by far the most interesting feature. She seems equally at home with the Ruthenians, the Poles, and the hybrid Huculs—less so with the Jews, whom she describes as enterprising, but dirty—and shares her cigarettes with all who will talk to her, as she absorbs their queer German and makes guesses at the other languages. Any one who inspects the dashing portrait of the writer, in her mountain suit of tweed coat and knickerbockers, flannel shirt and long leggings, will at once form an idea of the fascination of this canny young Scotchwoman. Her deeds are as dashing as her costume; and her style, replete with frankness about herself and others, is cast in the same mould. She is never at a loss for an adequate word or phrase. Her description of Polish may serve as an instance of her happy knack in putting things before one: "A Polish printed page is like nothing but a frogpond in spring—all tadpoles in various stages of development—some with, some without tails, and lots of queer, unknown, black, wiggly things that make one very nervous." Her mention of the postmaster who, having spoken nothing but Polish for forty years, determined to learn it, hired a teacher to give him a lesson every day—and abandoned the undertaking in despair at the end of six weeks—is equally good.

A book like this, however, one of whose great charms lies in its atmosphere, cannot be adequately represented by extracts, quotable as many of the phrases are. It must be read; and the reader will come to the conclusion that Miss Dowie may attempt other flights in literature with a more than usual certainty of immediate success.

LIFE OF

Jane Welsh Carlyle.

By Mrs. ALEXANDER IRELAND.

8vo, 330 pages. Portrait.

The publication of this book is a literary event. It is a remarkable biography of a wonderful woman, written and compiled from materials never before made public. The powerful side light it throws upon the life and character of Thomas Carlyle will make the volume indispensable to all who venerate the genius, or are interested in the personality, of the Sage of Chelsea.

International Copyright.

The Question of Copyright.

A SUMMARY OF THE COPYRIGHT LAWS AT PRESENT IN FORCE IN THE CHIEF COUNTRIES OF THE WORLD, TOGETHER WITH A REPORT OF THE LEGISLATION NOW PENDING IN GREAT BRITAIN. A SKETCH OF THE CONTEST IN THE UNITED STATES, 1837-1891, IN BEHALF OF INTERNATIONAL COPYRIGHT, AND CERTAIN PAPERS ON THE DEVELOPMENT OF THE CONCEPTION OF LITERARY PROPERTY AND ON THE PROBABLE EFFECTS OF THE NEW AMERICAN LAW. . .

COMPILED BY GEO. HAVEN PUTNAM
SECRETARY OF THE AMERICAN PUBLISHERS' COPYRIGHT LEAGUE

12MO., 430 PAGES, CLOTH . . . $1.50

A perfect arsenal of facts and arguments, carefully elaborated and very effectively presented. . . . Altogether it constitutes an extremely valuable history of the development of a very intricate right of property, and it is as interesting as it is valuable.—*New York Nation.*

The volume contains much useful information, and is a decidedly valuable contribution to the literature of Copyright. It should prove of great service in leading to a better appreciation of the subject on both sides of the Atlantic.—*London Athenæum.*

Mr. Putnam is admirably qualified by his close attention for many years to the subject of Copyright, to prepare a compilation of this kind, and his volume will be found most important as a work of reference, embodying as it does much useful information on a topic to which the American nation, for the first time, has given serious attention during the last two years.—*Minneapolis Journal.*

A work of exceptional value for authors and booksellers, and for all interested in the history and status of literary property.—*Christian Register.*

T. Y. Crowell & Co.'s

New Edition of the Complete Works

OF

Charles Dickens.

In 15 and 30 Volumes.

It is a well-known fact that for some years it has been impossible to find a set of Dickens in 15 volumes that met the wants of those desiring his works in good clear type, well printed on fine paper, handsomely illustrated, tastefully bound, and suitable for library use, at a moderate price.

The existing demand and need of the public for such an edition has been fully met in the one we have now ready.

It is also equally true that there is not a 30-volume set of Dickens published in this country or England that meets all these requirements so completely as our 30-volume edition. We beg leave to call attention more fully to some of the

POINTS OF EXCELLENCE.

The Electrotype Plates have been cast from new large-faced type, well leaded, easy to read, and great care has been used in the proof-reading to preserve accuracy in the text.

The Paper has been carefully selected, and is of suitable weight for volumes of convenient size and thickness. That used in the 15-volume edition is a high grade of opaque, machine-finish, while the 30 volumes are printed on calendered paper, natural color, especially adapted for a fine edition.

The Illustrations have been faithfully reproduced by GEO. T. ANDREW & CO. at great expense, and comprise all the original ones by PHIZ, CRUIKSHANK, and others. To these have been added 65 new cuts from etchings by PAILTHORPE, contained in no other edition, and a fine steel Portrait of Dickens, making in all 799 full-page illustrations in the 30 volumes and 240 in the 15 volumes. No other 12mo edition contains so many illustrations as our 30-volume edition.

The Presswork has been executed in the most careful manner by BERWICK & SMITH of Boston, whose reputation for fine artistic printing is well sustained in the clear and sharp impressions of both text and illustrations.

The Bindings have been selected with the view of obtaining the most tasteful cover designs and harmony in colors.

The Result as a piece of bookmaking is highly satisfactory, furnishing a series of volumes creditable to the publishers and a pleasure to every purchaser.

Volumes sold separately. This edition being sold in sets or in separate volumes, the advantage of this arrangement will be appreciated by those who find it more convenient to purchase one or two volumes at a time.

PRICES.

30-VOLUME EDITION. With all the original Illustrations by Phiz, Cruikshank, etc., and many later ones to which have been added 65 new cuts from etchings by Pailthorpe, contained in no other edition, and a steel portrait, making in all 799 full-page Illustrations. Printed on fine calendered paper, large 12mo.

G. P. Putnam's Sons,

27 and 29 West 23d St., New York,

HAVE NOW READY:

The Story of Portugal. By H. MORSE STEPHENS (No. XXXII in the Story of the Nations Series). 12mo, fully illustrated, cloth, $1.50; half leather, gilt top, $1.75.

Church and Creed. By R. HEBER NEWTON (Rector of All Souls' Church, New York). I. Fold or Flock? II. The Nicene Creed; III. How to Read a Creed. Pp. xx+212, cloth, 75 cents; paper, 40 cents.

To these sermons, the first of which was preached the Sunday after the remonstrance against the alleged uncanonical practices of the Rev. W. S. Rainsford and Mr. Newton, have been added supplementary explanatory notes, defining more clearly the author's views.

A POCKET VOLUME OF TALES

The Adventures of Three Worthies. By CLINTON ROSS, author of 'The Gallery of a Random Collector.'

Being an Adventure of a French gentleman in '70; one of a nobleman of old Touraine, turned Jesuit; one of a certain follower of the Stuarts, told by themselves.

Of 'The Gallery of a Random Collector' the following has been said:

"Once in a while a volume of clearly told short stories comes along . . . after the order of the 'Tales from Blackwood,' the model compilation of its kind, wherein interest and humor and good common sense unite more for amusement than instruction."—*Toledo Blade.*

"An Alcove of Water Colors of 'First Proofs.'" "Fresh, refined, illustrative. Sketches from the memoirs or the memories of a keen observer whose mind is stored with *curiosa*, and who points us to them with the delicacy of a connoisseur, knowing, but not eulogizing his good things overmuch."—*The Critic.*

BY THE SAME AUTHOR.

The Speculator: A Portrait of a Contemporary American. 16mo, cloth, 75 cents.

Extracts from Reviews.

"This is a bit of real life, put in the tersest, tensest form imaginable, and leaves the reader all unsatisfied."—*Literary World, London, Eng.*

"A trashy little story."—*The Critic.*

"Too much cannot be said of the clearness of the author's conception and his skill in the management of detail."—*The Epoch.*

"Portrays powerfully the adventurer in finance, who having won success by capability and daring, loses it by a false move, and is made weak."—*Boston Globe.*

"His (the author's) manner is good, and hence his failure is all the more deplorable."—*Once a Week.*

"A simple, keen, direct thrust, flashing and keen as that of a rapier, at the business habits of our modern life."—*Chicago Times.*

"The chapters descriptive of the man's struggle to retain command of those forces that had ruled his world are full of careful work."—*Springfield Republican.*

*** List of Fall Announcements and Prospectus of the Story of the Nations Series sent on application.

BOOKS OF THE WEEK 76

TERMS OF SUBSCRIPTION.

Three Dollars per year, in advance, postpaid to any part of the United States or Canada; to foreign countries comprised in the Postal Union, Four Dollars.

The date when the subscription expires is on the Address-Label of each paper, the change of which to a subsequent date becomes a receipt for remittance. No other receipt is sent unless requested.

The paper is stopped at expiration of the subscription, unless previously renewed.

Remittances at the risk of the subscriber, unless made by registered letter or by check, express order, or postal order, payable to "Publisher of the NATION."

When a change of address is desired, both the old and new addresses should be given.

Address THE NATION, Box 794, New York.
Publication Office, 208 Broadway.

TERMS OF ADVERTISING.

Fifteen cents per agate line, each insertion. 14 lines to the inch.

Twenty per cent. advance for choice of page, top of column, or cuts. Cuts are inserted on inside pages only.

A column $20 each insertion; with choice of page, $24.

A page, $60 each insertion; front cover page, $80.

Advertisements must be acceptable in every respect.

Copy received until Tuesday, 5 P. M.

Catalogue gives full particulars as to entrance examinations. Correspondence invited. Lock Box 204. SARAH F. ANDERSON, Principal.

Hellmuth Education Health Home **College** For YOUNG WOMEN and GIRLS.

Large illustrated Catalogue sent on application. Students from all parts of America. Number received limited. Conducted parties leave New York, Cincinnati, Chicago, and other points for the College in Sept. Rev. E. N. ENGLISH, M. A., Principal. LONDON, ONTARIO, CANADA.

ROANOKE COLLEGE,

SALEM, VA. 39th Year.

Choice of Courses; Commercial Department; Library, 17,000 volumes; working laboratory; good morals; healthful mountain climate. Expenses for 9 months, $154 to $204 (board, fees, etc.). Young men from many States, Indian Territory, Mexico, and Japan. Illustrated catalogue and illustrated book about Salem free. Address JULIUS D. DREHER, President.

THE CLAVERACK COLLEGE

And HUDSON RIVER INSTITUTE

For Boys and Girls, will open its 38th year Sept. 14. For catalogues, address Rev. A. H. FLACK, A.M., Prest., Claverack, N. Y.

HATCHARDS.

This is the favorite BOOKSTORE, and for 100 years the resort of the smartest people in London. It is visited and patronized by all who love books. London is the great market for books, and all the best as well as the cheapest editions can be had by writing to us. Special collections formed, and fuller information supplied than from any other house. Books both old and new, and relating to any subject, can readily be supplied at very moderate prices.

Agents for Clubs, Libraries, and all private Collectors.

187 PICCADILLY, LONDON W.

Wilson College for Young Women,

CHAMBERSBURG, PA.

$250 per year for board, room, and all college studies, except music and art. Large Music College and Art School; full Faculty; College Course B.A.; Music College B.M. Handsome park, large buildings, steam heat, gymnasium, observatory, laboratary, etc. Rev. J. EDGAR, Ph.D., President.

VIRGINIA MILITARY INSTITUTE,

LEXINGTON, VA.

53d Year. State, Military, Scientific, and Technical School. Thorough Courses in general and applied Chemistry, and in Engineering. Confers degree of graduate in Academic Course, also degrees of Bachelor of Science and Civil Engineer in Technical Courses. All expenses, including clothing and incidentals, provided at the rate of $36.50 per month, as an *average* for the four years, *exclusive of outfit.* Gen. SCOTT SHIPP, Superintendent.

DICKINSON SEMINARY,

WILLIAMSPORT, PA.

A thoroughly equipped Classical and Scientific School for both sexes. Fifteen teachers. Regular and elective courses. Degrees conferred. Rare facilities in Music, Art, and Modern Languages. Steam heat; electric light; all modern appliances. $225.40 pays all charges in a regular course for one year. Discounts to preachers, teachers, and two from same family. Year begins September 1. Catalogue free. E. J. GRAY, D.D., President.

LINDEN HALL SEMINARY,

LITITZ, LANCASTER CO., PA.

For Young Ladies. 98th year. A safe, comfortable school-home. Aims to be thorough, rational, and Christian in its methods and training. Careful oversight of individual pupil. Location healthy and pleasant.

Vanderbilt University.

Ten Fellowships, $100 each, with free tuition, open to graduates wishing to pursue higher courses.

Address WILS WILLIAMS, Sec'y, Nashville, Tenn.

WELLS COLLEGE FOR WOMEN, AURORA, N. Y.

Three Full Courses of Study. Location beautiful and healthful. A refined Christian Home. New Building with Modern Improvements. Session begins September 16, 1891. Send for Catalogue. E. S. FRISBEE, D.D., President.

UNIVERSITY OF VIRGINIA.

Session begins Oct. 1. Extensive courses of instruction and ample equipment in *Letters* and *Science*, *Law*, *Medicine* and *Pharmacy*, and *Civil*, *Mining*, and *Mechanical Engineering*. Apply for Catalogue to WM. M. THORNTON, Chairman, Univ. of Va., Charlottesville, Va.

THE OHIO UNIVERSITY

AT ATHENS does college work exclusively. Electives in Biology, Electricity, Elocution, Greek, Latin, etc. Special course in Pedagogy leading to degree. Tuition $30 per year. First class graduated in 1815. CHAS. W. SUPER, President.

COLLEGE OF PHYSICIANS AND SURGEONS,

BALTIMORE, MD.

Send for a Catalogue to THOMAS OPIE, M.D., Dean, Cor. Calvert and Saratoga Streets.

Lake Erie Seminary, *Painesville, O.* —Buildings enlarged; increased opportunities for the liberal and thorough education of young women. Thirty-third year begins September 16, 1891. MISS MARY EVANS, PRINCIPAL.

RIVERVIEW ACADEMY, POUGHKEEPSIE, N. Y.

56TH YEAR. Prepares thoroughly for College, the Government, Academies, and Business. Military Organization. BISBEE & AMEN, Principals.

The Nation.

NEW YORK, THURSDAY, JULY 23, 1891.

The Week.

THE gratifying intelligence is communicated from Washington that in the last fiscal year the sum of sixty cents was earned by American ships in carrying United States mails to Europe. Foreign ships received for this service about $400,000 during the same period. With a view to stimulating this peculiarly rickety infant industry, the last Congress provided for a system of bounties to be paid to vessels of American construction for carrying our mails to foreign countries, and the Postmaster-General now publishes an elaborate advertisement defining the routes to be followed by these vessels. As the Republicans have squandered all the surplus in the Treasury, and as there is little prospect that there will be any excess of revenue for some time to come, it might seem unwise to undertake at present the payment of any more bounties than we are absolutely committed to. But we venture to say that apprehensions of this nature may be allayed, for not even Mr. Wanamaker's advertisements, made more tempting by a promise of bounties—a prize-gift, so to speak, with every package of mail taken—can presently create an American merchant marine, "with an aggregate tonnage of 154,000 tons, and at a probable cost of from $27,000,000 to $30,000,000."

At the time when the sugar bounty was under discussion, the Internal Revenue Bureau prepared estimates of the amount that the Government would be obliged to pay if the bounty went into effect. These estimates were based upon the existing production, and indicated that the bounty earned would be about $9,231,000. By the conditions of the law, every person intending to claim the bounty must make application by the 1st of July to the Commissioner of Internal Revenue for a license, which application shall state the amount of sugar he proposes to make during the ensuing year. These applications have now been received, and the result, as shown in a despatch to the New York *World*, is rather startling—or would be if the waste of a few millions by the Government produced any effect on the public mind. The Government's estimate of the cane-sugar product was 420,000,000 pounds. The applications from Louisiana alone show an anticipated production of 551,000,000. The applications relating to beet sugar show an expected product of twice the amount estimated by the Government. If these anticipations are realized, the Government will have to pay about $3,300,000 more in bounties than it counted upon. It is to be hoped that the applicants for bounties are too sanguine in their expectations.

It seems that the Republic of Venezuela is not attracted by the advantages of reciprocity as presented in Mr. Blaine's treaty. A despatch to the *World* states that the President of the Republic laid the matter before the Congress for its advice, and the answer of the Congress is to the effect that Venezuela would suffer a great loss of revenue without any compensating gains. The answer declares that the Blaine project has, besides an element of novelty, a tendency to harmonize great economic interests, and that it displays the result of vigorous thought developed by a notable statesman. But it is not exactly the thing for Venezuela, for that country would be compelled, if the treaty were accepted, to make up elsewhere nearly 33 per cent. of her customs revenue. Moreover, the abolition of duties upon the products of the United States would render the importation of like products from Europe unprofitable, and thereby further diminish the revenue from import duties. On the other hand, the exemption from duty of the agricultural products of Venezuela when imported into the United States could not be expected to cause any compensating rise in their prices. The Congress recognizes the advantages to consumers of reduced customs duties, and declares that such reduction should be the policy of every just and liberal government, but it points out that the necessity of obtaining revenue is at present paramount. All that the United States was able to offer Venezuela as an inducement to enter into the treaty was a continuation of the free import of coffee, and the exemption from duty of goatskins, honey, and certain kinds of sugar. This was coupled with the threat that if the treaty were refused, a duty of three cents a pound on coffee and one and one-half cents a pound upon hides imported into the United States from Venezuela might be imposed. On the other hand, the Venezuelans were to abolish the duties upon wheat and flour, corn and all its products, cereals, hay and oats, pork, lard, butter, cheese, cotton-seed oil, macaroni, coal, wood, tar, pitch, and turpentine, and machinery, including agricultural implements and mining and industrial utensils. Among products upon which duties were to be reduced one-fourth were manufactures of cotton, of iron and steel, of leather, of wood, and of rubber. It must be admitted that the bargain does not look very tempting from the Venezuelan point of view. The answer of the Congress is a document evidently prepared by very competent hands.

The French Chamber has voted to rescind the prohibition against American pork, and impose instead a duty of 20 francs per 100 kilos (or $4 per 220 pounds). This duty of about 40 per cent. ad valorem ought to be satisfactory to the McKinleyites, being considerably less than our duty on French silks, besides interposing fewer obstacles of an administrative sort. It would have been quite in accordance with *our* methods if the French Chamber had added to the specific duty a small ad-valorem duty also, and then passed a customs administrative bill requiring the butcher and the breeder of American swine to prove the cost of production of their pork. But, although the French are pretty well up in the science of protection, they have some things yet to learn. Whether they have yet learned that the American farmer will pay the duty on pork imported into France from this country and thus contribute to the support of the French armed and naval forces, is uncertain, but they can learn something of that kind by examining the speeches made in Congress in favor of the McKinley Bill. If we are to pay the duty as well as supply the pork, the bargain will be a hard one for us, and yet we fancy that a great many good protectionists will hail the repeal of the prohibitory decree as a great victory and boon. Such persons probably think that foreigners pay the duties that we levy on their goods and also those that they levy on our goods.

The McKinley duties were put on corduroys in order to oblige a firm of manufacturers in Rhode Island who had never made any corduroy, but who were confident of their ability to do so if a high enough duty were put upon the foreign product. Senator Aldrich had the duties increased to 80 and even 85 per cent. on the lower grades, which are used for clothing by poor people, raising the price from thirty to forty cents a yard, while the price of the high grades, which are used only by well-to-do people, was advanced only about three cents a yard. The result has been to force the poor people who formerly bought these goods for their clothing, to either pay a third more for it or buy some cheaper and less durable material. Like the tin iniquity, this duty was put upon an article not a particle of which is manufactured in America, or can be manufactured here without the importation of foreign skilled labor. A reporter tried to get from the agent of the Rhode Island firm who had this tax put on to enable them to give birth to an infant industry, a list of samples with prices, but he only succeeded in getting sight of a small piece of corduroy inferior in weight and quality to the foreign product. This sample, like those of the various American tin works, was only for exhibition purposes. No goods are for sale, or likely to be for a long time to come.

The *New Yorker Handels-Zeitung* publishes an interview with Secretary Foster on the subject of the Gold Movement, the condition of the Treasury, and kindred topics. Mr. Foster thinks that we sent abroad seventy million dollars in gold because we owed the money. He thinks that some of this gold will come back to us when the breadstuffs movement becomes active, but

not all of it. He thinks there will be a large demand for money then. This was one of the reasons why he decided to extend the 4½ per cent. bonds instead of paying them. He believes that this operation will add about $25,000,000 to the circulating medium. Another reason for extending the bonds instead of paying them was that "the expenditures are growing and the receipts in the Treasury are becoming smaller." This is the first admission we have seen in print, from any Treasury official, of a fact which the business community has considered an inevitable result of the pension and tariff legislation of the last Congress. The Secretary says that he should like to convert the 4 per cent. bonds also into 2 per cents having a longer time to run, but he does not think that the next House of Representatives will agree to that. That House, he thinks, will pass a free-coinage-of-silver bill, and that he is strongly opposed to.

There are signs of a disposition on the part of the Republican leaders to oust Mr. Quay from the Chairmanship of the National Executive Committee. They begin to talk of the difficulty they have had for some time in persuading him not to resign, and to intimate that after a long struggle Mr. Quay is getting the better of them. Mr. J. S. Clarkson now confesses that immediately after the election Mr. Quay began to talk in this way, claiming that the detail work of a political committee was not a proper employment for a United States Senator. The rest of the Committee unanimously opposed this contention, and by dwelling upon the absolutely harmonious relations that had prevailed among them, "the members becoming endeared to each other thereby," temporarily overcame Mr. Quay's determination. But he is a man of iron will. When he starts for a goal, he generally gets there, and he has fairly tired his colleagues into letting him depart. From all this it appears probable that Mr. Quay is to withdraw and Mr. Clarkson to take his place. The people are to understand, however, that Mr. Quay's career has had nothing to do with this change, and that the Republican party declines to take any credit to itself for deposing a disreputable leader. If he would only have remained, they say, they would have been only too glad to have him.

It looks very much as if ex-Judge Harrison would be "read out of the party" in Connecticut for revealing the facts about the Republican plot, led by the editor of the Hartford *Evening Post*, to steal three of the State offices from the Democrats. He is denounced daily in the Hartford organ as having "made an attack upon the Republican party," and that view is taken of him by nearly or quite all the party organs in the State. He is thus shown to be "no better than a Mugwump" or an "assistant-Democrat," and the party has no further use for him. Are his charges true? Oh, yes, but that makes his offence all the more unpardonable. He should have stayed in the party, kept quiet about its rascalities, and endeavored to "reform it from the inside." That is the only course for a loyal Republican to follow. As Quay says of Bardsley's theft of $2,000,000 of the public money, "he stole it as Bardsley, not as a Republican," and the Philadelphia newspapers all exclaim in chorus, "That is the point precisely." The editor of the Hartford *Evening Post* was trying to steal three State offices for his party, but he was trying to "steal as Porter, not as a Republican," and Judge Harrison should have either kept quiet about it or spoken of it only in that way.

The experts who have been examining the accounts of Bardsley, the thieving Philadelphia Treasurer, have made an elaborate report which shows that he misappropriated over $778,000 of public money, and that he sunk over $1,121,000 more in the Keystone Bank, making a total loss to the city and State through his rascality of nearly $2,000,000. He used over one million dollars in stock speculations, and it is interesting to note that Kemble, of "addition, division, and silence" fame, was one of his partners in these operations. The stubs of his check-books show that he used the public money as freely as if it were his own. Republican State officials were in great luck in enjoying his liberality with this money. One stub is marked: "To the order of myself for Wm. Livsey, State Treasurer, for his kindness to me during the year, $500." The Auditor-General of the State, Thomas McCamant, and one of his clerks, H. N. Graffin, were sharers with Bardsley in the rebates which he obtained from the Philadelphia newspapers on the public advertising. His accounts show that he obtained 40 per cent. commission on this advertising from four newspapers, amounting in one year, 1889, to $16,289, and that he put $7,144 of this into his own pocket, gave $7,144 of it to the Auditor-General, and $2,000 of it to Graffin. In 1890 he seems to have taken the entire commissions for himself, for he deposited over $17,000 to his own credit as "newspaper balance." In 1891 he deposited over $8,000 in the same way. One curious entry shows that he paid $1,000 to a newspaper, the *Item*, "in place of getting" the public advertising—that is to say, he took $1,000 of the public money and presented it as a "consolation prize" to an editor who had been disappointed in getting any of the advertising.

One of the newspapers which paid the 40 per cent. commission was the *Press*, that stalwart defender of Wanamaker and Quay and all the other Republican leaders who are not in jail or on the way there. The *Press* explains, in a truly Wanamakerish manner, as follows:

> "The *Press* paid no rebate on its city or State advertising. H. N. Graffin brought the Mercantile Appraisers' advertising to the *Press* and offered it at a rate which would pay the paper to print it after paying the commission which he demanded, of 40 per cent. It was a large volume of advertising, offered under conditions which permitted its publication without interfering with the general news or ordinary advertising of the paper. It could be obtained on no other terms except by paying the commission demanded; and, while the *Press* considered the rate exorbitant, it preferred to pay it rather than lose the business. The *Press* received from Mr. Bardsley a check for the full amount which the city paid for the Mercantile Appraisers' advertisement, and then gave H. N. Graffin his commission for bringing in the business."

It seems never to have occurred to the *Press* to ask how it happened that Graffin was able to dictate such exorbitant terms, or what the "pull" was which gave him control of so profitable a job. It says now that Graffin "collected not only for himself but for his superiors," that "Messrs. McCamant and Bardsley took advantage of their power to grossly abuse it," that the city is paying for its advertisements "more than they are worth," and that "the whole system of official advertising is conducted on a vicious principle." The *Press* is evidently as grieved at being caught in company with a lot of public thieves as good Mr. Wanamaker himself is.

In a surprisingly weak defence of Mr. Wanamaker's relations with the Keystone Bank and its rascals, the *Independent* makes this statement concerning that memorable incident in Washington, the night before the bank was closed, when Marsh made a final attempt to induce Wanamaker to give up his fraudulent stock:

> "Afterwards, when there was a thought of reorganizing the bank, Marsh and two other gentlemen, including the attorney of the Lucas estate, visited him [Wanamaker] in Washington to see if he were willing to surrender his stock for this purpose. He says he refused unless he were paid for it. Was this wrong? He held it as collateral, and it represented a large sum of money he had advanced; was it strange that he should want to get part of the money back, if possible?"

This is not in accordance with Mr. Wanamaker's account of the interview. He did not say that "he refused unless he were paid for it." Here is what he said, quoted verbatim from the Philadelphia *Ledger's* report of his testimony:

> "I said to those gentlemen that up to that time no person but Mr. Marsh had called the stock in question, but that now that the Vice-President of the bank and the attorney of the Lucas estate had done so, I felt obliged to say that they must either settle with me, or I could not in justice to myself allow the Comptroller of the Currency to be ignorant of the fact that they were claiming that some of the stock that I held was improper stock."

The *Independent* will see that demanding money for the stock, under a threat, in case of refusal, to give the Comptroller information which would lead to the closing of the bank, was a very different proceeding from a mere refusal to surrender it unless he were paid for it. It will see, also, that the good man was demanding money, something like $50,000, for stock which three good authorities had assured him was fraudulent. We put it to the *Independent* to answer its own question in regard to this ex-

traordinary conduct on the part of a Sunday-school instructor and public moralist: "Was it wrong?"

The *Christian Union* is even more cautious than the *Independent* in commenting upon Mr. Wanamaker's case. It says:

"We do not think it our duty to anticipate the further investigations which should be made, alike in the interest of the public and of Mr. Wanamaker, and which it must be presumed both the proper officials of the State of Pennsylvania and Mr. Wanamaker will demand. It must suffice to remind our readers that if, on the one hand, high position and even Christian reputation do not suffice to make unnecessary official investigation into such definite charges as have been preferred by Mr. Bardsley against Mr. Wanamaker, on the other hand there are always men and presses in the community ready to assume that one who occupies such a position and possesses such a reputation is to be presumed guilty until he is proved innocent. The reverse is certainly the case. The presumptions are all against the truth of charges so preferred, and the public, as well as the courts, should presume innocence unless guilt is established."

This is a distinct intimation to Mr. Wanamaker that he needs to demand further inquiry in order to establish his innocence, the *Christian Union* not taking the view of the Wanamakered press in Philadelphia that his last statement was a "clear, comprehensive, and conclusive refutation of all the intimations and innuendos that have been made against him." The *Christian Union* is surely not unmindful of the fact that the same "Christian reputation" which serves as a shield for a good man against charges of unworthy conduct, also demands from him great circumspection in his daily walk and conversation. It is because Mr. Wanamaker makes such loud professions of "Christian reputation" that he is held to so strict accountability for his acts. If it be a censurable proceeding for a carnal and worldly man to demand $50,000 for a block of fraudulent bank stock as his price for keeping quiet about it, is it not more censurable for a man of "Christian reputation" to demand it? And ought not his Christian brethren to rebuke him sternly for his conduct, rather than to seek to hide it under the mantle of his "Christian reputation"?

The Farmers' Alliance set out to capture the Democratic party in Mississippi and commit it to their sub-treasury scheme, but the Democratic leaders, with Senator George at their head, fought them from the start with the utmost vigor. It is already clear that the people are on the side of George, the opponents of the sub-treasury scheme constituting four-fifths of the recent Democratic State Convention, and enough Democratic county conventions have been held to show that both George and his colleague Walthall (if he will withdraw his refusal to be a candidate) will be reëlected to the Senate by the Legislature, which will have the disposal of both Senatorships, as no State election will be held after next November until 1895. The result of the registration for the coming election, by the way, shows that the whites constitute a large majority of the voters on the rolls, but few negroes having made any effort to pass the educational test.

An extraordinary spectacle is now to be witnessed at the office of the Register of Deeds in Brooklyn. That office closes its doors at four o'clock every afternoon, except Saturday, when they are closed at twelve, and at those hours the public must withdraw. Without the doors, however, stands a small army of clerks, apparently a hundred or more in number, equipped with small yellow books and writing materials. To these clerks the doors are again opened, they enter and fill all the desks of the immense Hall of Records, and work there steadily until ten o'clock at night. The superficial explanation of this phenomenon is, that this army consists of clerks employed by the Lawyers' Title Insurance Company to transcribe records, and that that company has made it an object to the Register to allow its employees special facilities. The ultimate explanation is, that the State has so utterly failed to manage the delicate and responsible work of maintaining a system of recorded titles that private enterprise has been compelled to step in and practically take the work off its hands by introducing more scientific methods. For many years it has been the deliberate policy of the officers having charge of the real-estate records to perpetuate an obsolete system of indexing for the purpose of swelling their own fees. In the cities of New York and Brooklyn this policy has only been met by giving their officers salaries and allowing them to satisfy the requirements of their positions by overcharging for disbursements and by the employment of superfluous underlings. Provided these things are secured to them, the records may take care of themselves, and if anything is to be made by allowing copyists special facilities, it is so much clear gain. The labor of transcribing all the records in New York and Kings Counties is something prodigious. The deeds alone must number more than a million, and the transcription of five deeds in an hour would probably be all that could be accomplished with proper regard to accuracy. Vast as the labor is, it has become so necessary that there will shortly be three complete sets of records of deeds and mortgages in Kings and New York Counties—one antiquated, cumbrous, badly indexed, but official, the others compact, convenient, and perfect as intelligence and money can make them, but having no official character. In the face of this showing, the plan of the philosophers who call themselves Nationalists to make conveyancing a Government monopoly would not seem to be justified by experience.

The English Labor Commission is bringing out some very edifying testimony from the representatives of the unions of workingmen. Some of them perplex the believers in improving mankind by Government inspection by testifying that most of the Government inspectors of factories are inefficient. Others discomfit the philosophers who hold that the conditions of the employment of laborers by capitalists are fundamentally wrong and unjust, by testifying that the Employers' Liability Act has had the effect of increasing the number of accidents, while the employers' insurance companies have made it hard for the men to get any damages. The advocates of compulsory temperance are pained by being told that the act prohibiting the payment of wages in public-houses is practically a dead letter. It might seem that the collapse of so many socialistic experiments at the outset would operate to discourage the believers in state regulation, but the testimony of these witnesses is overwhelming that the trouble is that the measures do not go far enough. What is wanted is that the State should maintain workshops where all the unemployed should find employment, or at least wages. Thus the trade unions would take care of their own members, their employers being unable to hire non-union men, and the State would take care of all whom the unions did not admit. We do not see why this is not a good experiment to try. It was tried some forty years ago in France, where it was unfortunately terminated by the sudden death of many thousands of the workmen in a difficulty with the military. The public workshops were found to be so unprofitable that their expenses had to be reduced; the workmen naturally struck, and, their employer being the State itself, they came in collision with the force of the State. But, as a rule, men will learn only by experience, and a sharp experience of this kind, if tried now, might save us from a more lingering and more fatal disorder.

The arrest of the murderers of M. Beltcheff, the Bulgarian Minister of Finance, is an event which may have very serious consequences. Beltcheff was shot dead on his own door-step, where he was standing in company with M. Stambuloff, the Prime Minister. As he had no enemies, while Stambuloff had and has many, the theory most commonly accepted has been that the murderers intended to kill the latter, but made a mistake in the darkness. The key to all the troubles in Bulgaria is the natural and burning ambition of that country to be an independent nation, and to expand as time and opportunity shall allow. Stambuloff represents this idea. Opposed to him is the faction which, whether in the pay of Russia or not, aims to make the country a dependency of the Czar. The greater part of educated Bulgaria sides with Stambuloff, but the other side has a considerable following among the peasantry, who only remember that when the Russians were in Bulgaria, money was plenty and the prices of grain and vegetables high. It is useless to speculate on the revelations that the trial of the assassins may yield, but it will be strange if some light is not shed on the Eastern question in general, including the Panitza affair and the kidnapping of Prince Alexander.

THE OHIO CAMPAIGN.

THAT the Democrats of Ohio would set their faces against the McKinley tariff, and against protective tariffs in general, and would renominate Gov. Campbell, were conclusions anticipated before the meeting of their State Convention. What position they would take on the silver question was a matter of doubt. The platform adopted favors free coinage, but this result was secured only after a stout battle on the part of the opponents of that policy, the majority being 99 in a convention of 700. Moreover, as we are informed, last year a free-silver plank was put in the platform without opposition in the Convention, and with but a single negative vote in the Committee on Resolutions. This year nine of the nineteen committeemen who voted were opposed to the plank. The silver plank, then, is not conclusive of the attitude of the party in Ohio next year, when the issue will become more pertinent than it is now; but it is something which cannot be overlooked. The Republicans have taken their stand on the present law, which, in our belief, will conduct the nation to the silver standard if adhered to, but by a gradual process. The Republican position is better than the Democratic in this particular, but the difference is not as wide as the poles.

The significance of the Ohio campaign will depend very much upon the way in which it is conducted. It is possible for the campaign managers to give such prominence to the tariff issue that the silver question will be lost sight of for the time being, and this seems to be the most probable course of events. The Republicans, by nominating Mr. McKinley, have taken their stand on the measure which bears his name, and the Democrats have in express terms acknowledged the challenge. "We accept," they say, "the issue tendered to us by the Republican party on the subject of the tariff, as represented by the so-called McKinley Tariff Act, confident that the verdict of the people of Ohio will be recorded against the iniquitous policy of so-called protection, championed by the Republican party in the interest of favored classes against the masses."

If the speeches made in the Convention may be taken as the keynote of the campaign, there will be, as there ought to be, an illuminating and enlivening discussion of the items of the McKinley Bill, and the Republicans will be put on the defensive at a hundred different points. So long as the controversy is waged over abstractions, very little headway will be made, but when the particular things in this measure are brought under review, it will be found to be essentially a dishonest measure. It is not necessary to affirm, and we do not affirm, that the persons who voted for it, or who now support it, are dishonest. The greater part of them are as honest as other people, but the measure itself reeks with dishonesty from beginning to end, as do nearly all the protective-tariff taxes ever passed by Congress. The reason why they are filled up with swindling provisions is perfectly plain. When Congress attempts to overhaul all the industries of the country, every man who has any special pecuniary interest in it is prompted to go to Washington to work for himself. Congressmen are for the most part lawyers, having little acquaintance with business, and even if they had much acquaintance with business in general, they could not have it with each particular trade. Probably the man having the most varied information in the last Congress was Senator Aldrich. Yet the blunders he made in dealing with particular things were in many cases startling and always pernicious. No doubt, in each such case he took the word of some interested party and made no independent investigation, for which, indeed, there was no time.

As illustrating Mr. Aldrich's ways of arriving at the truth, and as exhibiting the dishonesty of protective tariffs in general, we recall for a moment a confession made by that Senator when somebody asked him how the duty on iron ore had been fixed at seventy-five cents per ton in the tariff of 1883. Both houses had voted for fifty cents per ton, although in different bills. Not a vote had been taken authorizing any higher rate of duty. Morally, the Committee of Conference, to which the subject was finally referred, was bound to report the duty at fifty cents, neither more nor less. But when the bill was reported, this particular item had been raised to seventy-five cents, and it was necessary for Congress to adopt that rate and take the risk of its far-reaching consequences or to reject the bill altogether. When Senator Aldrich was asked why this had been done, he said that it was done at the suggestion of "Billy" Mahone of Virginia, who was not a member of the Committee, although he was a member of the Senate at that time. There is no reason, apparently, why any particular rate of duty, once agreed to by both houses, should not be increased in this underhand way at the suggestion of anybody, either in or out of Congress. There are several items in the McKinley tariff involving very large interests that were smuggled into the bill surreptitiously in the same way as Mahone's iron-ore tax was in the tariff of 1883.

The duty on tin plate was a swindle from the outset. The mainspring of that increased duty was not the hope and expectation of starting the tin-plate industry in this country, but of compelling people to use galvanized iron instead of tin for roofing purposes. The wool items of the tariff, again, are full of deceptive and swindling provisions which have been repeatedly exposed in the public prints and by manufacturers who are themselves protectionists. The fact that these deceptive and underhand provisions have brought no benefit to those whom they were intended to help, and have yielded only heart-burnings and mutual crimination between wool-growers and manufacturers, ought to be, and we doubt not will be, effectively used in the Ohio campaign. If McKinley is put to explaining *seriatim* all the bad things in his bill, he will be left with a large arrearage of overdue accounts.

THE DRAIN OF GOLD FROM THE TREASURY.

THE Treasury statement at the close of the fiscal year 1890–'91 (June 30) showed that the gold reserve held by the Government was, in round numbers, $117,600,000. This is very nearly the lowest sum held at any time since the resumption of specie payments. Once before the reserve has been ominously low—in May, 1885, when it sank to $116,000,000. During the fiscal year just elapsed it declined in two great jumps. On July 1, 1890, it was $190,000,000, on October 1 it was less than $150,000,000; then for six months there was a cessation of the drain, the amount being still nearly $150,000,000 on April 1. During the last few months, the amount has again fallen, and with extraordinary rapidity, going down to $133,000,000 at the close of May, and falling to less than $118,000,000 at the beginning of the new fiscal year. Whether the decline will proceed further remains to be seen. During the period since June 30 there has been no material change, the figures for Saturday, July 18, being $117,570,000.

The cause of this shrinkage, or rather the other side of it, is to be found in the character of the money received by the Government in payment of taxes. Until the beginning of the fiscal year (1890-91) those receipts had been for some time paid almost exclusively in gold. Until September 1 of last year the Government was still getting 90 per cent. of its customs receipts at New York in gold or gold certificates; but since then the percentage has steadily fallen, in March to 65 per cent., in May to 28 per cent., and in June was as low as 12 per cent. In other words, more and more of the public receipts have been in other sorts of money than gold; in silver certificates, in greenbacks, and in the new silver currency—the Treasury notes of 1890. At first silver certificates took the place of gold; then the new Treasury notes shouldered it out of the way; and finally the greenbacks have begun to come in. In the last full month, June, the silver certificates contributed 14 per cent. to the customs receipts at New York, the new Treasury notes contributed 29 per cent., and the old legal tenders or greenbacks no less than 44½ per cent.; leaving in gold only the beggarly 12 per cent. already stated.

Under such circumstances the gold holdings necessarily decline. The Government is constantly paying out gold, especially through the New York Clearing-house; and its maintenance of a gold reserve depends on a continual inflow of that metal in its tax receipts. If the present movement goes on a few months longer, the gold reserve of the Treasury will have disappeared, and with it the gold standard as the basis of our entire circulating medium. The significant sign of an approach to that unfortunate condition is always in the character of the money turned in to the Government at New York. The critical situation in May, 1885, to which we referred a moment ago, was brought about in precisely the same way, and it is doubtless in this way that the breakdown will eventually come.

The causes of the striking changes which

the last few months have shown are not far to seek. The leading cause, of course, is the issue of the new Treasury notes under the act with which the last Congress blessed us. Combined with it is the depression in business which set in last fall. The new notes are issued to the amount of four and a half millions a month, more or less. If the steady increase in the transactions of a growing community called for this additional amount, they would be used in the exchanges of every-day life, and would remain permanently in circulation. The saving of the gold standard under the old Silver Act of 1878 was that it did not necessitate, on the whole and in the long run, the issue of more silver than could be absorbed in this way. It is doubtful whether the doubling of the issue in 1890 would not have caused trouble in any event; but, coming as it did in a period of depression such as we have had for the last eight or ten months, the result has been inevitable. The new note issues have put forth more money than the community could conveniently use at the present scale of prices and under the present volume of business. They have not caused, as might have been predicted, that immediate revival of activity which our friend Mr. Bland and his associates have so often and so eloquently depicted as the certain effects of their panacea of "more money." They have drifted back into the hands of the banks, and through the banks into the Treasury. The movement has now reached the stage not only of an ominous decline in the gold reserve, but of an ominous wavering of general confidence in the ability of the Government to maintain the policy which it has successfully followed ever since the resumption of specie payments—that of paying gold to every public creditor who demands it. The marked inflow of greenbacks into the Government's hands is the unmistakable sign of that decline in confidence.

We will not be so rash as to predict an early breakdown. No doubt the maintenance of the gold standard depends on the continuance of gold payments by the Treasury, and the present drain is bringing the Treasury in sight of danger. But if the crops prove as plentiful as is expected, the movement may be checked. Abundant crops mean not only an increase of exports, which will check the call for gold on foreign account, but also a demand for currency in the West and South which will greatly aid the Treasury. The regular autumnal call for money "to move the crops" will carry to the West a large part of the silver certificates and Treasury notes which are now displacing gold in the tax receipts, and will cause gold to resume something like its former proportion. We may hope that the tide will soon turn, and that the gold reserve will be maintained at its present point, and even replenished to some extent. That it will be permanently maintained, however, cannot be hoped. The issue of silver money under the act of 1890 is excessive: four and a half millions a month is more than can be absorbed in the daily use even of a country advancing as rapidly in wealth and population as the United States. The silver notes sooner or later will crowd out the gold, first from the Government Treasury, and eventually, if the process is allowed to work itself out, from the country at large.

THE MISFORTUNE OF THE CENSUS.

It is probably the case that the ordinary citizen does not regard a census as a matter of very great consequence, and he concerns himself little with the criticisms that are made upon our census of 1890. This view, however, is entirely inadequate, and the matter is in so many ways of such extreme importance to the public that it deserves a careful examination. A census is not a detached event or phenomenon. Viewed by itself it is of comparatively little interest. Its significance appears when its results are compared with what has already been ascertained. It is, to be sure, a national taking account of stock. It ought to tell us how many we number, how many are born, how many have died, and how many have come from abroad. It ought to tell us what our possessions are, what our income is and what our outgo, and in general to set forth such information as every sound business man desires to have concerning his own affairs. But this knowledge only acquires its full value when it is compared with knowledge already recorded. The census, in a word, is a term in a series. If the term is dropped out or is uncertain, the whole series is affected. It becomes impossible to derive any general principles as to rates of progress, as to directions in which changes are taking place, as to the scale upon which tendencies and movements are manifesting themselves, or even as to the existence of such tendencies and movements.

Furthermore, this is not a matter of purely national consequence. The United States constitute one of the family of great civilized States, and whatever takes place upon any large scale in our development is of interest and importance to the world. In the calculations of the statist all mankind are included—*humani nil alienum.* If the hygienist is endeavoring to establish conclusions upon which regulations affecting the health of his own community are to be framed, he desires to have as broad a basis of experience to go upon as possible. If the merchant proposes to employ his capital in the grain traffic, he desires to know what is produced not only in one country, but in all countries. The intelligent regulation of our future acts depends upon an accurate knowledge of the past, and for this knowledge upon a large scale and in social affairs in general the census reports are the only repository. If the knowledge is not to be found there, it is in many cases not to be found at all. If it is imperfectly obtained or incorrectly recorded, the mischief is irreparable. If the chance is not improved, it is lost, and no subsequent labor can in most cases repair the loss.

The mischievous consequences, therefore, of a defective census are world-wide and far-reaching. They will continue to exasperate the statistician and to perplex the statesman, not for a decade, but for half-a-century. Every investigation that is undertaken will be hampered, and it will be open to every one to question or repudiate every conclusion that is reached by the use of data which are themselves questionable. With such data the economic charlatan stands on a level with the trained economist. Every attempt at a scientific induction must involve the use of figures corrected more or less by guesswork, and hence all such inductions will be open to attack by any one who is displeased with their result upon the ground that guesswork is not science.

The responsibility, therefore, of President Harrison, when it became his duty to select a Superintendent of the Census of 1890, was grave. The place called for a man of proved scientific capacity and attainments, and such men, we are proud to say, are not lacking in our country. It would have been possible to find men of that type who were identified with the Republican party, and whose character, both personally and as investigators, was so high that the most bitter partisan would not have ventured to breathe the suspicion that motives of party expediency would be allowed to affect their official work. And this should have been no light consideration, for upon the result of the census as to population depended the apportionment of Representatives in Congress. Finally, it would have been possible to appoint a native American; and if there ever was a case where the maxim of the old Know-Nothing party, "Put none but Americans on guard," would have applied, it was in filling a post where the most prolonged and extensive familiarity with our country would have been none too great a qualification for the proper understanding of the work to be done.

Instead of being influenced by considerations of this broad kind, President Harrison seems to have made this important appointment upon party grounds alone. Doubtless his own education and habit of thought had not made him acquainted with the important part played by statistics in modern times, but he at least knew the names of men of distinction in the scientific world who could have enlightened his ignorance. Rather than take advice of this kind, however, he preferred to seek counsel from his high-tariff Pennsylvania supporters, and accepted at their suggestion a man of foreign birth, distinguished chiefly for defaming his native country, of imperfect education, known only by his inferior work on the preceding census, and by the ardent protectionism which won him a place on the Tariff Commission and caused him to be put in charge of a virulent and unscrupulous campaign newspaper. A more unfit appointment in every respect could hardly have been made.

It is believed, by persons having exceptionally good opportunities for obtaining information, that this appointment was directed by the ring of Pennsylvania protectionists for the express purpose of manufacturing evidence in favor of their monopolies. The Tariff Commission of 1883 had shown that there was no reason for maintaining the protective duties at their then high rate, and this ring determined that the next census should be taken by a man who would see to

it that no evidence supporting such unpleasant conclusions should be admitted. But it is unnecessary to rest the case against this appointment upon beliefs the truth of which is not demonstrable. We have the indisputable fact that the work of Mr. Porter upon the census of 1880, the volume upon taxation, was grossly bungled. In that volume we look in vain for any reference to poll-taxes, to license taxes, to corporation taxes. With such omissions as these no estimate of the amount of taxation is possible, and the whole report upon this subject becomes worthless for the purpose of statistical comparison.

As to the present census, the blunders committed in the bulletin of municipal expenditure are now exciting the ridicule of every unmuzzled newspaper. Other blunders have been exposed as they have occurred, but of course the fundamental and irretrievable error was made in the enumeration of the people. As was pointed out by *Nature*, even if we increase the population of 1870 to 40,000,000 to help Mr. Porter out of his difficulty, thus reducing the apparent increase between 1870 and 1880 from about 9,000,000 to about 7,500,000, we should still be confronted with the fact that, "starting from a larger population, and with a larger immigration, the excess of births over deaths in 1880-'90 would have been from 25 to 30 per cent. more than in the previous decade, or at least 9,500,000, whereas it appears to be under 7,000,000." It is this blunder which will confound all who attempt to make comparisons of the rates of growth of populations, and will make the millions of dollars spent on this census worse than wasted. It may be that Mr. Porter has done his best, but President Harrison can offer no excuse for committing the most important, and, we might almost say, the most difficult and the most delicate of all scientific experiments, into the hands of an utterly unqualified political adventurer. It is one of the greatest sins of his Administration, and one that the public should not forget.

NORWEGIAN POLITICS.

COPENHAGEN, June 30, 1891.

NORWAY has its own Ministry, responsible to the home Parliament, but the Scandinavian Foreign Office, representing the Union abroad in both diplomatic and consular affairs, is Swedish. The Minister must, according to the Swedish Constitution, be a Swedish subject, appointed by the King as King of Sweden, and responsible to the Swedish Chamber. All foreign questions are referred by this official either to the Ministerial State Council, which is purely Swedish in origin, but to which, since 1837, the Norwegian Minister of State has been admitted, or to the Combined Council, a body formed in 1814, and composed of both Norwegian and Swedish members. To the latter body are referred important foreign questions, such as treaties, conventions, extraditions, salaries, etc. The Ministerial Council has charge of all matters not contained in the duties of the other. The responsibility for the whole, however, is vested in the Swedish Minister, while the official language of the department is Swedish.

The only point in which Norway's share at all approaches that of Sweden is in the expense. It is not strange, therefore, that a vast majority of the Norwegian people, without respect to party, should be highly dissatisfied with this arrangement. From every side complaints are heard. So grave, indeed, has the question finally grown that the Conservative Ministry of Stang was forced to resign in consequence of its non-success in solving the difficult problem. What makes the situation doubly galling to the independent Norwegians is the fact that their commerce exceeds that of Sweden more than twice over. In no particular, except that of population, can Sweden claim superiority over its sister kingdom. In art, literature, manufactures, and commerce Norway is her equal if not her superior. The two kingdoms are, furthermore, commercial competitors. Each has its separate custom-house, each strives to attract trade and capital to its own advantage. It would never occur to two competing business houses to employ the same foreign agent, responsible to only one of them, yet this is just what these two competing countries are doing.

The question resolves itself into two parts, the diplomatic and the consular service, of which the latter, as being the more pressing and practical, may properly be considered first. However much the national pride would be gratified by a separate diplomatic representation abroad, there are many thoughtful men in Norway who regard this measure as both unwise in its conception and unpractical in its execution. With regard to the consular representation, on the other hand, there is a far greater approach to unanimity. The consular service is a strictly business affair, having nothing to do with a nation's foreign policy. No mention is made of a common consular service in the agreement of Union, and the majority of Norwegian authorities, as well as many Swedish ones, are of the opinion that Norway never relinquished its right to such separate representation. For four hundred years before the Union, Norway, being a province of Denmark, had no organized consular service, and during the few months of its separate existence no steps were taken in this direction. It was natural, therefore, that the Swedish service should be taken provisionally, without, however, thereby acknowledging the necessity of such an arrangement in the future. Legally, this prerogative can be exercised by the Swedish Ministry only so long as the Norwegian people permit it.

That Norway's right to attend to its own consular affairs is actually recognized by the Swedish Government, is proved by the fact that all such matters concerning Norway alone have for many years been referred to a branch of the Norwegian Department of the Interior. Were the authority now exercised by the Swedish Minister transferred, by a royal proclamation, to this department, the whole problem would be solved. The change would undoubtedly necessitate some additional expense, but this difference would be more than compensated for by the improvement in the service. The increased expense has been estimated by a Norwegian authority, Sigurd Ibsen, at 150,000 kroner (say $42,000) per annum. The great majority of Scandinavian consuls are unpaid, and, to simplify the matter still further, it has been suggested that these officials be retained, or, rather, receive a second appointment as Norwegian consuls.

It should be borne in mind, furthermore, that every just and proper claim obtained by Norway is a step towards a closer union of the two countries. One of the strongest characteristics of the Norwegian people is their jealousy of Sweden, and anything that tends to lessen this feeling must eventually prove a benefit to both countries. It is not to be expected, however, that the Swedish Chamber will consent to this change without a struggle. Temporary ill feeling will be excited by this as by every other Norwegian reform movement hitherto. But a slight passing irritation is far more desirable than the continual international friction produced by the present condition.

The problem of a separate diplomatic service, to whose solution the Liberal party is pledged, is by no means so simple as that of the consular. Even Norwegian authorities are at variance with regard to its legality, while Swedish statesmen are to a man opposed to it. By the latter, as well as by the Conservatives in Norway, it is regarded as a move towards the dissolution of the Union. As a compromise, it is suggested that the Minister of Foreign Affairs be either a Norwegian or a Swede, and be under the control of two delegations of equal numbers, formed from and by the members of the Norwegian Storthing and Swedish Rigsdag respectively; these delegations to meet annually, interchangeably in Stockholm and Christiania, each by itself, communication between the two to be conducted in writing. By this measure, Norway's share in foreign affairs would be gained without the least sacrifice of the Union.

Sigurd Ibsen, in his monograph 'Unionen,' advances in support of the Liberal plan of a separate Foreign Ministry the case of the various German kingdoms with their independent diplomatic representation. The German Empire, with its confederation of States under one head, each State having at the same time its own ruler, does not present an analogous case to the Scandinavian Union. Had Norway and Sweden each a separate monarch, with a third ruler as head of the Union, or, rather, confederation, the illustration would be a proper one. The Union Ministry, which is practically the same as that of Austria-Hungary, is objected to by Ibsen on the ground that such an arrangement is possible only when both countries stand on the same footing. But as Sweden, in his opinion, regards Norway as an inferior Power, actually, if not theoretically, under its domination, the proposition of the Conservative party would never be accepted. Objections have been raised in the past by the Swedish Chamber to Norwegian interference in foreign affairs, as being opposed to the spirit of the Swedish Constitution, but if a choice must be made between a separate and a Union Ministry, very few Swedes will hesitate to accept the latter.

We have seen that the organization of a separate consular service for Norway is desirable as serving to promote a better feeling between the two countries. The creation of a separate Foreign Ministry would, in the opinion of many, be quite as undesirable for the opposite reason. Disregarding the danger that might result to the Union, it cannot for an instant be doubted that such a change would excite in Sweden a feeling of distrust and indignation that could not but prove unfortunate for the whole peninsula. The question of the additional expense, which is estimated at 100,000 kroner (say $28,000) per annum, but which would probably be somewhat greater, is of minor importance, and concerns only the Norwegian Parliament. The complications, on the other hand, arising from the presence of two ambassadors, representing one Power, but responsible to two separate parliaments, are of moment to all foreign nations. Diplomatic negotiations have never been characterized by celerity, but even the most fanatical worshipper of red tape

must pause before the possibilities of delay presented by such an organization. Mr. Ibsen discreetly avoids this difficulty, confining himself to the advantages offered by the change. It is perfectly true, as he asserts, that the vast majority of diplomatic and consular questions do not concern both kingdoms, and that these can be disposed of by one of the ministers without reference; but what of the more important questions that concern the two countries in common? In Germany such matters are referred to the Imperial Ministry. What will be done by the double Scandinavian Ministry? Either it must be regarded as a sort of Siamese twins, having no power to act apart, or the one of its members must act as spokesman at the expense of the other. The first plan, though possibly satisfactory to the home governments, would hardly be approved by the foreign Power or Powers interested; the latter, if accepted abroad, would lead to infinite confusion and distrust at home.

The results of the fall elections will indicate the Norwegian policy for the ensuing winter. Without a two-thirds majority in the Storthing, Steen is powerless to act. Of a compromise between the two parties there is at present not the slightest probability, and of a voluntary concession on the part of Sweden there seems as little likelihood. Eventually the Norwegian people will, without doubt, declare emphatically in favor of one plan or the other.

DANIEL KILHAM DODGE.

UTRECHT IN RED, WHITE, AND BLUE.

UTRECHT, June 30, 1891.

OF the four universities of Holland, that of Utrecht is not the oldest, but in the opinion of the people of this city it is the most important. The pride they take in their "Academia" shows itself not only in the million or so of square yards of bunting which to-day garnishes all dwellings, but in solid financial support. The 500 students who form the undergraduate corps of to-day's merry-makers have been reinforced by hundreds of old alumni. These, with happy faces and plenty of beer and reminiscences, lead in the joyful celebration of the 255th anniversary of the foundation of the University, and of the 55th "lustrum," or costume-festival, which in Utrecht is as much an institution as the canals or cathedral tower.

To celebrate properly the feast, the tricolor flag—containing the same colors as those in the American national emblem and in their order—has been multiplied into millions. Not only are miles of streets hung with it in colossal size, but streamers, festoons, floral devices, the arrangements of products and fruits in the shop windows repeat it. The plumbers have been busy for weeks, and perforated gas-pipe, making figures of manifold form, awaits only the advent of darkness, at nine o'clock this evening, to blossom into fire. The principal streets have been turned into arcades of greenery, along which hang lines of glass cups the size of an ordinary tumbler. These, half filled with wax and containing a taper-wick, will furnish the major part of the illumination. The favorite devices, apart from the large special figures furnished by the popular retail stores on their fronts, are the University shield, the figures 1636-1891, the motto *Vivat Academia*, and, in a thousand varied forms, the shining sun of Utrecht. The outraying of this luminary lends itself finely to mechanical ingenuity and artistic effect. Especially prominent is the University motto, *Sol justitiae illustra nos.*

With three other fellow-Americans we visited in the morning the unpretending edifice of the University, which is connected with the Dom Kerk, or cathedral, by beautiful cloisters. These latter are now in process of restoration, and the exquisite sculptures tell in stone the story of Christianity in the Netherlands. The conquest of Frisian heathenism by the monks of Ireland and Rome is a touching one, and the sculptor has here found a congenial field for his trained powers. In the University itself, apart from the oratory or chapel, the chief interest to the tourist, especially if he be an American, lies in the Senate chamber. Like that of Leyden, the walls of this room are hung from wainscot to ceiling with portraits of illustrious men whose name and fame adorn this seat of learning. Among others that compelled our attention was one of Voetius, the great theologian, who sat to Rembrandt for his striking picture. Another, in fresher tints, was of the late Prof. Donders (whose influence in Holland rivals, if indeed it does not excel, that of Kuenen), and was painted by his wife. More than the portraits, inspiring though they are, does the event of January 29, 1579, rouse the historic memory and touch the imagination. Until 1593 Utrecht was the capital of the seven united provinces that dared the might of Spain. It was not until that year that the States-General, or national Congress, adjourned its sittings to The Hague. Here, in this room, in 1579, the delegates, under the presidency of Count John of Nassau, brother of William the Silent, signed the famous Union of Utrecht. Despite the fact that Philip II. was in it recognized as their sovereign, this document was really the written constitution of the Netherlands republic. It was only two years later that the States declared themselves a free and independent republic, to be finally recognized as such by Spain. It must have seemed like a David defying a Goliath for a little people of less than three millions of souls, with a country whose area scarcely equals half of South Carolina, thus to brave the might of the strongest nation in Europe. Yet these traders and sailors, whose home was a half-drained morass, dared the Power that had the finest infantry in Europe and the silver mines of Mexico and Peru at its back. Knowing that in union there was strength —"Concordia parvae crescunt" (By concord little things become great) was their way of putting it—they made in this room what was for two centuries referred to as the written Constitution and the supreme law of the land. Motley does, indeed, point out its defects, mainly with the idea of showing how inferior to the Constitution of the United States of America this instrument was, and rightly so. Nevertheless, this written compact of confederated States had, both as text and example, a mighty influence on all subsequent federal governments and written constitutions. Whether on the men who, after receiving a political education of nearly twelve years in the Netherlands, wrote in the cabin of the *Mayflower*, or on those whose writings before, during, and after 1787 show thorough acquaintance with Dutch political history, the example of the little patrician republic was powerful. Franklin explicitly declared that Holland was "our great example."

Other suggestions of influence upon American men and institutions were not lacking, as we stood in this historic room. One has but to compare the motto of the Utrecht University with that of Rutgers College in New Jersey to recognize this. "Sol justitiae illustra nos," and "Sol justitiae et occidentem illustra," are too much alike, with appropriate difference, not to suggest the borrowing of one from the other. The motto of the Utrecht school, adopted a generation after its founding, "Sun of justice, shine on us," is altered in America to "Sun of justice, illuminate also the West." Whence and how came the Rutgers motto? The mystery is not great to any alumnus of the American college who knows also the history of the people of the Reformed (Dutch) Church in America, who founded the College first called Queen's College at New Brunswick. The Rev. John H. Livingston, D.D., a scion of the great New York family of that illustrious name, was the peacemaker who healed the dissensions and united all parties in the Reformed Church. With Romeyn and Westerloo, he gave the Reformed Church in America its excellent written constitution, which is but slightly altered to this day, and he studied at Utrecht. When the centennial anniversary of the Theological Seminary at New Brunswick—which claims to be the oldest in America—was celebrated some years ago, Utrecht sent letters of greeting to her younger sister school in America, calling attention to the fact, and with pride, too, that Livingston had studied under predecessors of Donders and Doedes (who is still living) in Utrecht. Dr. Livingston had but to suggest a slight modification of the Utrecht motto, and Rutgers College, chartered and organized before 1770, had her appropriate motto, and her sons have yet an inspiring ancestral prayer.

The festivities of the *lustrum feesten* last a whole week, but this Tuesday, the last day in June, is the day of days. The two railways began early to pour their crowds into the city. Even the approaching visit of the German Emperor seems not to have distracted attention from Utrecht. Besides social reunions of all sorts, and musical attractions and manifold spectacles at the Tivoli gardens during the week, the costume-parade and illumination reveal the special characteristics of a Dutch celebration. The battle of St. Quentin (a town on the road from Mons to Paris) may be said to have marked the beginning of the Dutch war of independence, and in it both Spanish and French as well as Netherlanders participated. To represent the various illustrious men, as well as the costume of their time, was the ambition of the Utrecht students and the purpose of the brilliant display. From two until seven P. M., and again in the evening from eight until ten, the dazzling masquerade delighted a half-million spectators. The gorgeous colors, the shining silk, rich velvet, slashed sleeves, and jaunty plumed caps forcibly reminded one of the days when men, as well as women, wore rich and picturesque garments—in a word, when males arrayed themselves as much for effect upon the eye as females do in our generation. To behold the living effigies of William the Silent, Counts Egmont and Horn, Spanish colonels and English noblemen, riding gayly in splendid array and on superb horses, did indeed quicken the imagination. Nevertheless, the interruption of chronological order by so many eye-glasses was painful. A *pince-nez* is an anachronism, yet many of these sixteenth-century knights carried one astride the nose. Even among the men-at-arms who went afoot, these modern inventions were numerous. As in the days of old, the eyes of fair virgins rained influence, and approving dowagers wafted smiles and flowers from the upper windows of the houses. At night the city blossomed with fire. Although we were nearly crushed in the crowds, we found the natives good-natured and happy, with no disputes or quarrelling.

Despite the efforts of those who strenuously wish to consolidate the four universities of Holland into one—a purpose in which it is said the ultra-Calvinists and Roman Catholics are politically united—Utrecht may possibly celebrate another 255th anniversary. About the first of October this year the Queen will attend the laying of the corner-stone of the new University buildings. These are to be erected between the old edifice and the eastern nave, that part of the great church left after the destructive hurricane of 1674, and the lofty tower which, standing alone, is a landmark to four provinces. The money for the elegant new edifice has been raised by private subscription in Utrecht.

The recent elections, which show a pronounced Liberal victory, will compel the resignation of the Ministry, but until the visit of the German Kaiser is an event of the past, nothing will be done. For the present the political coalition of the ultra-Protestants and Roman Catholics against the Liberals is dissolved, and the usual recrimination indulged in by uncongenial allies when defeated is the order of the day. The large cities have in every case elected Liberals, the country districts supplying the anti-revolutionary and Ultramontane members. The general meaning is that Holland is entering more fully into the spirit and forms of that modern life which her heroic struggle in the eighty years' war did so much to create. W. E. G.

MARBOT IN THE PENINSULAR WAR.

PARIS, July 8, 1891.

THE publication of the Memoirs of Gen. Marbot is quite an event; the first volume has been read with avidity, and it may be said that these Memoirs will remain one of the most important documents concerning the First Empire. They have a savor, a sincerity, an originality, which is truly delightful. Who said that "the pen is mightier than the sword"? As a soldier, Marbot certainly played his part well, but his fame was cast into the shade by that of the great marshals of Napoleon whom he attended on so many battle-fields; as a writer, as an historian, he is now above par; none of the companions of the great Emperor has left us anything that can compare with his Memoirs.

The second volume, which has just appeared, is as interesting as the first. It begins with the account of Junot's expedition to Lisbon and of the intrigues of Napoleon, who profited by the division of the royal family of Spain, with a view to finally conquering the peninsula. The expedition against Portugal was a blow to England. Marbot considers that Napoleon was wrong in giving Junot the command of the army which invaded Portugal:

"The army saw in Junot a very brave soldier rather than a true captain. The first time I saw him I was struck and disquieted by the wildness of his eyes; his end justified my apprehensions. The origin of his fortune is known: a simple *fourrier* in the battalion of the Côte d'Or, he gained by a bon-mot the affection of the captain of artillery, Bonaparte, during the siege of Toulon. He followed Bonaparte to Egypt, became commander in Paris and ambassador to Lisbon. His gayety, his frankness, his reputation for courage, his prodigality, won him the friendship of the great and the sympathy of the masses. His success in Portugal, probably, determined the Emperor to choose him for the command of the army of occupation."

Junot was very imprudent. His only idea was to push his army forward, and nothing was ready to receive it. The French troops suffered much from hunger, but Napoleon's object was gained. Junot's vanguard threw Lisbon into great confusion. The regent, the Queen (who was out of her mind), the royal family, and a number of great families embarked on a fleet, and on the 28th of November, 1807, left for Brazil.

Marbot describes very well the state of Spain during these events—the insolent domination of Godoy, the Prince of Peace, the Queen's favorite; the division between King Charles IV., who thought of nothing but hunting, and his son Ferdinand, Prince of Asturias, who had conceived a very natural hatred of Godoy. The Spaniards, as a nation, sided with the son, who was persecuted by the favorite. Napoleon was concentrating a great army in order to profit by these divisions. In January, 1808, Marbot was appointed aide-de-camp to Murat and joined him at Bayonne. Murat entered Spain on March 10, 1808. The Spaniards, thinking that Napoleon wished to protect the Prince of Asturias, made no opposition. The King was preparing to fly with the Queen and Godoy; but, when the populace saw the furniture and the Treasury silver packed, a revolution broke out at Aranjuez. The Prince of Asturias was made King, after the forced abdication of Charles, and Godoy was thrown into prison. Murat entered Madrid on March 23. Hearing that Godoy was going to be brought to the capital, and fearing that he would be murdered by the mob, Murat sent Marbot on the road to Aranjuez to protect him. "I met Godoy two leagues from Madrid. Though this unfortunate man was horribly wounded and covered with blood, the body-guards who escorted him had put him in irons, and tied him in a miserable open van, where he was exposed to the burning rays of the sun and to thousands of flies drawn by the blood of his wounds, half covered only by rags. . . . This spectacle made me indignant, and I saw with pleasure that it produced the same effect on the French squadron which accompanied me." Marbot stopped the march of the little Spanish troop, and thus probably saved the life of Godoy.

Ferdinand VII. made his entry into Madrid on March 24. The people were delirious with joy. The French looked on this spectacle, but Murat did not even call upon the new King, being still ignorant what were the intentions of Napoleon—whether he would recognize Ferdinand or not. Ferdinand became uneasy, and asked the Ambassador, M. de Beauharnais, for advice. "Beauharnais, whose honesty was incapable of conceiving the thought that Napoleon could interfere with the liberty of a Prince who applied to him as an arbiter, advised him to approach the Emperor, who was expected at Bayonne. Ferdinand hesitated, but, hearing that his father and mother were going to Bayonne to plead their own cause, and receiving through Savary, who arrived suddenly at Madrid, letters from Napoleon himself, he decided to go." Napoleon, meanwhile, was advancing slowly on the road to Bayonne "in order to give time for events to prepare themselves." There is something in this last sentence which makes one think of Tacitus.

What followed is well known. Ferdinand left Bayonne, and found himself a prisoner in France. The insurrection of Madrid was the answer of the Spanish people to Napoleon. Marbot ran great danger in it; Murat quelled it with the greatest severity, but he himself felt that he could not, as he had wished, become King of Spain. "As a soldier," says Marbot, "I had fought against those who attacked the French Army; but I could not help recognizing inwardly that our cause was bad, and that the Spaniards were right in trying to expel foreigners who, having come among them as friends, now tried to dethrone their sovereign and to seize their kingdom by force. This war seemed to me impious."

Murat sent Marbot to Napoleon to announce to him the insurrection of Madrid. He accomplished his perilous mission with great celerity, and found Napoleon with the Queen and King of Spain. Napoleon put him many questions; Marbot did not hesitate to paint in the strongest colors the wrath of the Spaniards, the ferocious courage of the population, even of the women. Napoleon interrupted him: "Pooh! pooh! they will calm themselves and bless me when they see their country emerge from the opprobrium and disorder into which it has been thrown by the weakest and most corrupt administration that ever existed." The next day Ferdinand resigned his crown into the hands of his father, and his father abandoned to Napoleon all his rights to the Spanish crown in exchange for the château and forest of Compiègne and an income of seven and a half millions. Ferdinand received the château of Navarre in Normandy and an income of a million. Napoleon gave the crown of Spain to his brother Joseph. Marbot does not hesitate to condemn Napoleon severely: "The conduct of Napoleon in this scandalous affair was unworthy of a great man like him. To offer his mediation between the father and the son so as to draw them into a trap and then have them despoil each other, was an atrocity, an odious act, which history has condemned and Providence punished, as it was the Spanish war which prepared and brought about the fall of Napoleon."

The choice of Joseph was a mistake: a timid, lazy man, fond of art, a voluptuary. Murat would have done better. He had been very popular at first, but, after the bloody repression of the insurrection of Madrid, Napoleon thought him impossible, and sent him to Naples to take the place of Joseph. As Béranger said:

> "Un conquérant, dans sa fortune altière,
> Se fit un jeu des sceptres et des lois,
> Et de ses pieds l'on peut voir la poussière
> Empreinte encore sur le bandeau des rois."

Spain rose like one man against the French. After the capitulation of Baylen, where Gen. Dupont surrendered with a whole corps-d'armée, Napoleon diverted immense forces against the peninsula. Augereau asked Marshal Lannes, who was given a command in Spain, to take Marbot on his staff; before his departure Marbot was decorated with the Legion of Honor by the hand of Napoleon. "It was the 29th of October, 1808. It was one of the best days of my life, for then the Legion of Honor had not yet been bestowed with prodigality. . . . No promotion ever gave me such joy. What brought my satisfaction to its climax was the fact that Duroc sent for my cocked hat, in which a cannon ball had made a hole at the battle of Eylau. Napoleon wished to see it." (This hat is still preserved by Marbot's family.)

The Emperor himself took command, and fought the battle of Burgos on the 9th of November, 1808. Lannes gained a great victory at Tudela, and charged Marbot with the difficult mission of carrying the news to the Emperor. "The service of the aides-de-camp of the marshals was terrible in Spain. . . . I don't think I exaggerate in saying that two hundred officers of the general staff were killed or wounded during the Peninsular war, from 1808 to 1814." Marbot left Tudela on the 24th of November; he tried to cross the mountains, but he was attacked in a village, escaped miraculously, and had to fall back on Lannes s

vanguard. The account of his adventures in this expedition must be read in the book itself, as all the details are essential. It is certain that Marbot must have had a charmed life; it is hardly credible that he could have come out alive from the mountains of Soria.

The Spanish campaign of Napoleon was marked by terrible trials. Marbot saw the storming of Somosierra by the Polish cavalry ("the Poles," he says, "have but one quality, but they possess it in a supreme degree: they are very brave"); the crossing of the Guadarrama in the snow. At Benavente, a regiment of the Imperial Guard was defeated by Gen. Moore, and the Colonel, Lefèvre-Desnouettes, was made prisoner and sent to England as a trophy. Napoleon was recalled to France, and returned with his guard, leaving the army on its way to Saragossa under Lannes. The heroic defence of this town is well known. Marbot was wounded during the siege, but fortunately the surgeon was able to find and to extract an extraordinary ball, very large, hammered to the shape of a guinea, with a cross engraved on each side, and cuttings on the edge which gave it the shape of a wheel. Marbot was rapidly cured; his constitution seems to have been of iron.

Palafox has all the credit of the defence of Saragossa, but Marbot says that he contributed little to it, having been seriously ill from the first days of the siege. He was obliged to give the command to Gen. Saint-Marc, a Belgian in the service of Spain, but as Saint-Marc was a foreigner, Spanish pride invested Palafox with all the glory of the defence. Forty thousand men surrendered at Saragossa; they were taken to France as prisoners of war, but two-thirds made their escape during the march to the Pyrenees, and took arms again. Palafox received exceptional treatment in the capitulation; as he had taken the oath to King Joseph, Napoleon had him treated as a prisoner of state. Albuquerque, one of his friends, had to announce his fate to him. Palafox gave him his sword, saying: "If your ancestors, the illustrious Albuquerques, could come back to life, they would all prefer the place of the prisoner who delivers this sword, to that of the renegade who comes to take it in the name of the enemies of Spain, his country." Fine words, which have a savor of Plutarch's heroes.

Correspondence.

CREED MORALS.

To the Editor of The Nation:

Sir: With your usual frankness and courtesy, you will allow space, doubtless, for a criticism of your attitude regarding the present ecclesiastical discussions. As a constant reader of the *Nation*, I may say that what I value most in it is its fearless ethical teaching. But in this instance its moral analysis seems to me defective. This defect is betrayed in the very title of its article in the issue of July 9—"A *Plain* Moral Question." The moral question cannot be called plain, except upon the basis of two assumptions—one, the fixity or definiteness of a church's creed; the other, the definiteness of the individual clergyman's belief. Both of these must be denied in the cases under discussion. They are both impossible, except as theoretical data. It is not a matter of choice whether or no a man shall believe and repeat a creed exactly in the sense of its framers. It is an impossibility that he should do so from the changed conditions of life and thought. The same variability must exist between localities, or congregations, or individuals. The total apprehension of the Church changes from generation to generation, and the individual apprehension of the man from year to year, if both church and man are alive.

This is not only desirable, but is the true intention in both church and creed. A creed (any creed) in its origin is, *as a test*, an expression of loyalty to Christ; *as a doctrinal statement*, a challenge and incentive to a true understanding of him. The creed is diverted from its intention, and becomes a dead creed, when its value as a test is held to be that it is a final expression of the truth. In this way it happens that those who dissent from this last position are not really disbelievers, but the true believers in a live creed and in a living church.

In the position taken by the *Nation*, the alternative is either to cease thinking, and accept a church's statement, or else, if thinking is continued, to found a sect, even if it be a sect of one. But the day of this alternative is passed. The liberty of conscience is established, and a man may think as he likes and found his sect if he will. The problem is rather, *not* to found it. The struggle to-day is not for the individual's, but for the church's, liberty. It is easy to give over thinking and to accede to the formula of a sect, and it is likewise easy to throw over the creed of the sect and to set up the sect of one. The problem to excite moral enthusiasm is to remain true not to the sect, but to the church within the sect, and to struggle for the realization of the church idea.

The elements neglected, then, in the *Nation's* analysis of the moral conditions under consideration are, negatively, the impossibility of an authoritative definition of creed allegiance, and, positively, the moral courage and enthusiasm awakened by the desire for the Church's enfranchisement.

John W. Suter.

Andover, Maine, July 14, 1891.

To the Editor of The Nation:

Sir: In your recent editorial, "A Plain Moral Question," which concerns the indefensibility of a clergyman's persisting in membership of a sect the dogmas of which he questions, your argument would be sounder if churches would abandon the assumption which alone gives them authority over the conscience. If a church be a mere ethical or intellectual club, the bond of which is a contract to stick to a formula, then when a member is disloyal to that covenant, he has broken the bond and should "step down and out." This is the view that the secular courts, and the ecclesiastical ones too, would take; only, when the ecclesiastical court so adjudicates it stultifies itself. In canon law a condemnation for heresy does not put a man out of the Church, and theoretically it ought not. It only disciplines him, and regards him as an errant member, until it excommunicates him "with bell, book, and candle"; and excommunication is vastly more than excision from a society, for it pronounces on a man's relations to God, and theoretically consigns him to hell. Churchmen once acted consistently on this principle, and punished heretical members as its own recalcitrant children. It is folly to say that this was mediævalism, for every denomination which claims the character of a church implicitly sets up the same assumptions. Thus far, wherever any denomination had the power, it has acted upon them, and probably would again if it could enforce its jurisdiction.

I take these assumptions to be necessary to and inherent in the idea of a church. Such a body claims to be of divine origin and entitled to jurisdiction spiritually over its members. It does not appeal for adherents primarily on the ground of acceptance of a creed, but because it is the Kingdom of God, equipped with authority to administer its affairs in God's name and behalf, and it is the duty of men to join it under divine command—a duty which one neglects to the eternal peril of one's soul. Every denomination insists that it is more than an ethical association, even the custodian of grace and sacraments generally necessary to salvation. Each claims an organic succession of some kind from the days of the Apostles. If it would not accept a man who refused approval of its particular confession, much less would it receive a man who declared that he would teach that creed when he ceased to believe it, or who clouded with doubt his intellectual righteousness.

Now, what is the relation of such a body to a creed? Clearly, the body existed before the creed, and its confessions of faith are every one incidents of its growth, symbols of its development. There was a time, before each confession took shape, when the very promoters of the coming formula were disloyal to the preëxistent covenant, and were seeking to change the bond of union. There was no "dead-hand" then in control. A right to make development is involved in the doctrine held by every Christian sect that it has the power to alter its formulas. I am at a loss to see where the immorality lies in the conduct of a clergyman who exercises his prescriptive right to modify his church confessions, as every generation of conservatives and radicals have been doing for 1,800 years, and who throws upon his church the burden of trying and expelling him. That burden is but a small thing compared with the immense good that results to the Church from just such efforts to define or purify itself. Despite all their turmoil and exasperation, the benefits are permanent and great to the general body. Thus, the Presbyterian denomination is more tolerant and scholarly to-day for driving out Albert Barnes and Dr. Beman and retrieving that false step a generation later. That man always does the best service who is truest to his growing convictions, who fights for them in the associations where he formed them, and who bears manfully his defeat.

From the point of ecclesiastical pretension I conceive a member's relation to his church to be like that of a citizen to the State. Indeed, it is only of very recent years that even Protestant denominations have ceased to strive for secular jurisdiction. The Commonwealth of England was preëminently an effort to transfer State power from one sect to another. The analogy between the Church in its sphere and the State in its not only is complete, but it runs through all church polity and all legislation from the times when bishops usurped the functions of Rome's imperial magistrates. Now, who would contend that a citizen ought to emigrate from the State as soon as "he announces his contempt for the whole system" of its laws and government? He does this at his peril. Neither in a secular nor in an ecclesiastical court will his plea of mental dissonance avail, as it did not Herr Most; and in either tribunal the man whose defence is overruled must take the penalty. But his right to contend for his opinions, to work for revolution, and to put upon the State the burden of restraining him, cannot be questioned either in morals or in its beneficent results upon liberty and progress.

If this contention, which is, be it remembered, from the basis of church pretensions, cannot be maintained, does it not follow that the church idea has vanished? Then there is no divine society: denominations are only voluntary clubs. Practically this is what in the outside public judgment they are now, and the heresy-hunting epidemic tends to make them such more and more in their own estimation. I do not object to the process, but only wish, with what force is at my command, to call attention to the stultification of the church idea involved in the claim that a man ought to leave his sect when he dissents from its standards. D. O. KELLOGG.

VINELAND, N. J., July 11, 1891.

RELIGIOUS FREEDOM IN AUSTRIA.

TO THE EDITOR OF THE NATION:

SIR: The Supreme Court of Austria rendered a decision yesterday of more than local interest. The question at issue was that of the right of one who had taken the vows of celibacy in the Catholic Church to marry after he had gone over to the Protestants. Not only the Supreme Court, but both the lower courts which tried the case, decided against such a right.

The main points of the case are these: In 1870 one Knaus, a priest, who had thirteen years before joined a celibate order, renounced the Catholic faith and joined the Protestant church. He gave legal notice of the fact to the officials of the State. In 1879 he married a school-teacher, with whom he lived unmolested for eleven years. Then some one brought suit for the annulling of the marriage on the ground of incapability. The marriage law not only declares a marriage void when the contracting parties fail to notify the officiating minister of any fact which would render the parties incapable of marriage, but makes the withholding of such knowledge a crime.

In annulling the marriage, the District Court said the civil law recognized the Catholic Church, with its right to make disciplinary regulations for its subjects, and that there could be no doubt that "it lay in the interest of public order and morals" to support the legal discipline of the Church; that this Church, having the right to make rules binding on those who voluntarily placed themselves under its care, did not recognize the right of arbitrarily forsaking it, or of leaving its priesthood at will, or of renouncing, at pleasure, solemn vows.

The defendant pleaded that he held back nothing at the marriage which could have influenced the officiating clergyman, because no Protestant recognized these vows as binding on one who had left the Catholic Church; that if the civil law recognized the right of the Catholic Church to make such far-reaching disciplinary rules, that law was unconstitutional, for the Constitution (Article 14) expressly says: "Full freedom of faith and conscience is guaranteed to every subject, and the enjoyment of civil and political rights is declared to be independent of religious confession." Therefore, Knaus claimed that, having legally left the Catholic Church, he had no claims on it, and, therefore, could have no duties towards it. The Supreme Court said that it could not go into questions of denominational creeds and hairsplitting, but must leave that for the Legislature; that the marriage law forbade certain classes of persons to marry, and that the defendant, by voluntarily entering one of these classes, subjected himself to all the disabilities of the members of that class. Furthermore, the statutes of these orders being recognized as lawful, the defendant could sever his connection with the order only in accordance with the statutes of the order itself. Therefore, the constitutional argument was declared invalid.

Such is the interpretation the highest court gives to the meaning of freedom of faith and worship in Austria. Many similar suits are expected on the strength of this decision. The Catholic Church has thus been given a power that its most ardent disciple could scarcely have hoped for. Now the Church that holds the ignorant by threats of eternal punishment may hope to control its educated priesthood by the power of the civil courts.

JOHN H. GRAY.

VIENNA, July 3, 1891.

MATERIAL PROSPERITY IN IRELAND.

TO THE EDITOR OF THE NATION:

SIR: In view of the lively concern most of us in this country have in Ireland, it may be of interest to your readers to know that Dr. Grimshaw, Registrar-General for Ireland, three weeks ago read a paper on "Irish Progress" at a meeting of the Statistical and Social Inquiry of Ireland, in which he stated that emigration was gradually decreasing, from 109,000 in 1883 to 61,000 in 1890. He pointed out that the ratable valuation of the country has been increased by the growth of towns of over 10,000 inhabitants. The great feature in Irish agriculture, Dr. Grimshaw remarked, is the steady progress in the conversion of tillage farming into stock farming, while there has been a corresponding increase of agricultural wealth. Horses have increased by 37,000, and sheep by 1,067,000, or 32 8 per cent. In respect to manufactures, power-looms for linen manufacture have increased by 22.1 per cent., while the railway receipts show an increase of 17.7 per cent. With regard to bank deposits, during the first five years of the decade the annual average of joint-stock bank deposits and cash balances was £30,849,000, and during the last five years £31,443,000.

Considering the agrarian agitation and political situation of the last few years, Dr. Grimshaw is of the opinion that Ireland has progressed favorably in material prosperity during the past decade. C. A. S.

NEWPORT, R. I.

PROFESSOR HARRINGTON.

TO THE EDITOR OF THE NATION:

SIR: Your editorial in the *Nation* of July 9, apropos of Professor Nipher, might be construed as a reflection, unintentional of course, upon the appointee, Mark W. Harrington, Professor of Astronomy in the University of Michigan, who is referred to simply as "Mr." I had the privilege of Professor Harrington's instruction at the University nearly twenty years ago. At that time he was already a devotee of science, and had done important services for the Government in that capacity. Whatever Professor Nipher's qualifications or separation from politics, I am sure Professor Harrington can suffer nothing personally by comparison.—Very truly yours,

CHARLES E. LOWREY.

BOULDER, COL., July 13, 1891.

[We did not intend any such reflection, having had the literary collaboration of Professor Harrington in times past—a fact which we presume we can state without injuring his standing with the present Administration.—ED. NATION.]

Notes.

THE 'American Catalogue' for 1884-'90 is now complete so far as the author-and-title alphabet is concerned, having been issued in two parts from the office of the *Publishers' Weekly*. The work gives evidence of the steady increase of the output of books. The nearly 600 pages now available for reference will be supplemented in the fall by a subject alphabet for which 400 pages will be required. There are also to be several appendices, and, in fact, one—a list of United States Government publications for the above-named period—is already off the press. It has been compiled by Mr. J. H. Hickcox, under the editorial direction of Mr. R. R. Bowker, who vouches for it as being "absolutely complete and correct, as far as [in]fallibility is possible in this fallible world," thanks to the coöperation of Government officers in the several departments, with one narrow-minded exception. Other appendices promised are State Publications, "a new and important feature"; Publications of Literary and Scientific Societies; and Books Published in Series. Thus this invaluable record is made still more a work to be proud of.

Harper & Bros. have nearly ready several works of fiction—'Dally,' by Maria Louise Pool; 'The Uncle of an Angel, and Other Stories,' by Thomas A. Janvier; 'A Man's Conscience,' by Avery Macalpine; and 'Tales of Two Countries,' from the Swedish of Alexander Kielland, by William Archer.

D. Appleton & Co. announce 'Maid Marian, and Other Stories,' by Miss Molly Elliot Seawell, and 'Adopting an Abandoned Farm,' by Miss Kate Sanborn.

Bacon's 'Advancement of Learning,' edited by Prof. Albert S. Cook of Yale, is in the press of Ginn & Co., Boston, as is also 'Duty: A Book for Schools,' by Prof. Julius H. Seelye.

John W. Lovell Co. will shortly issue the first volume of a complete translation of Heine's works from the pen of Charles G. Leland; and 'The Little Manx Nation,' an historical and sociological account of the Isle of Man, by Mr. Hall Caine.

We are requested to state that Mr. James R. Gilmore ("Edmund Kirke") has withdrawn from the editorial management of the 'National Encyclopædia of American Biography' now in preparation by James T. White & Co.

The 'Cyclopædia of the Manufactures and Products of the United States' (New York: The Seeger & Guernsey Company) is about to be issued in a new and enlarged form. The work has undergone thorough revision, and, though classified, will have a general index, covering nearly 50,000 articles.

Mrs. Caroline E. Upham has condensed into a little volume, called 'Salem Witchcraft in Outline' (Salem Press and Publishing Co.), the story which has been told at length by her late father in-law in his standard volumes. Without marked qualifications for this task, she has nevertheless made a narrative that will impress the reader who comes to it ignorant of the subject. Views and autographic facsimiles have been borrowed from the larger work.

Not long since, Pastor Ziegler of Liegnitz in Silesia published a work entitled 'The Historic Christ.' The volume contains no new investigations, but simply gives a clear and consecu-

tive statement of the results at which scholarly research and sober criticism have arrived on this subject, and endeavors to turn them into the channel of religious instruction. The conscientious clergyman was of the opinion that the expounder of divine truth should keep his mind open to the light and never lose the courage of his convictions; and that the people whom he was appointed to instruct in religious things ought to have the benefit of any increase of knowledge which he might have acquired. These views, however, were not shared by many of his brethren, who instigated the provincial consistory to proceed against him for heresy with the intention of depriving him of his office. Fortunately, the Oberkirchenrath, or supreme ecclesiastical council, of Prussia interposed and ordered the proceedings to be stopped, and thus saved one of the most active, honest, and intelligent of Prussian pastors from infinite annoyance, if not from actual suspension from his benefice.

'Richard Wagner,' by Dr. Franz Muncker, Professor of Literature in the University of Munich, is the latest addition to the "Bayerische Bibliothek" (Bamberg: Buchner), and forms the twenty-sixth volume of this series of biographies of Bavarian worthies. Prof. Muncker is the son of the burgomaster of Bayreuth and an enthusiastic Wagnerite. To an historical sketch and careful critical analysis of Wagner's works he adds an interesting account of the origin and development and artistic purpose of the Bayreuth "Bühnenfestspiele," with a plan of the theatre and the stage arrangements, and colored illustrations of the decorations used in representations of the "Nibelungenring" and "Parsifal." There are also several portraits of the composer, taken at different periods of his life, and giving a sort of chronological survey of his facial and physical transformations, together with views of the various houses in which he dwelt. Pilgrims to the Mecca of Wagnerism during the present summer will find this book an inspiring guide and valuable aid to their devotions, and the very moderate price (one mark and sixty pfennigs, or forty cents) puts it within the reach of every one, and ought to insure it a large sale. The volume has no index and not even a table of contents.

Travellers in Egypt will find 'Sketches from a Nile Steamer,' by H. M. and N. Tirard (London: Kegan Paul, Trench, Trübner & Co.), a valuable handbook. The principal points of interest as far south as Abu-Simbel are described simply but intelligently, and with not too much enthusiasm. The temples and tombs, and the best methods of seeing them, of course take up the most of the book, but there are not wanting charming pictures of the daily life of the modern Egyptian, which cannot fail to interest the general reader. The closing chapter is upon Cairo, in which there is an unusually good, though brief, account of the scholars at the great mosque El-Azhar. There is an excellent index and several plans and illustrations from original drawings.

'The Arab and African,' by S. Tristram Pruen (London: Seeley & Co.), is an admirable sketch of Eastern Equatorial Africa and its inhabitants. A general description of the country is followed by a graphic picture of the daily life and employments of the negro, and a most interesting account of the incidents which accompany the day's march of a caravan. The author, who writes from an experience of three years' work among them as a medical missionary, gives an unusually favorable character to both African and Arab. The former is frequently very industrious, and can, if taken young, be trained to habits of industry, and is "quite decent in his outward behavior." The traveller, he says, will "never see an improper gesture, if careful of propriety himself." The Arab he commends for his honesty, courtesy, and sincerity in matters relating to his faith, while he defends him from some of the charges made ignorantly against him. The extent of the slave trade, of which he writes very soberly and suggestively, is indicated by the fact that during a twelvemonth which he spent at Mpwapwa, a place where many trade routes come together, 200 caravans passed through, numbering some 30,000 souls. There are many valuable hints as to the diet and manner of living for the preservation of the health, and an exhaustive list of the stores essential for a year's sojourn in the interior.

There is a certain degree of freshness about 'Alone through Syria,' by Ellen E. Miller (London: Kegan Paul, Trench, Trübner & Co.), which makes it for the most part very agreeable reading. The book is noteworthy, also, as showing that a lady can travel through Palestine, west of the Jordan, safely and comfortably, unaccompanied save by a dragoman. Miss Miller was not only more independent in her movements, but she saw far more of the life of the people than if she had been one of a large party. This, as well as the various little unusual incidents of her day's journey, she pictures with considerable ability, and wisely avoids detailed descriptions of well-known scenes and places. At the Church of the Holy Sepulchre she was witness to one of the amenities which distinguish the intercourse between the Greek and Latin Christians in Jerusalem. During a procession of the Franciscans, a Greek priest threw an inkhorn at the head of the Superior, but fortunately missed him. Especially interesting is the account of the home of a married Maronite (Catholic) priest in a little northern Syrian village where Miss Miller passed a night. In Syria she did not leave the beaten track of the tourists, but before entering the country she passed some time in Egypt, and devotes several entertaining chapters to sketches of Cairo, Luxor, and the region about Suez. The illustrations, from photographs, are well chosen and good.

'The Birds of Manitoba,' by Ernest E. Thompson, from the Proceedings of the United States National Museum, vol. xiii, pp. 457–643, is a paper of considerable importance to ornithologists. The list includes the names of 266 species, each accompanied by more or less numerous citations of localities and authorities. A large number of accurate and well-written notes on habits, captures, etc., gives the work an exceptional value and interest.

The *National Geographic Magazine* for May is wholly occupied with Mr. Israel C. Russell's narrative of an expedition to Mount St. Elias, Alaska, last year. It is preceded by a summary of previous explorations of this attractive mountain mass, and is accompanied by a large number of maps and photographic views. The author's style is spirited and popular and his account deeply interesting. It is to be hoped that he will have the good fortune to succeed in reaching the summit in some future expedition.

The Sargasso Sea is the subject of a paper contributed to *Petermann's Mitteilungen* by Prof. O. Krümmel. In it he discusses, with especial reference to Otto Kuntze's botanical theories, the two questions as to the existence of the sea in a fixed and definite position, and the origin of the plants which form its distinguishing characteristic. Though he does not deny the possibility of these plants fructifying in the open sea, he holds that this is very rarely the case, and that the greater part are torn from the neighboring coasts. Dr. Kurt Hassert attempts to define the northern limit of the habited and habitable earth and to show the causes for its changes in historic times. The accompanying map makes very evident the great contrast in this respect between the arctic regions of the Old and the New World. In the former, only two small strips of Siberia and a part of the New Siberian Islands are represented as deserted, while in the latter a large part of the Greenland coast and all the islands and mainland of America between latitudes 75° and 70° were once, but are not now, inhabited. An examination of the results of the last Greek census, taken in 1889, shows that the increase, 11.4 per cent., is chiefly in Attica and the cultivated land about Corinth. The Greeks show the same tendency as the other more civilized peoples to leave the country for the towns, the places containing over 5,000 inhabitants having gained 39 per cent., those under 5,000 only 5 per cent. Athens itself increased 69 per cent., being closely followed by its port with 59 per cent. gain. The great proportion of the people, however, 78 per cent., are still dwellers in the country. The Ionian Islands, with the exception of Corcyra, show a slight decrease.

Benj. R. Tucker, Boston, will publish next Saturday the first number of a new *Weekly Bulletin of Newspaper and Periodical Literature*, being in the main a classified catalogue of important articles in the press of the United States and the British Provinces. Title and author (when known) will be given, and "the number of words in the article." The novelty of this scheme consists in embracing the daily and weekly press.

Howard Lockwood & Co. send us Part 2 of their 'American Dictionary of Printing and Bookmaking.' It extends from Blatt to Chinese Printing, and is, like its predecessor, freely illustrated with technical cuts and with portraits. Bookbinding is one of the longest articles; Capitalizing is also fully treated, with a slant at our friends the librarians, who have a rule against excessive capitalizing. The Campbell press, the Burr type-setting machine, the Bruce founts, figure among our American inventions in these lines; and printers more or less American are commemorated in Samuel Bowles, William Bradford, Simon Cameron, and Mathew Carey, along with Caxton. Boston, Cambridge, and Charleston are examples of towns viewed typographically. Even Thomas Bowdler is regarded as within the scope of this dictionary.

A noteworthy agreement has been reached between the four leading libraries of Salem, Mass., to observe individual lines of purchase with a view to preventing unnecessary duplication of books. Moreover, the librarian of the Public Library is authorized to issue a card, addressed to any of his brother librarians, entitling the bearer to consult any work of reference in the latter's keeping.

Mayence is making extensive preparations to celebrate the centenary of the nativity of Franz Bopp, who was born in that city on September 14, 1791. All the German universities will be represented, and delegations are expected from the principal universities of other countries to do honor to one of the most scholarly pioneers in the province of comparative philology.

Wilhelm Weber, Professor of Physics in the University of Göttingen, died on June 24, in the eighty-seventh year of his age. In 1833 he ran a wire nearly nine thousand feet in length over the houses of Göttingen, and connected his laboratory with the astronomical observatory, of which Gauss was then director. By this means the two scientists were enabled to carry on

easy and rapid communications with each other, and greatly facilitate the study of magnetic forces and phenomena in which they were engaged. In a letter to the astronomer Olbers, Gauss writes: "I am convinced that by the use of sufficiently strong wires it would be possible to telegraph at one stroke from Göttingen to Hanover and from Hanover to Bremen." But neither of these eminent men ever made any attempt to extend and improve the means of telegraphic communication which they had discovered. Indeed, there is no evidence that they even thought of connecting by telegraph the numerous observatories which, at Humboldt's suggestion, had formed a "magnetic union" for the purpose of pursuing in common the investigations of terrestrial magnetism subsequently published in six volumes under the title 'Resultate aus den Beobachtungen des Magnetischen Vereins' (Göttingen, 1837–1843).

—The deterioration in the character of our legislatures and their legislation in recent years has led to various expedients of a reformatory or palliative nature. In some cases the field exempted from legislative interference by the Constitution has been enlarged; in others, the frequency of legislative sessions has been diminished. Both of these expedients have aroused hostility and received severe criticism, and the case against them has been summed up anew in a paper read by Mr. F. P. Prichard of the Philadelphia bar before the Law Association of that city. The remedy favored by him is the appointment of competent officers charged with the duty of revising and correcting the bills offered in the legislatures before those bodies are allowed to discuss them. That legislation would be improved by the operation of such a commission admits of no doubt, but the physical obstacles are very great, to say nothing of the task of persuading the legislatures to relinquish any of the control they now exercise over their acts. A body of legislative censors once existed in the State of Vermont, but it has passed away, and it is evident that there is some reason why a feature common in the artificial constitutions of philosophers does not appear in the constitutions developed by experience.

—Historical students cannot but welcome the 'Guide to the Principal Classes of Documents Preserved in the Public Record Office' which has just been issued by the British Government. This key to the greatest treasure-house of history is the result of some years of work on the part of Mr. S. R. Scargill-Bird, F.S.A., one of the staff of the Public Record Office, London. The work is prefaced with an Introduction which exhibits the knowledge of a specialist. Then follow the subjects upon which the various documents are likely to be consulted. Being arranged alphabetically, they resolve themselves into an index of contents, beginning with Accounts, Acknowledgments of Deeds, and Agarde's Indexes, and ending with Wards and Minors, Wills (Royal and Private), and Works and Buildings. Under some of the headings will be found valuable notes. Those on this side of the Atlantic who would seek for documents of more personal and direct concern to Americans will find these not only among the vast mass of papers, too barely noted under the head of Colonial Office, on page 87, but under various heads. Thus, under the head of Aliens, are two volumes containing the 'Names of Persons Naturalized in His Majesty's Plantations in America, 1740 to 1761.' Mr. Scargill-Bird says these contain "the names, etc., of those who availed themselves of Act 13, George II., for naturalizing such foreign Protestants and others as are settled or shall settle in any of His Majesty's colonies in America." Under Army, Navy, and Ordnance, are to be found establishment-books of Guards, Garrisons, and Land Forces in Great Britain and the Plantations, from 1741. Under Grants of Land are noted Carolina, 1674 to 1765; New York, 1665 to 1765; To Discoverers in America, from Henry VII.; North Carolina, 1725 to 1760; Georgia, 1760 to 1768; Jamaica, 1754; "List of Landholders; Plantations General," 1752 to 1771. Under the head of the Audit Office, we find Account of the Comptroller-General in Barbados and the Leeward Islands, 1684–1685; and a sub-heading for Accounts of Governors, Agents, etc., includes Cape Breton, from 1746; Carolina, 1776–1779; Florida, East, 1772–1786; Florida, West, 1764–1781; Georgia, 1752–1783; Jamaica, 1660–1675; Nova Scotia, from 1752; Virginia, 1754–1757; West Indies, from 1760. Also, under the head Audit Office, are found Agents' Accounts for purchasing presents, etc., for the Indians in the neighborhood of his Majesty's Colonies in North America, 1755 to 1785; Account of the contractor for victualling the settlers in Nova Scotia, 1740–1751; and Expenses for transporting foreign Protestants from Holland to Nova Scotia, 1751–1753. Under Emigrants is noted a list of emigrants to Nova Scotia, 1748–1749. As the publications by the British Government are made without any view to pecuniary profit, the Handbook is issued at the reasonable price of seven shillings, but a limited number having been printed. No historical society in the United States should be without it.

—The American Jewish Publication Society, which has just issued its third work, the first volume of the new English translation of Graetz's 'History of the Jews,' was organized in Philadelphia in June, 1888, with a view to publishing books on the religion, literature, and history of the Jews, and of fostering original work by American scholars in those subjects. It has branches in a number of the larger cities, with about 3,000 members, and is managed by an executive committee and a publication board. Its previous issues have been Mrs. Magnus's 'Post-Biblical History' and 'Think and Thank,' a story for the young. A special series of brochures has been begun, the first being devoted to a reprint of a pamphlet on the Russian question, to be followed by original and selected papers in Jewish literature and research, akin somewhat in style to *Chambers's Miscellany*. This is not the first attempt to organize a Jewish publication society. One was founded in New York not quite two decades ago, but died after publishing two minor works and the fourth volume of Graetz's History. The present outlook is certainly more auspicious. The Jewish community is larger, there is a better-equipped body of scholars and translators, and the public in general is more interested in Jewish literature, if presented in an appetizing form. Proverbial ill-fortune has invariably overtaken Jewish publication societies in England and Germany, possibly because they have been made to appeal to the learned few rather than the people, and especially to the young. The Philadelphia Publication Committee is in active correspondence with writers abroad and at home for fresh material, and its forthcoming works are likely to prove attractive. Financially the Society is in good condition, and it pays its writers handsomely. It is not at all impossible that should its career continue successful, it may publish a monthly magazine or quarterly upon a solid basis. In reference to the first volume of Graetz, just issued in English, it may be of interest to learn that the editor and chief translator was Miss Lowy of London, daughter of the Rev. A. Lowy, the Oriental scholar who doubted the genuineness of the Moabite Stone.

—Señora Bazán has her say, in her June *Teatro Crítico*, upon the "Roman Romanesque Moderne" of M. Prévost, about which so much has lately been said and written in Paris. She thinks that his wonderful idea that the coming novel is to relapse from the reigning realism into romanticism is "an aged idea which yet lends itself with feminine coquetry to the wearing of the red and white paint and false curls" put on by M. Prévost. "Sometimes commonplaces are strokes of genius," and she believes the young writer has aptly expressed the growing sense of revolt at the pessimism and cruelty, as Ohnet calls it, of the prevalent French school.

"Still, schools are a fact, and to deny their existence, or to boast of absolute independence, seems to me the same as to deny the external conditions imposed upon our natures. Nevertheless, in addition to the fact of a general tendency to which we all submit, there is the sacred right of artistic liberty. If anybody knows how to write good romantic novels, let him step at once into the arena, for we have the palms all ready for him. Now is the very time to ask

'Qui de nous, qui de nous va devenir un Dieu?'

For the rest, this new avatar of French literature was foreseen. To return to morality, to mysticism, to the méringues of psychology and the creams of feeling, was but natural after so much pepper, and mustard, and sauce piquante. But I am rather sceptical about it. These repentings and asceticisms of the *fin du siècle* are simply the well-known phenomenon of debauch—the nausea the day after. Let a few days pass, and at the first clash of the glasses, at the first gleam from certain eyes, away go the good resolutions. So if anybody wants really to be edified, he had better not wait for the coming idealist novels, but apply himself to the *Imitation*."

BREWER'S HISTORICAL NOTE-BOOK.

The Historical Note-Book. With an Appendix of Battles. By the Rev. E. Cobham Brewer, LL.D. Philadelphia: J. B. Lippincott Co. 1891.

THIS handsomely printed volume of nearly one thousand pages is in the main a condensed cyclopædia of universal history, minus the epitomized histories of states and reigns, as well as most of the biographical information belonging to a reference-book of this kind, but with the addition of numerous features not strictly pertaining to such a cyclopædia. It is designed to be a storehouse of information wherein the reader of history and general literature shall find a ready explanation whenever, in the course of his reading, anything of an historical nature presents itself about which he may need to be enlightened. Says the preface:

"Probably no one could turn over a couple of pages of this book and not find some item which he would be at a loss to explain or to find in any book near at hand. It may be hidden in some corner of history, some modern or ancient encyclopædia, some law dictionary, periodical, or book of antiquities; but, being neither tabulated nor inserted in the index, would be as hard to light upon as the traditional grain of wheat in a bushel of chaff."

The following miscellaneous list of subjects will suggest the range of the 'Historical Note-Book,' which contains more than 10,000 distinct entries: Armada, Battle of the Spurs, Chiltern Hundreds, Column of July, Dodo,

Dublin Castle, Eutycheans, Fable of Jenkins's Ear, Falk Laws, Free Trade, Gallia, Geneva Convention, Gonfalons, Gongorism, High Steward, Ludgate, Luther of England, Millenarians, Oak Boys, Peace of Nicias, Plon-Plon, Pocket Borough, Posse Comitatus, Postage Stamp, Puseyism, Raphael of Cats, Romance of the Rose, Sodor and Man, Sorbonne, Steelyard, Talmud, Thermidor, Three W's, Will's Coffee-House. There are twenty-nine separate entries introduced by the word "Liturgy," forty-nine by "Council" or "Councils," twenty-two by "League," fourteen by "Law" or "Laws," one hundred and eighteen by "Order," sixteen by "Rule," and fifty-seven by "Massacre," while there are no fewer than eight different "Scourges."

A very prominent and indeed the most characteristic feature of the volume is the extraordinary mass of entries under captions representing cognomens, sobriquets, epithets, nicknames, pseudonyms, and appellations of every kind. Thus we find "Demosthenes of France" (Mirabeau), "Demosthenes of America" (Webster), "Demosthenes of the Pulpit" (Dr. Thomas Rennell); "Cicero of the British Senate" (Canning), and six other Ciceros; the "Lion of Janina" (Ali Pasha), and a host of other "Lions," including the "Lion of Lucerne"; "Homer of Ferrara" (Ariosto), "Homer of Khorasan" (Firdusi), "Homer of Modern Days" (Scott), and nearly a dozen more of Homers; seven Michael Angelos, six Livys, four Sapphos; "Shakespeare of Harmony" (Richard Wagner, a "very exaggerated comparison"), "Shakespeare of Painting" (Salvator Rosa, "so called by Garrick"), and half-a-dozen more Shaksperes; eleven "Bards," etc. There is a "Russian Byron" (Pushkin), a "Russian Messalina" (Catharine II.), a "Mongolian Bonaparte" (Tamerlane), a "Danish Butler" (Holberg), a "French Roscius" (Talma), and an "American Cato" (Samuel Adams). Andrew Jackson figures in a triple guise at least, as "Old Hickory," as the "Sharp Knife," and as the "Pointed Arrow," and American democracy receives a tribute in such titles as "Rail Splitter" and the "Mill Boy of the Slashes" (Henry Clay). To give a better idea of this feature of the work, we must mention a few miscellaneous appellations not biographical: "Ireland of Austria" (Hungary), "Melancholy Magyars," "Garden of England," "Gate of Tears," "Gate of France," "Monarchy of the Barricades," "Four Burghs," "Foul Raid," "Quarrel of Friars," "Queen Bess's Day," "Rowdy Parliament," "Parnassus of Japan," "Maiden Violin."

Dr. Brewer appears to entertain an exaggerated notion of the importance of information of this class, and he has introduced a host of such explanatory items to which the general reader could not possibly have any occasion to refer, as he would come across the appellations in question only in situations where an explanation is unnecessary. Writers are not in the habit, for example, of speaking of the "Star of the North" (Gustavus Adolphus), leaving it to the reader to identify the character, or of the "Father of Statics" (Archimedes), or of the "Jewish Socrates" (Moses Mendelssohn), or of the "Portuguese Horace" (Antonio Ferreira), or of the "Flemish Raphael" (Frans Floris), or of the "Sicilian Ox" (Thomas Aquinas, "called *ox* from his great size"), or of the "Spoilt Child of Fortune" (Masséna). The fact is, that in collecting the material for this work, the author does not appear to have been even in the slightest degree influenced by the consideration as to what likelihood there was that the particular item would be sought in its columns. The volume has, therefore, a two-fold character: it is a reference cyclopædia, and a treasury of interesting items to be read as the eye happens to light upon them.

In spite of the statement in the preface that "Inventions and discoveries, the great staple of a book of dates, find no place here," we have, in turning the pages, come across "Boyle's Law," "Watches," "Vernier" (accompanied by one out of a dozen or so of illustrations which appear in the volume), "Electric Telegraph," "Pasteurienne (*sic*) Inoculation," "Pasteurise," "Listerise," "Gunter's Chain," "Mercator's Projection," etc., although the telephone, phonograph, sewing-machine, and most similar topics are excluded. With regard to biographical information (mostly of the briefest kind), the author's plan has been to deal mainly with personages who have received some appellation descriptive of character or talents, or who have figured under some pseudonym. Outside of this category he has found room in his museum for quite a number of rulers and other worthies. His selection, however, is curiously arbitrary, so that one might almost imagine that admission had been dictated by lot. Thus we find all the Georges, and Henrys, and Charleses of England, and the Heinrichs, Karls, Ottos, and Friedrichs of the Holy Roman Empire, but search in vain for Frederick the Great, or the Alexanders of Russia, or Czar Nicholas, and no Philips, ancient or modern, are to be discovered. Ferdinand the Catholic is ignored, notwithstanding his surname, and his consort, Isabella, shares his fate.

It is more unfortunate than surprising that the sixty years of reading with "a slip of paper and a pencil" at his side should have made our author so little of a scholar as these pages show him to be, in some departments at least. The work teems with blunders, inaccuracies, and shortcomings of every description. We shall point out a few for the sake of illustration. Under "Gonzaga" it is stated that the dukes of this house ruled in Mantua until 1665, "when the territory was taken possession of by the kaiser-king Joseph I." This kaiser-king did not ascend the throne until 1705, and the duchy became a possession of Austria in 1708. Under "Knights Hospitallers" we are informed that when the knights were "expelled from Judæa [*sic*], they were allowed by Karl V. (1530) to settle in Malta." On the following page, under "Knights of Rhodes," the author himself tells us that some centuries intervened between the events in question. "Sarmatia" is despatched in the following laconic words: "Russia in Europe. Russia in Asia was called Scythia." In the otherwise very lame account of the Peace of Westphalia we are told that "Lusatia and Alsace were taken from Austria, and Austria received instead Transylvania and Croatia." We wonder where Dr. Brewer got this information. Transylvania came out victorious from the Thirty Years' War, and it was not until nearly half a century after its close that Austria laid hands upon her. As for Croatia, the only Power that disputed her possession with the House of Austria was Turkey. Dr. Brewer has no space to speak of Attila's invasion under "Huns," the few words of history not extending beyond A. D. 375, but he makes up for thus abridging their career by speaking of the Hungarians as Huns under the head of "Golden Bull." In another part of this same article "Golden Bull," we read: "Since 1440 the electorate [in the German Empire] has been merely nominal, as the House of Rudolph has been permanently established." This item appears to have been "jotted down" while the author was reading with a "slip of paper and a pencil" at his side some old book published in the last century, for the last of the descendants of Rudolph who wore the imperial crown of Germany laid it down in 1806. We are told, it is true, in the notice of the House of Habsburg (*s. v.* "Habsburg") that the dynasty still continues to rule "in that part of Germany called Austria and Hungary." What German patriot ever dreamed of such a "Vaterland"? The Farnese family is described as a "princely Italian family" without the slightest indication being given of the time at which it flourished, and without any mention of the fact that it was long the ruling dynasty in Parma.

Coming to America, we learn that the "Minute Men" were the "militia of 12,000 men enrolled by the American Congress adjourned from Concord to Cambridge." The chronological data concerning our country cannot be said to be very reliable, but the compositor may be responsible for some of the errors. In the voluminous dictionary of battles which constitutes an appendix to the work, we find February 6 as the date of the battle of Shiloh (April 6, 7), October 11 (instead of October 7) for the battle of Saratoga, July 16 (instead of August 16) for the battle of Bennington, January 2 (instead of January 3) for the battle of Princeton. In this dictionary of battles we fail to discover Wilderness, Hampton Roads, or Chattanooga.

This cyclopædia is preëminently a cyclopædia of facts, but the author's personality crops out here and there in telling characterization, usually appended in fine type. Thus, "Milan Decree" winds up with, "Most certainly Napoleon was no politician." Under "*Times*' Memorial" he says: "The attempt to expose the Irish Land League was equally noble, but miscarried through the villany of one Pigott." Under "Plug-drawers' we read: "The Luddite orators, 1811, the Chartist orators, 1848, etc., and the Home Rule orators, 1890, etc., are your plug-drawers who waste their sympathy in 'one weak, washy, everlasting flood.'" In the two pages of fine print devoted to "Macrobiots," the author presents us with a list of about a hundred persons in modern times whose life is reputed to have exceeded 120 years. The list winds up with Thomas Carn, who appears to have died in 1588 at the age of 207, "according to the parish register of St. Leonard's, Shoreditch." Dr. Brewer adds this commentary: "Some of the names are not worthy of credit, such as Rowin, whose wife was 164; Surrington, whose son was 103; Keit, whose youngest daughter was 109. However, the list is a long one, and it is well to have it handy." He has learned that three successive German emperors, Albert II., Frederick III., and Maximilian I., paid with their lives for their fondness for melons; and this fact (not gathered from Coxe's 'History of the House of Austria') has so impressed him that he not only takes pains to mention it in the biographical notices of the sovereigns, and under the head of "Eating Fruit (*Death from*)," but goes so far as to insert a distinct title, "Melon Colic," under which this wonderful incident is recorded. Nor has he forgotten the fatal grape-stone which deprived the world of Anacreon, and the Caliph Yezid II. of his favorite concubine, while "La Belle Gabrielle" is stated (*s. v.* "Eating Fruit") to have died from "eating an orange" and Gen. Knox from "eating raisins."

RECENT NOVELS.

A Group of Noble Dames. By Thomas Hardy. Harper & Brothers.

What's Bred in the Bone. By Grant Allen. Boston: Benj. R. Tucker.

On Newfound River. By Thomas Nelson Page. Charles Scribner's Sons.

Mea Culpa: A Woman's Last Word. By Henry Harland. John W. Lovell Co.

Tourmalin's Time Cheques. By F. Anstey. Chicago: Charles H. Sergel & Co.

THESE tales of "dear dead women" of the last century, to which Mr. Hardy has given a slight seeming thread of connection by putting them into the mouths of different members of "one of the Wessex Field and Antiquarian clubs," have much the same sort of fascination that one feels in reading the tales of the Arabian Nights. They are told with an inborn gift for story-telling which seems to cost the teller neither study nor effort, and which never wearies the hearer in listening. Unlike others which have a more dramatic interest, stories of this kind may be laid down at almost any point without uncomfortable sensations of suspense, and may be taken up again at any time without a flagging of interest. If they seldom touch the deeper springs of sympathy or emotion, they appeal to a practical experience of human nature in a great many different phases. Mr. Hardy's ten noble dames (with very varying degrees of noble instinct) move in a background of delightful rural scenery and stately domestic architecture of court, and hall, and manor house. One is not admitted too closely to their intimacy by means of frequent or minute analysis of character. A decorous reserve, like that approved in the manners of the times of which he writes, restrains the author's pen. When, however, he does describe, it is with clearness and decision: "Her virtues lay in no resistant force of character, but in a natural inappetency for evil things, which to her were as unmeaning as joints of flesh to a herbivorous creature."

As is inevitable in a collection of stories of very unequal length and finish, some of these heroines are brought more clearly face to face with the reader than others. Betty, first Countess of Wessex, will live longer in the memory than any of the other titled ladies whose histories follow hers. There is a mixture of pathos and humor in the means the eighteen-year-old heiress devises for escaping from the strange husband to whom; by a custom of Eastern barbarity, she has been married at twelve; and the far-sighted bravado by which the philosophic courtier seeks to make an impression on his obdurate young wife is most ingeniously conceived. The neatly pointed sarcasm of which the writer shows such complete mastery lends a zest to the whole group of stories. For the rest, the designer has done his work well in the pretty and original cover of the volume, and the few illustrations are pleasing and suggestive.

"But then, queer things are the way in Africa." So writes Mr. Grant Allen, after an inextricable jumble of circumstances has brought Granville Kelmscott and his (disowned) half brother, Guy Waring, to the diamond fields of the Dark Continent. It would seem, in the light of the events described in the story before us, that queer things are "the way" in England also, particularly in ancient and highly respectable county families and among their descendants. A secret marriage, an illegal one, and a murder are some of the skeletons in the closets of a couple of fine old seats in Surrey. A forgery, and the likeness of Cyril Waring to his absent twin-brother Guy, add to the general embroilment. Prominent in the plot is a charming young creature with a beautiful face and an inherited tendency to break out into the "Naga" dance whenever she sees a member of the serpent tribe or hears the appropriate music. She is gifted, moreover, also hereditarily, with an alarming power of knowing by intuition what is passing in the breasts of her acquaintances. We quite agree with Mr. Grant Allen in thinking that for young ladies thus intuitively endowed a course of study at Girton might be superfluous. We hope, however, that no young lady will ever be tempted, in default of an acquaintance with classical models, to form her style on that of 'What's Bred in the Bone.'

Mr. Page takes his readers into the pleasant scenery of a Virginia plantation. But, before the story closes, the quiet of the woods, the old mill-pond, and the river bottoms is broken by some very exciting events. The plot turns upon the indomitable, hereditary will of the Landons, in whom race qualities show a remarkable persistence. "Tall, straight, keen-eyed, aquiline they grew, father and son, for generation after generation, as distinct from their plain neighbors on Newfound as a Lombardy poplar is from the common pine." The family temper, which has already cost a master to the 500 negroes and the acres an heir, threatens to bring about a tragedy between "the Major" and his only son, Bruce. But the story is, in the end, one of averted consequences and unexpected restoration. The Major and the Perdita-like heroine, happy among her old books, her hollyhocks and sweet-peas, and cheering her aged grandfather with feminine wiles, fall into rather hackneyed theatrical attitudes on their first meeting in the thicket. The characters, in fact, which are found to be always true to the life, are those of the "plain neighbors on Newfound." The incorrigible negro, Dick Runaway, who keeps his eye on the would-be murderer because "he got meanness in him," and who is the means of bringing him to his doom (though not the intended lynching), is well drawn. The scene where Squire Johnson "opens cote" at Jones's Cross-roads is described with much humor. Other such pictures as this make amends for the over-elaboration of construction. Mr. Page would undoubtedly have produced a more artistic story if he had used more freely the novelist's privilege of selection, rejecting some episodes altogether, and dwelling with more detail on those chosen. But the characters of the Landon family show unmistakable signs of having been studied from life, and this alone goes far towards making their history readable.

'Mea Culpa' is, as the name implies, autobiographical in form. Notwithstanding the seeming repudiation of sensationalism in the beginning, it is in the end extremely sensational. The characters are few in number—only a selfish and egotistical father, his daughter, a husband who adds brutality to his egoism and tyranny, a friendly musical composer, who helps along the action whenever such help is needed, and the lover. The lover is an American by birth and an artist by profession. The others, with the exception of the musical composer, are Russians, and are old acquaintances of the novel-reader. As the consciences of Russian Serene Highnesses are supposed, when they are made to figure in highly colored romances, to be impervious to remorse, it is left for the American lover to declare that "the way of the transgressor is hard," although the manner in which he avoids treading in it is not the one approved by moralists. A certain amount of knowledge of the world must go to the composition of a novel of this kind, but it is not knowledge of a wholesome or penetrating sort.

From the fact of the navigator's gaining time in sailing with the sun around the globe, and the aphorism "Time is money," the author of 'Vice Versa' evolves an Anglo-Australian Joint Stock Time Bank, Limited, for the deposit of one's spare time at compound interest, drawable in sums not smaller than fifteen minutes, and cashed on presentation by any clock in motion. He applies this conceit to Peter Tourmalin on the voyage in the *Boomerang* from Sydney to Plymouth, England, with results as ludicrous as they are incalculable, and with a verisimilitude which Mr. Frank Stockton might envy. Mr. Anstey's ingenuity is equal to every demand of his absurd hypothesis, and is tested to the utmost by his contriving that the cashing of the minimum checks by which Peter is transported from London at will back to the deck of the *Boomerang*, shall be arbitrary on the part of the Bank so far as relates to the order of time. Hence Peter's successive experiences are not consecutive, the sequel often precedes the antecedent, and a series of fascinating complexities and misunderstandings and false situations arises, ending in a truly terrible climax. Mr. Anstey has done nothing more original or fantastic with more success, and it is to be said that the reader, however tempted to hurry on to the dénouement, can also without loss draw his chapters, as Peter did his cheques, with a decent interval. The American edition of this story shows, by its mean and slovenly typography, that it was the hurried last of the piracies in which we have heretofore indulged ourselves. We congratulate the author that his admirable and individual humor will hereafter have a right to be paid for by Americans who enjoy it—and may their name be legion.

FISKE'S AMERICAN REVOLUTION.

The American Revolution. By John Fiske. 2 vols. Houghton, Mifflin & Co. 1891.

THIS succinct account of the American Revolution is designed by its author to form part of a projected history of the United States, which, when finished, "shall comprise the whole story from 1492 to (say) 1865" within a compass "neither too long to be manageable nor too brief to be interesting." 'The Beginnings of New England' and the 'Critical Period of American History,' already reviewed in these columns, are also to form component parts of the completed work. The narrative in the 'Critical Period' takes up the story at the point where it ends in the last of the two volumes now before us.

Portions of these volumes have been already published as historical essays, or they have been used as the basis of popular lectures in cities "from Maine to Oregon." In view of the popularity which has waited on these lecture courses, Mr. Fiske expresses a modest surprise at the interest shown in "a plain narrative of events already well known." Though he says that he has "never to this day understood the secret of it," the secret will be pretty clear to the average reader. The narrative here given is written with an undisguised warmth of sympathy for the principles and the heroes of the American Revolution. The character-sketches, though drawn with a free hand, are very vivid in their outlines, and have a physiognomy which is pleasing to the popular sense, because they symbolize with patriotic ideals and give literary form to popular preconceptions. The smooth and limpid flow of the

writer's narrative style carries the reader along without much effort on his own part. The story seems to tell itself, so skilfully has the writer selected his threads and so well does he hold them in hand for the purpose he has in view. Avowedly shaping his narrative in such a way "as to emphasize relations of cause and effect that are often buried in the mass of details," he does not often pause to indulge in negative criticism, or in what he calls "circumstantial description"—though the minute detail with which the Duponceau kissing story is told (vol. ii., pp. 51, 52)—recounting how "the gay young Frenchman" contrived to kiss the first Yankee girl whom he met on landing at Portsmouth in New Hampshire—was perhaps hardly necessary to explain the nexus of events in the American Revolution.

As the plan of the book contemplates nothing more than a "general history" of the Revolutionary War, the author premises that he has not even undertaken to mention all the events of that period, but only those which are of prime significance. The reader, therefore, must not turn to these volumes in hope of finding "new facts"—Mr. Fiske puts us on our guard against such a presumption; but he may turn to them with full assurance of faith for a fresh rehearsal of the old facts, which no time can stale, and for new views of those old facts, according to the larger framework of ideas in which they can now be set by the master of a captivating style and an expert in historical philosophy.

It will be seen at once that the limited plan of the work, and the success with which the writer has performed his task, conspire to leave but little room for criticism. Slight mistakes and small inaccuracies there will be, of course, in any free handling of facts so multitudinous as those assorted and condensed in this historical compend. Mr. Fiske knows very well, though his text contains no intimation of the fact, that the extract which he purports to quote from the speech of John Dickinson against the Declaration of Independence is not taken from any such speech as reported at the time, but is culled from a so-called "vindication" written by Dickinson six years afterwards. Reference is twice made to the alleged fact that Gen. Charles Lee, "dying in a mean public-house in Philadelphia," expressed as his last wish "that he might not be buried in consecrated ground, or within a mile of any church or meeting-house, because he had kept so much bad company in this world that he did not choose to continue it in the next." This modified version of the military cynic's "last wish" completely misses the real point of his theological irony, and blunts the sharp sting of his anti-American antipathy. What the rollicking old deist really wrote in his last will and testament was this: "I desire most earnestly that I may not be buried in any church or churchyard, *or within a mile of any Presbyterian or Anabaptist meeting-house*, for *since I have resided in this country* I have kept so much bad company when living that I do not choose to continue it when dead." The italicised clauses point the gist of this post-obit jocosity. Such measured contempt for America and such exact graduation of theological bad odors (differing, it would seem, by a mile in point of their comparative pungency and penetrative power), should not have been marred in the quoting. Lee was always picturesque in the devil-may-care *insouciance* of his speech and conduct, but he was never more genuine or true to himself than in the extravagancy and crazy ribaldry of this "last wish."

We think it is something like a hasty generalization to say that "the four cardinal events" in the history of our Western frontier during the Revolution are these: "(1) The defeat of the Shawnees and their allies at Point Pleasant in 1774; (2) the defeat of the Cherokees on the Watauga in 1776; (3) Clark's conquest of the Illinois country in 1778–'79; (4) the detection and thwarting of the French diplomacy in 1782 by Jay." This enumeration leaves out of account the successful contention made by the "landless States" against the "landed States" for the Federal possession and control of the unoccupied Western territory. More of American history has hinged on this cardinal event than on almost any other in our annals—as witness the long delay in the ratification of the Articles of Confederation (to which Mr. Fiske adverts without explaining the reason for it), the passage of the Ordinance of 1787, the government of the Territories under the Constitution, the Missouri Compromise, the Kansas and Nebraska agitation, the civil war. Indeed, an American Senator, who is also a close student of American history, has ventured the remark that, without the national territory bequeathed by the constitutional law of the Revolution as a bone of contention in our Federal politics, it is difficult to see what the history of the United States would have been. The name of Gen. Cadwalader, correctly spelled in the first of these volumes, is misspelled in the second and in the index. The [*sic*] of surprise placed after Gen. Burgoyne's use of the phrase "is broke" seems hardly necessary. The locution was very common in prose and speech at the close of the last century, as Dr. Murray records in his great dictionary. Less can be said in defence of Gen. William Howe's use of "is drove," but then Gen. Charles Lee, who knew him well, admonishes us that Howe was "very illiterate." The statement made in the second volume (p. 26) that the Articles of Confederation "were ready by the summer of 1778" for submission to the States, rather obscures the fact that they were made ready for such submission on the 17th of November, 1777.

Criticism and Fiction. By W. D. Howells. Harpers. 1891.

Mr. Howells has for some years been making himself heard monthly as a critic of books in general, with a persistency discouraging to those who would gladly close their ears and retain completely their literary regard for him; and now he has made assurance doubly sure by gathering up a handful of these criticisms and making a book of them. It is a hazardous thing to collect journalistic work which naturally deserves only a momentary life; and when it is snip-snap in character—a word on this, a word on that, a compliment to a friend, a fling at a classic, a tirade at a whole class—the experiment will hardly escape one great risk. Mr. Howells has ventured it and not gone scathless. The fatal thing about this little volume is that it is dull. The excitement, such as it was, of seeing an author of position jeering at his predecessors, pitying Scott, depreciating Thackeray, pointing the finger at Goethe's crudities, and in general working himself up into a state of mind whenever the poor "classics," on their comfortable upper shelves, came into his thoughts, was amusing for a while; but now it is an old story. Writing of this sort, too, necessarily requires expletives, and expletives are, for literary purposes, few; it does not permit of much variety of mood, nor does it abound in thought; and the result is a monotony of style and matter that the most amiable cleverness in the use of slang, and the finest of contempt for "those poor islanders," cannot save.

There are two leading ideas or notions in the bundle of paragraphs that try hard to look like chapters. One is that critics are sorry fellows; the other is, that the art of fiction as now practised is finer than it ever was before—that is, provided it is practised in Mr. Howells's way. With the best of dispositions to discover more than these oft-repeated opinions, we cannot find more; the rest is, in fact, illustrative and expansive of these two propositions. The first, as to critics, may be disregarded; it is not new, nor is it of the least consequence when uttered by one critic about his fellows; it only means that he is intolerant. The second proposition is, however, original with its propounder; and, without discussing the truth of it, we shall notice only how it is supported by its author. When men put forth such a judgment of Scott as he has now made his own, they are regarded as persons who do not much trouble themselves with thinking, but consult only their dislikes, and we in turn do not trouble ourselves about their opinion; but Mr. Howells exhibits a remarkable faculty for supporting his views by quotations from some of the classics, Burke or Emerson, or by the character of Gen. Grant, or the contemporary opinion of Canon Farrar, and seems contriving to give the impression that these various persons agree with him fundamentally. This may easily mislead the reader, and its influence is increased by the frequency with which Mr. Howells reminds us that Spain or Italy or the Russias also agree with him; and so he establishes a prima-facie case. In other words, for we must be brief, he is an honest partisan who believes that all things work together to prove he is right. He is an advocate, and he makes no concessions, and never intimates any doubt of his argument. He uses his literary material as it is natural for an advocate to do. A few early startling statements attracted great attention, and since then he has been the critical sensationalist of the time. His little volume is the record of all this; but it has no value except as an example of eccentricity.

Cornwallis. By W. S. Seton Karr. [Rulers of India Series.] Oxford: Clarendon Press; New York: Macmillan.

The name of Cornwallis recalls some of the most striking vicissitudes of English history; it is connected with the fortunes of England in two hemispheres, with the setting of her star in the West and its almost simultaneous rise in the East. He commanded the army that surrendered to Lafayette at Yorktown; he was a great administrator in India; he was Viceroy of Ireland during the rebellion of 1798; he concluded the Union with England; and he negotiated the only treaty ever made by England with Napoleon Bonaparte, viz., the Peace of Amiens. As Mr. Seton Karr's book deals chiefly with the "Ruler of India," he is obliged to pass lightly over the very important parts played by Cornwallis in America and Europe; although even in such widely distant spheres of action and politics as India and North America, the events and their consequences are not wholly unconnected. It was the financial embarrassment of the East India Company that induced the English Government to allow direct exportation by the Company to the colonies of the tea that was thrown into Boston harbor in 1773; and undoubtedly it was the loss of her colonies that stimulated

and strengthened England in turning all her energies upon the preservation and extension of her Indian dominions.

Cornwallis held a much stronger position as Governor-General than any of his predecessors in office. He was the friend of the leading English Ministers, and he was backed by the powerful and triumphant Cabinet of William Pitt. His Indian Governor-Generalship represents to the student of Indian history a remarkable period, which Mr. Seton Karr's book does not sketch in sufficiently clear outline. It was during the interval of calm between two great storms, between the end of the American war and the beginning of the desperate contest with revolutionary France, that Cornwallis went to India, in 1786. This quiet time gave him leisure to disable Tippu of Mysore, the only formidable rival to the English in South India, to establish peaceful relations with other native States, and to carry through some very important internal reforms. Of foreign affairs Mr. Seton Karr tells us little, and of the internal reforms he tells us too much; he enters largely upon details concerning land tenures and the assessment of land revenue in Bengal, uses too many outlandish phrases, and describes the legislation whereby the land tax, which before had been variable, was by Cornwallis fixed and made permanent. The measure was undoubtedly successful in contenting the landlords, but unluckily it left the tenants exposed to virtually unlimited rack-renting, and has thus been the source of much subsequent trouble and litigation. There is also a chapter on Sale Laws and Resumptions which we cannot conscientiously recommend to the ordinary reader, seeing that even among experts these questions have in the course of a century become somewhat musty.

Cornwallis left India in 1793, just as the war with France broke out again in Europe. He was succeeded by Lord Mornington, afterwards Marquis Wellesley, who arrived in India imbued with the proud and warlike spirit which then ruled the policy of the English nation. Wellesley's Governor-Generalship was one long period of wars and annexations, insomuch that the English Government, alarmed at so much glory, prevailed upon Cornwallis to go out again, in 1805, with the object of pouring some water into the fiery wine of Lord Wellesley, who had returned home. He found, as Mr. Seton Karr observes, the whole scene transformed, the English dominion immensely expanded, and triumphant armies in the field. He did his best to rein in his ardent generals, and to conciliate the native princes with whom they were fighting, but he was in weak health and advanced in years; the exertion and the climate overpowered him in a few months, and he died at an Indian station in 1806. Mr. Seton Karr says rightly that his life was one of uninterrupted devotion to duty and work; he was a high-minded statesman, who did his country good service, and whose name deserves to be honorably remembered in America as well as in India and in England.

Landscape Gardening. By Samuel Parsons, jr., Superintendent of Parks, New York City. G. P. Putnam's Sons. 1891.

In spite of rich binding, handsome printing, and numerous pictures, this is a disappointing book. The broad title, 'Landscape Gardening,' and the author's distinguished position in command of the parks of New York city, naturally warranted the expectation that America was at last to be provided with an adequate exposition of the principles and practice of a misunderstood art. The fitting of land and landscape to human use and enjoyment in such manner as may be most appropriate and most beautiful in any given spot or region, is certainly artists' work. The professor of this art must be a broad man. He must be as responsive to the intricate loveliness of the wild woods as to the open beauty of the fields. He must be a lover of every type of natural beauty. He must also feel the pathos and the charm which unpretending human life adds to scenery. He must be capable of grasping the fundamental characteristics of every spot and scene, and in working upon landscape he must always be guided by his reverence for the spirit of the place.

If the author of the book before us is such a man, his book does not do him justice. He once refers to the charming simplicity of the Irving place at Sunnyside, where, from the happy union of water, grass, common trees, and a plain house, is evolved a memorable scene; but most of his volume is devoted to glowing descriptions of trees, shrubs, and herbs, and we are told more than once that "every well-planted lawn must have" this or that tree or shrub. The book really treats of little except "lawn-planting," and this subject (which should have given the title to the book) is mistakenly defined as "a simple, harmonious arrangement for the exhibition of individual plants." This is the doctrine which has been preached in the nursery catalogues until the ledges of Bar Harbor and the smooth lawns of Newport display collections of the same conspicuous specimens.

The descriptions of plants, though brief, are generally excellent. The accompanying two hundred pictures are of three kinds: good process prints from negatives, cuts from good and bad ink sketches, and small plant portraits taken from familiar but unacknowledged sources. Following the chapters on plants are a few stray hints on "Small Places," "City Parks," "Churchyards," and "Rookeries." The book is not the well-rounded work of a master in one of the fine arts, but it is full of good sense in ordinary matters, and it will undoubtedly educate the large public which will buy it for its exceedingly handsome appearance.

The New York State Reformatory in Elmira. By Alexander Winter. London: Swan Sonnenschein & Co. 1891.

This book, which appeared simultaneously in England and Germany, is a flattering tribute to the abilities of Mr. Brockway, the Superintendent of the institution which is described. The "benevolent despotism" concerning which Aristotle expressed himself so favorably, seems really to be established at Elmira, and to justify the expectations of the ancient philosopher. Indeed, as we read this account of the system of education pursued and the results attained, it is impossible to suppress a regret that criminals alone are permitted to share in such advantages. But there is an unfortunate antinomy between discipline and liberty, and the scale of rewards and punishments is far more extensive within prison walls than it is without.

The system that has operated with such distinguished success at Elmira is thoroughly scientific. The controlling principle is the incessant presentation of motives to virtuous endeavor. The ultimate motive is, of course, freedom—the release from duress. The subordinate motives are the desires for physical comfort, for knowledge, for improvement in capacity, and for reputation. Every act is so regulated as to suggest these motives. With the temptation to idleness, insubordination, or mischief, there is carefully associated the idea of loss of everything that is desirable. With the ambition to do well is associated the thought of the pleasant results of well-doing. Upon his entrance, the prisoner is placed in the second grade, from which he may rise to the first or fall into the third. A minute system of marking records advance or regression. If the prisoner chooses to exert himself, he receives more palatable food, greater liberty, and more conveniences in his cell, larger privileges in his work and in his recreation, and withal the assurance that he is moving towards freedom. If he refuses to exert himself, a thousand things remind him unpleasantly that he is making his condition worse.

Under these influences, about 35 per cent. of the prisoners begin to improve at once, and proceed without relapse, getting their release on parole within fifteen months. About the same proportion are guilty of occasional backsliding, and do not obtain their liberation so soon by several months, but still within two years. Nineteen per cent. are perverse, and require a year longer—unless they are released by the operation of the law which limits their detention to the maximum period prescribed for their offence. The remainder are the black sheep, who are bad beyond hope of reformation. The average duration of imprisonment is now about twenty-one months.

Apart from this system of general laws, a special study is made by the Superintendent of every prisoner. His whole past history is investigated, and the treatment which is most applicable to his case is determined upon. At any time he may have a personal conversation with the Superintendent, the number applying for such audience being from forty to fifty a day. Many of the prisoners, it is scarcely necessary to say, have never enjoyed the opportunity of consulting a wise and sympathetic adviser, and many affecting instances of their appreciation of this privilege are recorded. It cannot be doubted that numerous cases of spiritual regeneration occur under such influences, and it has been positively ascertained that nearly 80 per cent. of those discharged are reformed, at least to the extent of becoming law-abiding citizens. It is probable that the percentage is as high as 90, but it is impossible, for various reasons, to follow the careers of all the graduates of this institution of learning.

The accounts of the subjects taught and the methods of teaching, of the library and the newspaper, of the technical training, of the physical culture, of the military discipline, and especially of the "Practical Ethics" class, are full and satisfactory. They are extremely interesting, and we should be glad to review them at some length. But as the book is inexpensive, and is really a manual of the scientific treatment of young offenders, we shall discharge our duty to our readers by calling their attention to this opportunity of informing themselves concerning the gratifying progress which has been made in a difficult department of social reform.

The Other Side of the Emin Pasha Relief Expedition. By H. R. Fox Bourne. London: Chatto & Windus. 1891. Pp. x, 202, 8vo.

The motive of this book, as stated in the preface, is excellent and well-timed. Public sentiment needs to be aroused to a recognition of the rights of the African, and to the demand that his life and property shall not wantonly be taken from him in the interests

of science or of political or personal ambition. But instead of carrying out this admirable design, Mr. Fox Bourne has simply made a bitter personal attack upon Mr. Stanley, in which there is evident only an anxiety to make him appear to be an "unscrupulous and vainglorious filibuster," who "preferred quarrelling and stealing" to more honest methods of dealing with the natives. This eagerness, joined possibly with ignorance, has led him to absurd lengths, Mr. Stanley's whole course being assumed to have been a succession of blunders and crimes. He studiously belittles the undoubted philanthropic intent of the expedition, which he terms "an ill-managed slave-gang," in order to give prominence to the statement that it was mainly designed to carry out certain ambitious projects of King Leopold and the British East African Company. He asserts that, before Stanley Pool was reached, the leader "had deservedly lost all the respect of his white colleagues, and had forced them to treat with systematic cruelty the black men under them." Mr. Stanley is apparently blamed for having taken one hundred and sixty-five days to cross the frightful forest instead of fifty, as he had expected. His fear lest he should be too late to rescue Emin, which was the sufficient cause for his forcing his way instead of delaying to negotiate with the hostile natives, is ignored, and he is charged with "morally indefensible" conduct, as well as with "foolish and dishonest waste" of ammunition. He also "contributed" notably to the ruin of the Equatorial Province, whose Governor he "led as a captive from the Albert Nyanza to Bagamoyo."

It is of course impossible for us to show in detail how weak is the basis of truth upon which these confident assertions rest, and an examination of his closing statement must suffice to demonstrate the thoroughly partisan character of Mr. Fox Bourne's attempt to give the "other side." "We are not told," he says, "and evidently Mr. Stanley himself neither knows nor cares, how many thousands of slaughtered natives should be added to the 311 dead Zanzibaris, Sudanese, and Somalis, to make up the huge total of mortality incident to the methods and the exploits of the Emin Relief Expedition." The impression is given here that the mortality was phenomenally great. The "thousands of slaughtered natives" may be set aside as the wildest exaggeration, as far from the truth as the gratuitous assumption that Mr. Stanley was indifferent to their fate. Every one familiar with the history of African expeditions knows that a loss of 311 (nearly half of whom, it should be remembered, rotted to death at Yambuya) out of 693 ignorant and childlike Africans, considering the length of time, almost three years, of the expedition, the immense distances traversed, through regions devastated by slave-hunters, and peopled by men mad with fear at the sight of strangers, was, in fact, relatively very small. We do not hesitate to say that Gen. Gordon, whom Mr. Fox Bourne will not accuse of indifference to the negro, for a purely scientific purpose, probably sacrificed in a single year more men than Mr. Stanley lost in three years, including all natives slain, in his attempt to aid Emin Pasha. The occasion was the transport of a steamer a distance of 100 miles about the cataracts of the upper Nile simply for the exploration of the Albert Nyanza. It was a very difficult task, but Gordon's sole comment in his Diary on its completion was, "It has really been a terrible year." Dr. Junker, however, who was then in the country whence the most of the carriers were taken, says that 500 of these unfortunate creatures "were reported to have succumbed to the tremendous efforts they had been called upon to make. The very air was said to have been tainted by the dead bodies left lying along the route, which Maj. Prout had consequently to avoid when coming down from Magungo." Mr. Fox Bourne makes a sneering reference to Mr. Stanley's thankfulness at having meat from a cow taken in one of their combats, the first which he had tasted for eleven months. But Gen. Gordon began his transport operations by sending out an expedition against the hostile natives which brought in 2,000 cows, occasioning an incalculable amount of misery to an innocent people, whose only crime was that they preferred independence to the Egyptian yoke. The truth is, that one of Mr. Stanley's greatest merits, shown upon this expedition as well as throughout his career as an explorer, is his scrupulous care for his men. His indignation at the sufferings which the rear column experienced—needlessly, in his opinion—was in fact the main cause of his, in some respects, hasty and ungenerous attacks upon its unfortunate officers.

The account of Emin Pasha and his work in the Equatorial Province is as much too favorable as the judgment of Mr. Stanley is too harsh. It is difficult to believe that the author has read any other than the highly colored statements which first aroused the enthusiasm of Europe for his rescue. There can be little doubt, however, from Jephson's testimony, confirmed, as it is, in every important particular by Casati, that the boasted civilization introduced by Emin was a mere veneer confined to a few stations on the river. The rule of the Turks, as the Egyptians are called, was rightfully detested by the wretched natives whom they misgoverned, and who very likely welcomed the "oppression of Mahdist fanatics" to which Mr. Fox Bourne says the Relief Expedition consigned them. We have had occasion more than once to condemn Mr. Stanley for what has seemed to us his injustice to some of his companions, but we have neither sympathy for nor patience with such wholesale and reckless condemnation as is contained in this ill-advised and ill-tempered book.

Forty Years in a Moorland Parish. By the Rev. J. C. Atkinson, D C.L. Macmillan & Co. 1891. 8vo, pp. xi., 457.

THE author of this singularly interesting book has been for nearly forty-five years incumbent of the parish of Danby in Cleveland (Yorkshire, England), and in the preface says that he must have walked more than 70,000 miles in the prosecution of his clerical work only, and much more than as many again for exercise, relaxation, or recreation. What a profound knowledge of his parish and parishioners this long residence and constant locomotion gave him can be easily seen from the pages of his work, which is nothing less than an almost exhaustive monograph upon a typical English parish. Nearly every feature of its life and inanimate nature is described with the sure and interesting touch of a trained and loving observer. The superstitions, manners, and customs of the people, the antiquities and history, both natural and political, of the parish are treated in a series of desultory but delightful papers, illustrated with excellent maps and a few cuts.

As may be inferred fron the above rough statement of the contents, the book is of peculiar value to the student of folk-lore and of English history (especially of the earlier period); while the philologist will find here and there many quaint phrases to be added to the author's well-known 'Glossary of the Cleveland Dialect.' Most interesting survivals of beliefs in fairies and witches are noted in these pages, and the wedding customs still retain some traces of the primitive bridal by capture. Many curious harvest customs are still in vogue, and assume a new interest when read in connection with such a work as Fraser's 'Golden Bough.' Mr. Atkinson has left no side of his parish uninvestigated, and gives interesting accounts of his barrow-digging and its results, while incidentally demolishing the theory of the British villages so called, which seem to be, after all, only old mining pits. We cannot do more than refer to the valuable light that the author throws upon the questions of village communities and division of land, and to say in conclusion that the general reader will find much that is attractive in the introductory general description of the parish and its aspects in winter, with blizzards not inferior in terror to those of our own Northwest.

The Colors of Animals: Their Meaning and Use, especially considered in the case of Insects. By Edward Bagnall Poulton. D. Appleton & Co. 1890. Ill. 8vo, pp. xiii, 360.

"IN view of this public mention of my name, I may perhaps be excused for making the personal statement that any scientific work I have had the opportunity of doing has been inspired by one firm purpose—the desire to support, in however small a degree, and to illustrate by new examples, those great principles which we owe to the life and writings of Charles Darwin, and especially the preëminent principle of Natural Selection." This is our author's protest against being called "an industrious young observer who is accumulating facts telling with more or less force against pure Darwinism." It prepares one for a personal equation not to be ignored in estimating his work. He is one of a group of eminent English scientists who advocate natural selection as "the one solid foundation on which evolution rests." From their point of view the book is a very good presentation of the special evidence to which it is limited. The field is thoroughly canvassed, everything that might be used in support of the position has been culled, and the author has added much from his own observation and discussion. That evidence selected on account of its bearings and carefully explained should be heartily welcomed by an opponent, is something not wholly agreeable to a partisan. It is easy to see whence Mr. Poulton's critics derive aid and comfort. His views are so extreme that their demands for support are too great, and an ever patent desire to see things favorable to his belief does not enhance the value of the observations. Consequently, the claims are not always well supported, and much of the evidence brought forward is quite as serviceable in the hands of opponents.

In the whole, so many of the so-called facts are taken at second hand, unverified, and full of prejudice, that the work would have been greatly strengthened by cutting down one-half. There is little force in paragraphs like the following: "Mr. A. C. Billups of Niagara, Ontario, tells me that during an exceptionally mild winter, about seven or eight years ago, neither the 'snow bird' nor the American Hare acquired the winter dress. Hence the power of Variable Resemblance appears to be possessed by certain birds." An explanation of selective action in which a number of slow-running dogs and not very swift hares are

placed on an island where there is food for hares but none for dogs, becomes ridiculous when practically considered: the slower dogs are to starve, the swifter ones to catch the slower hares, thus selecting the swifter of both dogs and hares. In practice the slow dog would catch the quarry tired out by the swift one, and each would do what he might to exterminate the hares by catching the young and the gravid females. Mimicry, protective and aggressive, is illustrated by certain British caterpillars, with large eye-like spots, said to mimic a cobra-like serpent which "inspires alarm by the large eye-like 'spectacles' upon the dilated hood, and thus offers an appropriate model for the swollen anterior end of the caterpillar with its terrifying markings. It is extremely interesting that the caterpillar should thus mimic a feature which is only deceptive in the snake itself." How much better this would be if it were proved that the marks on the cobra were really terrifying, and not beneficial by exciting curiosity in the prey; if British animals were shown to be familiar with the danger lurking in this snake of Southern Asia; and if the marks were only in front of the cobra when it assumes its terrifying attitude instead of behind it.

These are small matters, certainly, but they are samples of many illustrations and much reasoning, no doubt carefully selected. While the book, as compared with others of similar bias in theory, is really a very good one, we can hardly believe the author would not himself be surprised at the number of times he uses "probable," "probably," etc.; at the amount of dependence on positive guesswork. "All animal colors must have been originally non-significant, for although selective agencies have found manifold uses for color, this fact can never have accounted for its first appearance." This must mean non-significant so far as proof of selection is concerned, for there is no proof that color was not from its inception of value to the organism. The statement itself is a confession of weakness concerning causes. If our author had gone a little further and stated that, after first appearance and establishment, selection might or might not have asserted itself, as circumstances were favorable or otherwise, there would be less question of the solidity of the foundation. As regards origin, his is the fortuitous theory of Darwin; to which is opposed that which recognizes the agency of stress of circumstances (climate, food, habits, or whatever) through action and reaction, or through effort, conscious or unconscious, in inducing hereditary tendencies of variation, affecting numbers or all of the individuals of a group, and establishing changes for present adaptation regardless of ultimate fate.

The classification submits for approval a number of new names that may be frequently met with in future Darwinian literature. There are great possibilities of research and of discussion in determining whether a color is cryptic, procryptic, anticryptic, or allocryptic, Apatetic, Epigamic, or Sematic; or, with greater nicety, whether it is aposematic, pseudaposematic, episematic, pseudepisematic, or only allosematic, or pseudallosematic. Applying the prefixes apo, pseudo, epi, allo, pro, and anti to each of the terms completes a range of expression that leaves no reason for lack of exactitude, unless it should be in the color itself. The scheme is based on selected examples, in which the distinctions are more or less apparent. The terminology is especially convenient for the adaptation seeker, and may in common use be made to cover a great deal of what is not known.

The Tertiary Insects of North America. By Samuel H. Scudder. Vol. XIII of the U. S. Geological Survey. Washington.

THIS is a solid quarto of 734 pages and 28 plates. An idea of its extent may be obtained from the fact that it contains descriptions of 612 species of fossil insects, viz.: 23 Hymenoptera, 1 Lepidopteron, 79 Diptera, 112 Coleoptera, 266 Hemiptera, 30 Orthoptera, 66 Neuroptera, 34 Arachnida, and 1 Myriapod. The volume is invaluable as a basis for future determinations and comparisons. The author found his field rich beyond what was deemed possible, yet indicating that we are only on the threshold of our possible knowledge. The greater part of his material was drawn from the Florissant beds of Colorado, just east of South Park, from a horizon situate in or near the Oligocene, in shales that had been deposited in shallow lakes of fresh water when the climate of the region was similar to that now affecting the middle belt of the Southern States. The recent affinities of the insects, however, pointed towards Central America. The specimens were secured from shales containing multitudes of fishes, leaves, twigs, fruits, and other remains. Our author rightfully concludes that the idea of Prof. Lesquereux, of an annual drying up of the lake at the time of deposition, is not tenable. Mr. Scudder says:

"The thickness of the paper shales upon which most of the fossil remains are found, and which are composed of uniform layers of triturated flakes of volcanic products, being necessarily the result of long-continued action of water, excludes the idea. The structure of the rocks rather indicates a quiet deposition of the materials in an unruffled lake through long periods, interrupted at intervals by the influx of new lava-flows or the burying of the bottom sediments beneath heavy showers of volcanic ashes."

In this we do not think the author ascribes enough to the agency of the winds. Our own conclusions in regard to the mode of origin of similar shales have been to the effect that a heavy wind had carried the insects, twigs, leaves, etc., out upon the lake, and at the same time filled the water with dust to settle and form a layer of the shale. The heavier matter, descending first, thus rested on the lighter of a preceding storm, and the differences in the material separated the lamina, the varying thicknesses of which were possibly determined by the violence and duration of the winds.

BOOKS OF THE WEEK.

Arnold-Foster, H. O. In a Conning-Tower. Cassell & Co.

LIFE OF
Jane Welsh Carlyle.
By Mrs. ALEXANDER IRELAND.
8vo, 330 pages. Portrait.

The publication of this book is a literary event. It is a remarkable biography of a wonderful woman, written and compiled from materials never before made public. The powerful side light it throws upon the life and character of Thomas Carlyle will make the volume indispensable to all who venerate the genius, or are interested in the personality, of the Sage of Chelsea.

Vellum cloth (half bound), gilt top, $1.75.

Postpaid on receipt of price.

CHAS. L. WEBSTER & CO.,

Exhaustion.

HORSFORD'S
ACID PHOSPHATE.

The phosphates of the system are consumed with every effort, and exhaustion usually indicates a lack of supply. The Acid Phosphate supplies the phosphates, thereby relieving exhaustion and increasing the capacity for labor. Pleasant to the taste.

Dr. A. N. KROUT, Van Wert, O., says: "Decidedly beneficial in nervous exhaustion."

Dr. S. T. NEWMAN, St. Louis, Mo., says:

"A remedy of great service in many forms of exhaustion."

Descriptive pamphlet free.

Rumford Chemical Works, Providence, R. I.

Beware of Substitutes and Imitations.

CAUTION: Be sure the word "Horsford's" is printed on the label. All others are spurious. Never sold in bulk.

The Truth about Emin Pasha and Mr. Stanley.

Now Ready, 8vo, cloth, 600 pages, Price, $6.00.

New Light On Dark Africa

BEING THE NARRATIVE OF

The German Emin Pasha Expedition,

Its Journeyings and Adventures among the Native Tribes of Eastern Equatorial Africa, the Gallas, Massais, Wasakuma, etc., on the Lake Baringo, and the Victoria Nyanza,

BY

DR. CARL PETERS,

The Commander of the Expedition,

Translated by H. W. Dulcken, Ph.D.

Profusely and Beautifully Illustrated

WITH

Thirty-two Original Full-Page Plates,

And Sixty-five other Engravings by RUDOLF HELLGREWE

(From Sketches and Photographs taken on the spot),

TOGETHER WITH

A Large Explanatory Colored Map,

Representing the Progress of the Expedition day by day.

From THE TIMES (London):

"Dr. Peters has distinctly added to our knowledge of the Upper Tana and of the Chagga country; while all along he gives us many interesting sketches of the aspect of the region through which he passed, forming a welcome addition to our existing knowledge. . . . Dr. Peters indeed writes well and vigorously throughout; the book is one of the most readable and instructive of the long drawn out cycles of Emin Pasha literature. . . . The book is readable throughout. . . . A narrative full of interesting incident and fresh information."

WARD, LOCK & CO.,

London, New York, and Melbourne.

Exhaustion

HORSFORD'S ACID PHOSPHATE.

The phosphates of the system are consumed with every effort, and exhaustion usually indicates a lack of supply. The Acid Phosphate supplies the phosphates, thereby relieving exhaustion and increasing the capacity for labor. Pleasant to the taste.

Dr. A. N. KROUT, Van Wert, O., says: "Decidedly beneficial in nervous exhaustion."

Dr. S. T. NEWMAN, St. Louis, Mo, says: "A remedy of great service in many forms of exhaustion."

Descriptive pamphlet free.

Rumford Chemical Works, Providence, R. I.

Beware of Substitutes and Imitations.

CAUTION: Be sure the word "Horsford's" is printed on the label. All others are spurious. Never sold in bulk.

The Nation.

NEW YORK, THURSDAY, JULY 30, 1891.

The Week.

THE reluctance of French manufacturers to take part in the World's Fair at Chicago, of which we have abundant evidence in the reports of the Chambers of Commerce, is due to the bad feeling created by the McKinley Bill, and to the belief entertained that any expense incurred in exhibiting goods would be lost by reason of the commercial restrictions which that measure was intended to create and has created. Nobody cares to spend his money for mere purposes of show. Unless trade follows as a consequence of the exhibition, the money will be sunk. It is very easy to say to France, "You're another," and to point to the prohibition of American pork and to the high protective duties that France maintains against us and against other countries. It does not advance matters, or help on the Fair, to show that both countries are wedded to a false system. It should serve, however, to open the eyes of people on both sides to the absurdity of inviting each other to show their goods and then creating barriers to prevent each other from buying and selling. Imagine an American McKinleyite meeting his French brother at a World's Fair in Paris or in Chicago, and exhibiting to the latter a choice lot of provisions put up in Mr. Armour's most approved style, while the latter exhibits a fine assortment of woollens, silks, gloves, etc. If they could look in each other's faces without laughing, they must have a gravity exceeding that of two Roman augurs. Ordinary self-respect ought to teach the commercial classes of both countries to keep away from World's Fairs until they learn the A B C's of trade.

The Canadian newspaper *Hardware*, published at Toronto, has an editorial article, under date of July 18, discussing the reasons why American pig lead is sold in Montreal at $3.60 to $3.75 per cwt., while the price of the same article in New York is $4.40 to $4.45. It relates the experience of a Canadian buyer in New York, who asked the price of pig lead of a firm of metal-dealers, and received the answer, $4.40. The Montrealer replied, "I will sell you American lead in Montreal at $3.75 as an outside figure"; and he added, "You could have knocked them down with a feather." The reason why American lead is sold to foreigners cheaper than to Americans is that we have a precious tariff for the protection of home industry which puts a duty of two cents per pound on pig lead. This enables the producers to charge the American consumer more for it than they could otherwise get; so of course they can afford to sell to Canadians for less. It is all very simple. The same thing is done with hundreds of other articles.

The London *Economist* is of the opinion that no large part of the gold exported from the United States to Europe this year will be returned this fall, even though the balance of trade may seem to require it. The reason why it holds this opinion is that it is not needed here. The circulation is filling up with silver certificates at the rate of 4½ millions per month. These will go a great way to relieve the autumnal pressure for money to move the crops, which pressure, although felt first in New York, would otherwise fall upon London and Paris. The apprehension felt here that, under the operation of the 4½-million law, we are drifting to a silver basis, the *Economist* thinks not altogether groundless. Its discussion of our financial situation, while marked with its customary intelligence and discrimination, leaves something to be desired. If Europe takes an unusual quantity of our breadstuffs this fall, and at higher prices than usual, how will she pay for it? It may be said that she will pay in the things that America particularly wants, and that America does not particularly want gold, since she allows silver to take the place of it in her domestic economy. That would be a fair answer, yet the *Economist* refrains from pursuing the subject to a conclusion, and says instead that "it is impossible to say in advance exactly what course affairs may take." It is, indeed, hazardous to make a prediction, yet all the signs point to the working of Gresham's law, that when two kinds of money are in use on equal terms, the poorer will drive the better out of circulation. Gold and silver are not on exactly equal terms as yet, but the 4½-million law, and the crusade of the free-coinage party together, have produced a situation uncomfortably near that which permits the operation of that law.

The employment of convicts under contract with private persons is upon many accounts objectionable, although many of the objections most commonly urged against it are of a kind that imply that convicts ought not to work at all. So far as the nature of the employment is concerned, it is difficult to understand why any free laborer should desire to prevent convicts from doing all the mining that there is to be done; but the employment of convicts and free laborers together is a practice that is entirely indefensible upon any ground whatever, and the furnishing of convict laborers to contractors, to be used by them in the place of striking miners, is, to say the least, injudicious. As we understand the matter, both these mistakes have been committed in Tennessee, and the outbreak at Briceville seems to be directly due to them. Still, it will do no harm to remember that within ten years, no farther away than the neighboring city of Brooklyn, contractors were employing male convicts and female free laborers in the same shops and on the same benches.

The peaceful ending of the trouble between the Tennessee miners and the State Government is upon the whole creditable to both parties. The Government will enforce the objectionable law, but it is understood that an extra session of the Legislature is to be called at which the repeal of the law will take place, the miners thus obtaining eventually all that they have claimed. It is impossible not to regret that so large a body of citizens should feel it incumbent upon themselves to unite in nullifying the action of the constituted authorities, but it must be admitted that they have behaved with the greatest sobriety and self-restraint, and they belong to a class that has always been in the habit of taking the law into its own hands. Even if they have practically won the victory, they have done so by an apparent surrender to the Government, so that it cannot be said that the majesty of the law has been altogether contemned. At all events, if we compare the events that have just taken place in East Tennessee with those that occurred at Pittsburgh in 1877, the contrast is a decidedly agreeable one. There is every indication that episodes of this description are to be more frequent in the future than they have been in the past. Whether there is more disposition to violate law than formerly perhaps cannot be told, but there is certainly far more sympathy extended to law-breakers when they profess to represent an oppressed class, and there is a timidity on the part of governments that is almost a new phenomenon in history.

A statement was made on Friday before the Philadelphia Councils' Committee by R. J. Cook, business manager of the Philadelphia *Press*, in regard to the 40 per cent. rebate paid by the *Press* to Bardsley's agent for city advertising. The statement is an extraordinary one. The manager of the *Press* solicited this advertising from the Auditor-General. There was an indefinite reply. A man soon after called at the *Press* office with an offer to give the paper the advertising if it would make a rebate of 40 per cent. This the paper did, and it did it in this way: The *Press* made out a bill for the whole amount against the city, which Bardsley receipted for. Then it paid back the 40 per cent. to the "striker," leaving the impression from the city's voucher that the *Press* had received the whole amount. Pressed for the name of this "striker," Cook at first refused to give it, and then named an employee of the Auditor-General's office now dead. He declared that he did not know that this man was an office-holder, although it was brought out that he had served a long time.

The *Press* paid rebates to this office-holder's successor, but Cook absolutely refused to give this man's name to the Committee, on the ground that "it might do harm to the living." Finally, when asked if he thought the publication of this particular advertisement (which the *Press* had asked for) did any public good, Cook replied: "I think it has been a fraud from the beginning." The *Press* is one of the papers that find most to admire in Wanamaker.

There seems to be a growth of public sentiment against prohibition in Maine. Certainly there is a more pronounced and sincere tone in the protests against the policy uttered by men of character and standing now than ever before. Especially notable is a deliverance on the subject from the Maine Pharmaceutical Society at its annual meeting in Portland last week, through the address of Mr. C. K. Partridge, its President. He began by pointing out that, under the prohibitory law, if the apothecary fills the prescription of a physician for alcoholic stimulants, "his legal place of residence is the county jail, and, in addition thereto, his pocketbook should be legally mulcted in a handsome sum." As to the general policy of prohibition and its effects, Mr. Partridge said:

"Such prohibition, after nearly half a century's trial in Maine, has proved a moral, political, demi-religious fraud. Originally enacted from the best of motives, as a 'sovereign remedy' for intemperance, its empiricism has been fully demonstrated. It has grown, like a fungus, on the body politic, stimulated by a combination of dark-lantern societies with demagogy, fanaticism, political intimidation, and intolerance of individual rights. It has shown total inadequacy for its avowed purpose of promoting real temperance and good morals. It is at the root of many evils—in its train are hypocrisy, perjury, fanaticism, growing disrespect for all laws, secret dram-drinking, and a host of minor ills. It is a miscarried effort to 'legislate the Kingdom of God into the heart of man by indirection,' inasmuch as it places an act not a crime of itself in the same category with the worst crimes."

Among other things Mr. Partridge said: "A literal and impartial enforcement of the present statutes of prohibition, could such be made throughout the State, would demonstrate the internal weakness of these laws, and result in purging the prohibitory amendment from the Constitution; but such a course has hitherto been impracticable, for officers appointed to enforce the lower law of prohibition have generally been found to have some regard for the higher law of humanity." By a curious coincidence, Gov. Burleigh sent a communication to the Sheriff of Aroostook County, on the same day that this address was delivered in Portland, which fully sustains the position here taken. The Governor calls the Sheriff's attention to complaints that have been made that the prohibitory laws are not being properly enforced, says that it is the plain and imperative duty of every officer charged with the enforcement of these laws to see that they are administered according to their spirit and intent, and intimates that, if more efficiency is not shown, special constables will be appointed. This is precisely the experience through which Massachusetts went before it abolished prohibition. As the local sentiment of the various counties would not sustain the law, an attempt was made to enforce it through a State constabulary, but this proved even a worse failure than the other, and it was finally concluded that there was no use in trying by any device to maintain a law which the people did not sustain. Mr. Partridge evidently believes that this will be the result in Maine.

The announcement is made that the inhabitants of Kansas City are about to be supplied with cool air in summer and warm air in winter through a system of pipes laid in the streets. At the same time we are informed that the people of Framingham, Mass., are to be furnished with gas for heating purposes at the price of 50 cents a thousand feet. Thus the ends of the land are advancing in the art of living while the metropolis remains stationary and is kept from falling behind only by incessant grumbling. And yet the possibilities of comfort, of health, and even of cheapness revealed in these schemes are wonderfully alluring, and their realization would be prevented by no physical obstacles. If we consider that wonderful work of human hands, the kitchen range, under the management of the regular cook, who knows how to put on all the draught at once and keep it on, what a devourer of fuel it is! We need a cup of tea or a chop in summer, and a fire is kindled that would generate steam enough to drive an ocean racer a mile upon her course, the kitchen is turned into a Tophet, the miserable servants swelter in the apartments which their own stupidity and that of mankind have rendered uninhabitable, and their employers are rendered uncomfortable above. The extravagance of the Chinese, who, as related by Charles Lamb, at first thought it necessary to burn down a house whenever they wanted to roast a pig, is nothing to ours. In place of all these trials, heating gas is now supplied to those who have the wit to use it and the enterprise to supply themselves with gas ranges, which can be lighted and extinguished in a moment.

The late Hannibal Hamlin used often to comment upon the change which he had witnessed in the popular estimation of old age. When he was young, he said, it was the custom to regard a man as old and ready for retirement when he had passed fifty, whereas he lived to see the time when nobody was surprised at a man's keeping hard at work after reaching seventy. An illustration of this fact has just been furnished in Chicago. In 1870, Mr. Henry W. Blodgett was appointed Judge of the United States District Court for the Northern District of Illinois. Last week he reached the age of seventy. The law provides that a Federal judge who reaches that age after having served ten years on the bench may retire upon a pension equal to his salary, and Mr. Blodgett has been asked whether he intended to avail himself of the privilege. He replies that he does not; his health is good, he feels perfectly competent to keep at work, and he has grown so used to work that he should not know how to get along without it. Judge Blodgett is by no means singular in this preference. Two of the nine judges of the United States Supreme Court (Bradley and Field) are far past seventy, and might have retired on pensions long ago; Judge Miller was well advanced in his seventy-fifth year at his death; and Judge Blatchford was seventy last year.

There was an exciting and characteristic scene in the French Chamber when the duty on cotton yarn was voted. It was very much like some scenes in our own Congress when tariff men have a misunderstanding in public about the division of the spoils. The French cotton-spinners wanted a heavy duty on yarn, and their representatives declared roundly that if it was not granted, they would kick the whole bill to perdition. The weavers protested against the duty, saying that they could hardly keep their heads above water now, and that if they had to pay a higher price for yarn, they should be ruined. There was no McKinley present to tell them that the proposed duty on yarn would make the price lower. M. Méline, the champion of the bill, reproached the weavers for opposing the duty on yarn after they had secured duties on cloth which were really higher than there was any need of! The Chamber voted for the increased duty by 277 to 242, and immediately afterwards, by way of compromise, voted to admit yarns free when used in the manufacture of goods for export. Then M. Méline indignantly moved that the entire article relating to cotton yarns be rejected, and this motion was carried by 358 to 151. Then M. Delafosse, the representative of the cotton-spinners, declared that he would vote against every other section of the bill that carried an increase of duty and would vote against the whole bill on its final passage. The scene was happily contrived to illustrate the system which Bastiat called "progress by robbery." It is a pity that somebody had not risen and read that particular chapter of the French economist which shows how a certain people appointed a committee to assign sections of road to particular persons and classes, giving them the exclusive right to take purses on their own divisions, subject to the risk of being themselves robbed whenever they travelled beyond their proper precincts.

The fear expressed by French writers and artists, in their remonstrance against the policy of commercial isolation upon which their country is entering, that retaliatory legislation might take the form of withdrawing the guarantees of literary and artistic property now accorded them in other lands, appears at first sight to be justified by

the announcement that both Belgium and Switzerland have given notice of their desire to terminate their treaties with France covering the rights of authors and artists. But this step is far from being conclusive, even in the case of those two countries. Each of them has a domestic law practically assuring foreign writers the same rights as native, and this legislation would have to be repealed in order to make the termination of the treaties really effective. Even in that case, there would still remain the Berne Convention, to which Belgium and Switzerland adhere, and which gives the citizen of any signatory Power the same rights in any other as those of its own subjects. This international agreement would also have to be thrown over, therefore, and it is altogether unlikely that either Belgium or Switzerland would think of doing it and joining the ranks of the barbarians again. Thus it would seem that, whatever forms of reprisal French protective legislation may provoke, the property rights of the literary and artistic producers of France are to remain well secured abroad. In fact, they are all the while being extended. The recent Franco-Brazilian treaty is a highly important one for French interests, and is to be followed by others with Spanish-American republics; there are already treaties with Bolivia, Ecuador, and Mexico. Then, too, France has just entered into the benefits of our own new law, such as they are, and is on the point, so it is reported, of concluding a treaty for the protection of literary property with Russia.

The Portuguese Minister of Finance hopes to find a way out of the severe difficulties that confront him by negotiating reciprocity treaties with South American countries, and so making Lisbon a depot of distribution for Europe. This is the latest attempt to conduct international trade on the basis of sentiment rather than profit. Both Spain and Portugal are unable to get it into their heads that their ancient connection with South America does not give them a vast advantage in their efforts to secure a greater share in South American commerce. A great association for the promotion of better trade relations between Spain and her ancient dependencies has recently been formed in the commercial cities of the Peninsula, and there have been banquets, and fervent messages to "our sisters in the New World," and a general sentimental overflow. The Spanish newspapers predict important results from the movement, and draw affecting pictures of the South American exporters turning their backs on alien German and English traders, and falling upon the necks of the shipmasters of Barcelona and Cadiz. The funniest part of it is, that the South Americans warmly reciprocate these advances, as far as talk goes, though they keep on buying and selling as before. When all is said, however, we ourselves have been as ridiculous as any of them in much of the talk that has been current among our public men. It has been set down as an axiom that trade has a sentimental desire to "follow the flag," and that if we can only make the South Americans think we are jolly good fellows, they will buy our goods without being too particular as to price. The Spanish and Portuguese contention that trade will follow common language and inheritance is just as strong on *a-priori* grounds, and also just as badly supported by facts.

The newly elected Brazilian Congress began its sessions on June 15, and is giving the believers in the inevitable congestion and inefficiency of representative assemblies plenty of comfort. At least, the first ten days were marked by an overwhelming flood of private bills and, in the Senate particularly, by a breaking up into fiercely personal and factional cliques. All this, it should be remembered, is in the face, and to the neglect, so far, of the vast amount of the most urgent public business demanding the attention of the Congress. The new Constitution remains practically suspended in the air, for lack of the proper laws putting it in force in its various spheres. The municipal government of Rio Janeiro is actually devoid of legal existence and is clamoring for recognition and reorganization. The criminal law is in pressing need of codification. In short, there is an abundance of subjects of the gravest public concern which ought to receive immediate consideration, and it is certainly discouraging to note the way they are made to defer to private interests.

A kindred weakness of parliamentary government was conspicuously displayed by the Spanish Cortes during the last few weeks prior to adjournment. In that case an irresistible outbreak of oratory brought the public business to an absolute standstill, and left the Administration with its most important bills completely stranded. First came a full week of orations about a crime over which Madrid was agog, but with which the Cortes had not a thing to do directly. Then came up the Cuban budget, and for ten days the declamation beat upon the "blue benches." The Government begged for a respite, offering night sessions for the relief of the bursting orators, but all would not do; the tireless Cubans talked the session to death, and the new fiscal year came in with the budget, both for Spain and the colonies, not voted. The only tangible thing in the whole debate was the declaration of the Premier that Spain would spend her last cent and send her last fighting man to death before giving up Cuba, while, at the same time, he made the significant admission that the treaty with the United States could be secured only by some sacrifice on the part of Spanish interests.

President Pellegrini of the Argentine Republic writes a very long and diffuse letter in reply to a communication received by him from the Chamber of Commerce. He declares that the expenses of the Government have been greatly lessened in numerous ways. The interest on the public debt is no longer paid, except that upon one loan which was secured upon the customs receipts; the construction of new railways has been stopped; nothing is being done toward the completion of the public works, with the exception of some expenditures necessary to preserve them from destruction, and 1,500 public officers have been discharged within the last few months. He refuses to concede any reduction of import duties or of railway tariffs, and suggests the formation of a new bank "with fresh capital to regulate the circulation, to reëstablish credit, and to put in motion commerce and industry." But, he observes, capital is not forthcoming for this enterprise. It is not reassuring to have the President suggest more banks as a means of relief from the trouble. But if it be true that as against importations of $55,000,000 there will be exports amounting to $130,000,000 or $140,000,000 during the current year, the situation is certainly hopeful. We fear, however, that this view is too sanguine.

The accounts from China of the riots now prevailing in the Empire seem to reflect the ignorance and uncertainty in which even the best-informed foreign residents are left. A correspondent writes us, under date of June 25, that it is precisely "the old China hand" who is most hesitant in advancing a theory as to the cause of the disturbances. As far as obtaining information from native sources is concerned, the difficulty is to break through the mask of official falsehood and to discriminate between ignorant or obsequious and intelligent and honest informants. The various hypothetical explanations of the riots are given as follows by our correspondent: "Hatred of foreigners in general; hatred of missionaries; hatred of the Peking Government; hatred of the Viceroy of Nanking; the machinations of the *Kolao Hin*, a secret society originally a military benevolent organization, but now political and revolutionary." He adds: "It is probable that all the foregoing causes have been operative, but it is the belief of the best informed that the immediate cause of the riots is to be found in hostility to the new Viceroy of Nanking, on account of his retrenchments in the matter of pensions to the soldiers of the imperial forces disbanded at the close of the Taiping rebellion; that these disaffected soldiers are for the most part members of the *Kolao Hin*, and that their leaders have taken advantage of the popular hatred of missionaries, and, to a much less extent, of foreigners in general, to provoke riots with the ultimate purpose of embarrassing the Viceroy, and possibly embroiling the Chinese Government with other nations. At all events, the Viceroy proceeded on the hypothesis that the *Kolao Hin* was the moving cause of the riots, and issued a strong proclamation against it."

FORAKER AS A TYPE.

The most noteworthy feature of the Ohio canvass is the reappearance of Foraker as the chief man in the Republican party. When he was beaten for reëlection to the Governorship two years ago by more than 10,000 votes, on the same day that all his associate candidates on the Republican ticket were successful by pluralities running up as high as 4,400 votes, it was taken for granted that his political career was over. During the campaign which culminated in this defeat, he had brought out what proved to be a forged paper purporting to be a contract by which Mr. James E. Campbell, a member of Congress and the Democratic candidate for the Governorship, Senator Sherman and Congressmen McKinley and Butterworth had agreed to use their influence to secure the adoption by Congress of a patent ballot-box, in return for which they were to receive a share of the expected profits. In other words, the Republican Senator from Ohio and the two most prominent Republican Representatives were represented as conspiring with a Democratic Representative to push through a shameless job for pay, and Foraker made the charge public without having asked any one of his three party associates whether there might not be some mistake about it. The document was proved to be a forgery as soon as it was made public, and the indignation at Foraker's conduct in the affair was so widespread that he alone of all the Republican candidates on the State ticket was defeated, and, it was generally supposed, politically buried.

Within two years, however, he is back again, virtually in control of the party organization. At the Republican State Convention he was the hero of the day; he refused to allow Sherman either the chairmanship of the body or the compliment of a personal endorsement in the platform; he has since required McKinley to put Foraker men in charge of the gubernatorial canvass; and he has now practically announced that he means to take the Senatorship if he can get it. What is more important, he evidentdently controls the Machine so completely that he seems likely to succeed in his purpose if the Republicans carry the Legislature and so have a Senatorship to dispose of.

The reappearance of Foraker as the Republican leader in Ohio is, at first thought, calculated to surprise the observer. One is inclined to wonder what there is in the political atmosphere of Ohio which revives such a man after he had seemed to be dead. It appears natural to suppose that there must be some peculiarity of environment to account for so extraordinary a phenomenon. The outsider finds himself speculating as to what local influences may be at work in the commonwealth to breed such politicians. But the truth is, that all such speculation is aside from the mark. Foraker is again a Republican leader, not because he chances to live in Ohio, but because he is the sort of man the Republican party of the nation now honors everywhere. A skilful political manager, he understands how to "run the machine," and is popular with the "hustlers" who attend to the caucuses and see that the conventions are made up of the right sort of men. He is a master of that clap-trap oratory of the stump which exhausts itself in abuse of the "rebels" and condemnation of "free trade" as a Confederate notion. He is "down on" the Mugwumps, and despises civil-service reform as a fad of the "doctrinaires." In short, he is the sort of leader whom the "boys" know that they can depend upon to look out for them, and the party workers are therefore enthusiastic for him.

The leader of the Republican party of Ohio in its early history was Salmon P. Chase. It is not necessary to trace in detail the contrast between Chase as he was in his best days and Foraker. There were men of the Foraker sort at that time, as there have always been, but they were not prominent in the Republican organization. There were two reasons for this. In the first place, the party represented great principles then, and great principles develop great men—such men as Chase in Ohio, Seward in New York, and Lincoln in Illinois. In the second place, the earnest men who were most influential in the organization were always strong enough to keep under foot the self-seekers who were "in politics for what they could make out of it." A clever stump-speaker and wire-puller could not in those days thrust to one side the men who had proved their readiness to sacrifice their own prospects by taking a stand for what they believed to be the right.

All this is now changed. The Republican party no longer stands for great principles. Its great leaders are nearly all gone, and John Sherman, the sole survivor in active life, seems like the veteran who lags superfluous on the stage. A new class of men has come to the front in their stead—men like Thomas C. Platt in New York, Matthew S. Quay in Pennsylvania, Joseph B. Foraker in Ohio, and J. S. Clarkson in Iowa. They would smile at men like Seward and Chase and Lincoln, who were ready to champion a cause which might be beaten at the next election, or like Grimes, who would not hesitate himself to vote against his party, as in the impeachment of Andrew Johnson, if he thought it was trying to do a wrong. At the same time the class of men who would have restrained the Platts and Quays and Forakers and Clarksons a quarter of a century ago no longer have any influence with the Republican party, having been driven either into active opposition or at least into an independent attitude by the long and unquestioned dominance of these leaders.

It is, therefore, as a type that Foraker is to-day most impressive. It is not because he chances to live in Ohio that he is the most popular leader of the Republican party in his State. There is no reason why he should not be just as influential if he had grown up in the State of John A. Andrew, for he is the sort of man whom the Republican party of to-day everywhere most honors.

COMMISSIONER RAUM ON PENSIONS AND PATRIOTISM.

It is now thirty years since the outbreak of the great civil war, and no one who remembers those early days has ever doubted the genuineness of the patriotism that then blazed forth throughout the length and breadth of the land. It was confined to no class. It was felt in the college and on the farm, in the counting-house and in the workshop, in the luxurious homes of the rich and in the cottages of the poor. It was no mere wild outburst of wrath and hatred, although that element was not absent from it, but a strong, clear flame of love to country, of devotion to the Union that had been bought at so heavy a price by our forefathers and that had brought so many blessings to their posterity, and of determination that that Union should not be recklessly and ruthlessly destroyed. Of all the countless wars in which our race has been engaged, there have not been many in which the proportion of men who sprang to arms because they felt it to be the call of duty has been larger, in which the proportion of men who enlisted from baser motives was at first smaller.

It was not in human nature that this elevation of sentiment should be enduring. Among some of our soldiers we know that it did endure through four years of trial and disappointment, of hopes deferred and of sufferings both their own and of those who were dear to them. But we know also that there came a time when volunteers came forward only in response to special pecuniary inducement, when volunteering itself ceased and the draft became necessary, and that at last there came the evil days of substitutes and enormous bounties and bounty-jumpers and desertions and reënlistments. In those days the flame of patriotism burnt lower than at first. The core of the army was true, but it was flecked and scarred with corruption. There were many men in it who had acquired military discipline and who had at the same time learned to love military license. There were many who were brave—and physical courage is the cheapest and commonest of all the virtues—but who cared little what cause they fought for. There were many who were cowards—we would not put the number so high as Gen. Sheridan put it, but there were many who cared only for their bounties and their pay and their rations, who skulked on the battle-field, and deserted when they thought they could do so without detection. In short, our army, like other great armies, was made up of all sorts and conditions of men. There were many patriots of the purest type, and there were many of the vilest scoundrels that the substitute brokers could scrape out of the lowest slums of our great cities.

According to the definition of patriotism now announced by Commissioner Raum in the current number of the *North American Review*, and apparently acquiesced in by a large majority of the Grand Army of the Republic, there is no distinction between these classes. In their view, to be a soldier was to be a patriot. The uniform of itself imparted virtue, and whoever shouldered a musket, though he did it intending to shoot

his own officers and desert at the first opportunity, earned the eternal gratitude of the people of this country and became entitled to have this gratitude expressed in a pecuniary form. "The paltry dollars which a soldier receives as monthly pay for his military service in time of war cannot be considered a suitable equivalent for his patriotic services." That equivalent is only to be found in additional, many additional, dollars. The prospect of these additional dollars is necessary in order "to stimulate the spirit of patriotism in the people." To the patriot of the future all the brave talk about repelling the invader and preserving the Union, of defending home and liberty, will be meaningless. To all this he will reply: That is all very fine, but how much money is there in it for me? And if a satisfactory "equivalent" is not offered him, we suppose that patriotism is not to be expected to appear. And this "pig-philosophy" is presented to the people of this country as an explanation of the patriotic uprising that we have described above. Commissioner Raum is of the opinion that hereafter the descendants of those who served in the civil war "will venerate their ancestors' names all the more because they were pensioned for their honorable services." It is not probable that he is capable of rising to any higher appreciation of the causes that arouse the emotion of veneration, but it is safe to say that that emotion has never yet been known to be aroused by such causes as he suggests, nor will it be while human nature remains the same.

It is hardly necessary to say that the arguments with which Commissioner Raum supports his case do not deserve serious consideration, but some of them are so suggestive that we shall restate them with some of his facts. The hardships undergone by our soldiers between twenty-six and thirty years ago were sustained under the influence of a patriotic elation that in many cases prevented immediately injurious results, but a reaction has now come, and "with it that multitude of incurable ailments which have baffled the skill of the most learned physicians in the land." Probably 600,000 of the survivors of the war "were so impaired in health that they have lost at least twelve years of the usual expectation of life." They have lost the ability to support themselves by their labor, and it is the duty of the country which owes its existence to their services, to pay them from $6 to $12 a month as long as they live. All widows of deceased soldiers, whether able to support themselves or not, unless they have an independent income, are to receive $8 a month, and all soldiers' children under sixteen years of age are to receive $2 a month. There are now living some 1,208,000 soldiers of the Union. Of these, 478,000 are now on the pension rolls, as well as 120,000 widows and other dependents. There are now pending claims to the number of 1,095,099.

In this immediate connection it is instructive to be told that "the men who fought to save the Union were not mercenaries." "They do not propose by any action on their part to withdraw from the sympathetic touch" of their fellow-citizens—which we interpret to mean that their receptive capacity is not limited to what they get in the shape of pensions. "They know that their services during the war merited the respect of their fellow-citizens, and by no act of theirs will they forfeit that respect while life lasts." The tainted official who utters these words is little qualified to speak of what merits respect, well as he may understand how it is forfeited. Had he said that those whose sentiments he expresses would by no act of theirs forfeit the pecuniary "equivalent" which they had secured for their services from their fellow-citizens, no one would have questioned his statements.

GOVERNMENT INSURANCE IN FRANCE.

THE scheme of State insurance just brought forward by the French Government is thoroughly exposed by M. Paul Leroy-Beaulieu in the columns of *L'Économiste Français*. That journal, he observes, has for the last eight or ten years denounced the Panama Canal enterprise as the most *charlatanesque* affair of this century. The Government insurance project, however, surpasses that of the Panama Canal in charlatanry, and has not been equalled since the days of Law. The plan contemplates the payment by the Government of a pension of from 300 to 600 francs to every workman, employee, *métayer*, and domestic of either sex who shall, from the age of twenty-five years to that of fifty-five, pay a premium of from five to ten centimes for every working-day; the employer being obliged to add to this an equal contribution, and the sum to be further increased by a contribution on the part of the Government of two-thirds of the amount. No one, however, is to receive this pension who cannot swear that he is not in receipt of an income of more than 600 francs, and no one is admitted to the privileges of the scheme at all unless his income is less than 3,000 francs. Every person employing a foreigner must pay into this fund ten centimes a day, although foreigners are excluded from its benefits. In order to start the enterprise, persons from twenty-five to forty years of age are permitted to come in. The Government also guarantees to members of the same classes, in consideration of a slight supplementary premium, the payment of a gross sum of 500 to 1,000 francs at death, provided death does not occur for two years from the time of beginning payments. The cost to the Government of this system, when in full operation, would not be more than 100,000,000 francs per annum—according to the estimate of the Government; but according to M. Leroy-Beaulieu, it would be nearer a milliard.

These payments are not, strictly speaking, obligatory upon the classes to be benefited, but the law presumes that all members of these classes will accept it. Unless the workman or servant makes a declaration before the *maire* of his commune that he declines the insurance, it becomes obligatory upon the person employing him to carry out this scheme by keeping back from his wages the sum of five centimes, or ten if the workman prefers, for every working day, to add the same amount from his own pocket, and to pay over the sum to the *caisse nationale des Retraites ouvrières*. It does not seem easy to apply the scheme to *métayers*, who do not receive wages, but it would be far more difficult to make it work in the case of workmen who move about from one town to another, or even change their employers. The increase in the cares of housekeeping, if this system were to be enforced in the case of servants, would be something formidable.

As M. Leroy-Beaulieu points out, the scheme proceeds upon the common assumption that the employer is rich; that he is always able to pay more wages than he does. But in a country like France, a country of small proprietors and of industry and commerce upon a small scale, this assumption is peculiarly ill founded. It is not uncommon to hear it said in some parts of the United States that the farmer is worse off than his hired man. The hired man gets his living and his wages too, but the farmer works just as hard and only gets his living. But in France this situation is the rule rather than the exception. The small proprietor cannot afford to hire help for many days in the year; and to be obliged to pay a fine of ten or twenty centimes whenever he did so would be extremely oppressive. Even more than this is true of the great majority of employers of domestic servants. It is impossible to believe that this application of direct taxation to the household of every small proprietor in France will not arouse a general revolt against the Government.

Of course if the employer cannot afford to pay this charge, which brings no advantage to him, he must reduce the wages of his servant, and the expense to the Government of the whole enterprise must be made up by taxation. Thus the unfortunate workman or servant would suffer a direct reduction of his wages in his own contribution, a second reduction in the contribution which his master would be obliged to transfer to his shoulders, and a third reduction in the increased taxes which the enormous expense of operating such a system would entail upon the country. At first, of course, the Government would receive much greater sums than it paid out. After a time, however, the death-claims would rapidly increase, and after thirty years the pension charge would begin. To meet these increased expenses the Government should have accumulated a large reserve; but it is not safe to trust any Government with the custody of large reserves, and it is peculiarly unsafe to trust the French Government, in view of its customary annual deficits, with the custody of such a reserve as this. When it was wanted, it would be found not to exist, and its loss would have to be made up, if at all, by increased taxation. It should amount to 12 milliards of francs, a sum which M. Leroy-Beaulieu declares it would be impossible to invest safely.

In order to sustain its statement that the expense of the system would not exceed 100,000,000 francs a year, the Government assumes that the premiums could be capitalized at 4 per cent. There is no basis for this assumption, a rate of 3 per cent. or even less being all that the current rates

upon Government debts would justify. This miscalculation would add 100,000,000 or 150,000,000 francs to the deficit. Again, it is assumed that the workman's yearly total of working days is 290, but this number is too great if we allow for sickness, military service, hindrances from weather, from loss of place, etc.; and the deficit would be largely increased in this way. No allowance is made for the expense of operating a business necessarily complicated in the extreme, and here again many millions of francs would be absorbed. It would be impossible for the Government to carry out the plan of confiscating lapsed premiums. To force insurance upon the poor, and then, if they fail through any accident to keep up their payments, to deprive them of all that they have paid unless they make up the deficiency, would be intolerable. Voluntary insurance associations have had to modify rules of this character, and the Government would find their enforcement too odious. Another cause of deficit is found by M. Leroy-Beaulieu in the assumption by the Government that, of 5,760,000 workmen beginning payments at the age of twenty-five years, there will be only 3,000,000 entitled to pensions at the end of thirty years.

When we consider the universal disgust and exasperation over the operation of the new insurance law in Germany, it seems extraordinary that the French Government should have brought forward such a proposal as this. It is safe to say that it will be rejected by the people if they ever have a chance to express their opinion of it.

THE JEWS AND ITALY.

ITALY, July 15, 1891.

WITH the publication of the two volumes of philosophy, the series of Carlo Cattaneo's Literary, Economical, and Philosophical Works will be completed within the year, and there is at last a fair prospect that the publication of his political writings and of his wonderful letters may commence next February, on the twenty-second anniversary of his death. Every year that passes proves the wisdom of the Lombard seer when he warned the Italians that their violent, sudden, disorderly centralization would lead them to the loss of all that each separate province had inherited from the past and preclude their local progress in the future. Looking over his manuscripts to-day for the selection of those best suited for the first political volume, and making the inventory of the contents of those already published, I chanced upon the remarkable series of articles written when he was thirty-five years of age concerning the "interdictions imposed by civil legislation on the Israelites," every word of which fits like a glove the terrible situation in which they find themselves in "Holy Russia" at the present moment. Curiously enough, these articles were suggested to the student of all the aspects of social life by two circumstances, one of which to-day reads like a fable.

In 1835, the year before the "Ricerche economiche sulle interdizioni imposte dalla legge civile agli Israeliti" were published in the *Annali di Giurisprudenza*, edited by Zini in Lombardy, a ukase provided that, in the various provinces of Russia, with a few exceptions, all Jews who chose to devote themselves to agricultural pursuits should be exempted from taxation for twenty-five years; if they formed colonies, for fifty. They were to be exempted from the poll-tax, from any tax on land, and also from military service. The other circumstance which called Cattaneo's attention to the position of the Jews in Europe resembles the one which to-day arises in the case of Jews who are British subjects and who find themselves in Russia. Last July, a notice which appeared in the London *Gazette* relative to the rights of British subjects travelling in Russia, attracted the attention of the Anglo-Jewish Association. As it was apprehended that a difference would be made between Christian and Jewish subjects of Great Britain to the detriment of the latter, a memorial was sent to Lord Salisbury claiming for British Jews visiting Russia full and unrestricted rights under the treaty of navigation and commerce of 1859, in the same manner as can be enjoyed by Christian British subjects. The result of this memorial, and of subsequent communications with the Foreign Office, was that Lord Salisbury consulted the law officers of the Crown, who advised that as long as the disabilities to which British and Russian Jews are subjected are substantially the same, the Russian Government having maintained that foreign Jews in Russia could not claim rights withheld from native Jews, it was not open to her Majesty's Government to depart from the interpretation of existing treaties laid down by Lord Granville in a despatch of December 28, 1881.

In 1836 a case in point of the rights of French subjects, Jews or Catholics, in Switzerland attracted the attention of Cattaneo to the question. Until 1791, the disabilities of Jews in France were iniquitous. A Jew might not inhabit a house where there was a single Christian occupant, or trade in any place except where he had his fixed domicile—in Paris he was forbidden to trade at all. He had to pay toll like beasts of burden, and, even when converted to Christianity, the feudal lord could sequestrate his belongings. In 1791 all these iniquitous laws were abolished: Jews could purchase and possess, could trade and live, where they pleased. The institution of civil marriage opened out to them the possibility of forming family ties with their fellow-subjects, and the same liberties were enjoyed by them in Italy wherever the Giuseppino code prevailed. In 1807, at the great *sinedro* convoked by all the synagogues of Europe in Paris, which was, after the dispersion of the Jews, the first solemn act celebrated in the name of the whole Jewish nation, it was enjoined on all the Jews in Italy and in France "to purchase landed property, and thus to attach themselves to the country of their birth or residence; to renounce those practices which had rendered them odious in the eyes of their fellow-countrymen, and to do all in their power to captivate esteem and benevolence." And as if to compensate them for past injuries, they were admitted to military service, and in those days of military madness this was esteemed an honor. They were forbidden to pay for substitutes. Thus all the Jews of Italy and France who were neither blind nor halt nor deformed, were suddenly educated to the use of arms.

In 1825–6 two treaties had been concluded between France and Switzerland by which reciprocity of treatment was conceded for the Swiss in France and for the French in Switzerland. In the latter country, the Jews were under disabilities; in the former these had been removed. The brothers Wahl, Jews of Mulhouse, once a free city allied to Switzerland, at that time united to France, had purchased an estate in Baselland, where the municipal statutes excluded Jews from holding landed property; but they purchased as French subjects, not as Jews: "Frenchmen in France, Frenchmen in Switzerland." The Swiss authorities declared it absurd that foreign Jews should have rights denied to native Jews. "That," says Cattaneo, "should have been decided when the treaties were made. France demands equality in Switzerland for all her citizens; she makes no distinction between Jews and Christians. The treaty with France is posterior to the statute of the municipality." He then enters into the practical issues of the question. An Israelite brings capital into Basle in order to fertilize the lands of the commune. Why refuse this?

"Has the money brought by the Jews a bad odor? A vine planted by a Jew—brings it forth bitter or poisonous grapes? The inhabitants of Basle do not prevent Israelites from making money in their commune to enrich themselves by commerce with themselves, yet they seek to hinder them from consecrating their savings in works useful to the community. Thus they would force them to make money in Basle and go out of the commune to spend it in foreign countries. They allow them to arrive poor and to depart when they have become rich. It is to the interest of the inhabitants to allow the Israelites who, by their industry, have amassed millions, to spend them in fertilizing and enriching their soil. They allow Jews to lay out money on mortgages, and refuse them leave to spend it in purchase; this is to their own hurt. We abstain from all appeal to tolerance or to humanity. The brothers Wahl are capitalists who seek a country in which to invest their money. All France, England, Spain, Lombardy, and other States are open to them; they select Basle, and the peasant population of that *campagna* are so ignorant of the elementary laws of wise economy that they diminish the competitors for their lands, thus diminishing the price of them; they repel foreign capital, thus raising the rate of interest."

Cattaneo next, passing from the special case in point to the general question, traces the cruel legislation to its origin; shows how it forced the Jews to hide their wealth and lend only at a high interest, often under promise of secrecy, and how, excluded from the possession of land, after which they always hankered, they invested their money in the most portable, the least visible, shapes—in gems and other objects easily hidden—and, when these were wrested from them, gave themselves up to the most sordid and nauseous commerce, collected rags and refuse, the offal of the streets and plague houses, thus avoiding taxation also. The Israelites in late centuries paid an annual tax for the right of protection from sovereigns, for the right of residence in certain localities. This tax amounted to little more than $10 or $12 per family, but as the individuals were not counted and only a limited number of families were allowed in a certain district, the families united, the children all remained under one roof, never lighting "two fires," so that in time each family became an entire tribe. Excluded from all chance of education in Catholic countries, from the study of natural science and of mathematics, in the Mohammedan schools of Spain alone they could acquire some knowledge. The study of medicine was forbidden to them. Even their dress was prescribed: they were ordered to "perform their religious ceremonies in the most modest and unostentatious manner." Yet every restriction of their liberty and of their civil rights conduced to the enormous increase of their riches and to their parsimony; and, meanwhile, their numbers doubled in a short space of time, despite their frequent expulsions and the extinction of vast numbers from hunger,

suffering, and disease. The vices and degradation of the Jews are to be attributed to all these causes, which the wise legislator must remove, since "he who tolerates the cause approves the effects." Give them, says Cattaneo, their rights and their liberties; educate them; associate them with every hope and joy of national life; thus will they bear the burdens of their country without murmuring, and contribute their share joyfully to its prosperity. The mere fact of living in the same country is not community of life: slaves and serfs are on the same footing as beasts of burden. A proscribed sect is an enemy encamped in the bosom of the nation, and, in the secrecy of its private transactions, renders evil for evil, with interest and compound interest.

The result of the application of these maxims is as evident in Italy as in England. Between a Catholic and a Jew in Italy there is no distinction. Jews are as patriotic as Christians; they fill every office of the State, are ministers of the crown, prefects, mayors, generals in the army, conscripts with the colors. And we may add that in the revolutionary battles for the unity and independence of Italy, Israelites were among Garibaldi's volunteers on the battlefield and in the hospitals, even as Jews of Lombardy and of Mantua shared the plots and expeditions of the Young Italy pioneers. This cannot be said for the Catholics, who, while never raising a hand or wielding a sword for the Pope, either in 1849 or in 1870, abstained from fighting at all, on the pretence of not choosing to commit sacrilege. All attempts to convert the Jews to Catholicism in Italy fail utterly. Intermarriages between Jews and Christians are not infrequent, now that civil marriage is obligatory and the religious ceremony optional and of no legal effect. In short, there is no distinction of any sort visible in the country.

The present Minister of the Treasury is a Jew, and to him we owe what are styled the Popular Cooperative Banks. The title is delusive, as in very rare cases do the "people" succeed in obtaining loans except by giving such security as would enable them to obtain them from any ordinary banks. But what is to the purpose is, that all these banks succeed and have held their own throughout the tremendous commercial crisis which Italy has gone through during these late years. Should Signor Luzzatti succeed in introducing economies into the various departments of the Government without endangering the defences of the country, and without stopping public works which are absolutely necessary for the sanitary and industrial progress of the populations, he will take a place among the benefactors of Italy. At any rate, his being a Jew is no impediment—rather, one chance more in favor of his success.

Naturally, the persecution of the Jews in Russia has excited the indignation of their co-religionists in Italy. Nor is it confined to these. All are horrified at the insane barbarity of the Czar of all the Russias, and regard the expulsion of 3,000,000 Jews as a proof of dementia. The other day, 400 Jews landed at Brindisi in the most miserable plight imaginable. The inhabitants welcomed them, ministered to their immediate wants, housed, fed, and clothed them. Then one of the prominent citizens proposed that the municipal council should be convoked at once, and that an appropriation of land be made on which the exiles could build houses and live and enjoy the rights of citizens. The municipal councillors agreed to meet, and we have no doubt that the generous initiative will be followed by other cities. Though no idea of interest or remuneration entered into this proposal, worthy of a civilized nation, one cannot but wish that the wealthy Jews expelled from Russia with such instantaneous and unheard-of cruelty would settle a colony of their poor fellow-sufferers in some of the fertile, uncultivated territories of the peninsula and the islands. They would at once benefit the country of their adoption and themselves. It will be plausibly objected that while Italian immigration is so enormously on the increase, such a proposition sounds absurd; and, in fact, all that Italy could do would be to give grants of land to be redeemed—the capital must come from the organizers of colonization. J. W. M.

DEMOCRATIC ASSUMPTIONS.—V.

CONCLUSION.

LONDON, July 7, 1891.

LET me summarize the results of the train of thought which is indicated rather than followed out in these letters:

(1.) Every institution, and certainly every form of government, which has existed among mankind has been based upon certain beliefs or convictions which, because they were at one time, rightly or wrongly, assumed to be true, we may call assumptions. Neither a hierarchy, nor an aristocracy, nor a monarchy, nor a democracy, can flourish except among a people who cherish the beliefs appropriate to the particular kind of polity.

(2.) From the moment that the sentiments which support a constitution are modified or cease to exist, the constitution itself changes, not perhaps its name or form, but its essence and nature; and if the convictions by which it was maintained cease to be entertained, the constitution itself, be it a despotism or a commonwealth, perishes.

(3.) The beliefs or assumptions which lie at the basis of different forms of government will be always found to contain an element, sometimes a very large element, of real or of apparent truth. The feelings which make men like or tolerate any particular method of administration (which, it may be observed, are a very different thing from the apologies invented for a given method of administering public affairs) are for the most part suggested by large, obvious, patent facts. To some men it may seem astonishing that "the enormous faith of many made for one" should ever have prevailed among rational beings. To another, reverence for a priesthood or for an hereditary nobility may seem nothing better than a proof of the folly or the servility of human nature. But a philosophic thinker will have no difficulty in persuading himself that the belief in the divine right of kings, or trust in the hereditary virtues of certain families or races, had originally its root in ideas which, if not wholly true, were suggested by and in harmony with important facts.

(4.) The assumptions or dogmas of politics, which in more respects than one bear a strange resemblance to the dogmas of theology or of metaphysics, exhibit, when carefully investigated, a peculiarity which has hardly received sufficient attention. When first they obtain acceptance, they seem to the generation by whom they are adopted to be absolute, indisputable truths. They are believed, so to speak, without qualification. As long, further, as an opinion is supposed to be absolutely true, it inspires faith and enthusiasm. A time comes, however, when the dogma, say of the divine right of kings, ceases to be looked upon as more than what may be called a relative truth. It ceases to be the object of faith, it becomes the subject of apology. No sterner Tory lived in his day than Dr. Johnson; but if you were to compare the conscious Toryism of Johnson with the unconscious loyalty of the Englishmen who adored Elizabeth, you would easily discover that between the time of the Tudors and the age of the Hanoverians belief in kingship had undergone a curious decline and transformation.

Let it be noted, further, that the process by which beliefs are changed is not for the most part the force of reasoning. Argument is in politics as in religion rather the excuse than the ground for conversion. It is not the subtlety of logic, but the undiscerned influence of obvious facts, which in the long run influences the opinions and the conduct of mankind. Belief in the divine right of kings perished under the Stuarts, not because the prerogative lacked ardent and acute defenders, but because Charles and his sons had nothing in them to impress their subjects with a sense of royal wisdom and justice, and still more because the safety and the unity of the nation were no longer bound up with loyalty to the crown.

(5.) Democracy, or popular government, is subject to the same laws as other politics. The rule of the people as it now exists, or soon will exist, if not in every civilized State, yet assuredly in every State where the English tongue is spoken, rests upon definite beliefs. There is a democratic creed, just as there was at one time a monarchical creed or an aristocratic creed. The articles of this faith have, it is true, not been very definitely formulated, yet it were not difficult to express them in a distinct series of propositions. Part, however, of their influence consists in their being vague and undefined. Human nature sighs for what is infinite, and the indefinite has a superficial likeness to infinity. The assumptions of democracy contain, moreover, an immense amount of valuable truth. At certain times, and among a given people and under particular circumstances, they may for practical purposes be accepted as axioms. No one, therefore, ought to feel the least surprise at the influence which the democratic creed has exerted and exerts. The most dubious, from a merely argumentative point of view, of all its articles—the dogma of human equality—contains, as I have been at great pains to point out, a large element of important, even, let me say, of vital truth. The time, moreover, has been when the fundamentals of democratic belief were accepted not only by large masses of men, but by thinkers of great power, as absolute truths. A century ago democracy inspired a kind of enthusiasm which to the most ardent among modern Republicans is all but incredible.

> "Bliss was it in that dawn to be alive,
> And to be young was very Heaven."

Who is there, however strong his belief in the sovereignty of the people, who feels it bliss to be alive when he can witness the dull respectability of the French republic under the guidance of President Carnot?

A poet, it may perhaps be said, exaggerated the sentiments of his time. If we wish to measure the depth of the almost unconscious faith in democracy which swayed the world towards the end of the eighteenth century, let us note the ideas entertained by one of the most respectable of English statesmen. Burke's Duke of Richmond, a Whig of the Whigs, "has voluntarily proposed," writes Burke, "to open the elections of England to all those, without exception, who have the qualification of being eighteen years old, and has swept away at one stroke all the privi-

leges of freeholders, cities, and boroughs throughout the kingdom, and sends every member of Parliament every year to the judgment and discretion of such electors." In other words, an English Whig and a Duke was, nine years before the meeting of the States-General, prepared to advocate a constitution which, from one point of view, would have been more democratic than the Jacobin Constitution of 1795. No doubt his Lordship had not the least idea of the real effect of his proposed reform; but the simplicity with which he adopts democratic conceptions proves better than anything the strength of the democratic faith in the days of its youth. A change has come over the spirit of the world. My object in writing these letters has been to show what this change is.

It may be described very simply. The course of events is gradually forcing on mankind the conviction that the intellectual assumptions on which democracy depends are only relative truths. They may be practically true for Frenchmen, for Englishmen, or for Americans; they are not absolutely true for the whole world. They are not axioms; they are rough and serviceable generalizations. From this condition of things two results, the one speculative, the other practical, may be seen to follow. As a matter of speculation it is probable, if not certain, that popular government will, in more than one respect, within the next fifty or the next hundred years, considerably change its character. Whether it was or was not an act of political wisdom to give votes to the negroes of the Southern States I have no means of judging. Personally, I should easily believe that where every course was open to objection, the statesmen who insisted that the negro should have the full rights of citizens adopted the least dangerous as it was the most generous of policies. But I can well conceive that even now American democrats (I do not use the word in a party sense) feel no great enthusiasm for a step fully in accordance with the ordinarily received doctrines of democracy. It is, at any rate, a plausible conjecture that American citizens will, in the course of the next generation or two, be less eager than were their fathers to welcome the influx of foreign emigrants. These things are matters of conjecture. The practical result of an analysis of democratic assumptions is, that they cannot be treated as axioms from which you can conclusively argue either in favor of or against certain courses of action. Once let it be granted, for example, as it must in fairness be conceded, that the progress of democracy does not always favor the freedom of individuals, and it becomes impossible to argue that a change is good simply because it is democratic, for it is quite possible that changes which in one sense favor popular power are inexpedient because they are hostile to liberty, or, what is pretty nearly the same thing, to justice. To make the judiciary elective, for example, is certainly in one sense to increase the authority of the people; but few are the sensible men who will now accept an arrangement which may be fatal to the character and influence of the bench, simply because an elective judiciary may be termed, and with truth, a democratic institution.

Any reader, if such there be, who has studied my letters with attention, will hardly fail to follow my line of thought. My only fear is lest he should attribute to me a desire to attack popular government. Whoever should do so will misconceive the object with which I have written. Criticism is not censure; it is one thing to judge and quite another to condemn. To say that the assumptions on which popular government rests are, in common with the assumptions which support every polity, relatively and not absolutely true, is a very different thing from showing, or attempting to show, that in modern days democracy is not, for nations who have reached a certain stage of development, the best form of government. The men who, even in the single State of New York, know that democratic government has some inherent, and many more accidental, defects, must be numbered by thousands. The sane men who, throughout the whole United States, hold it possible or desirable that the Union should be governed on other than democratic principles, can hardly, I should suppose, amount even to hundreds. It is, indeed, the delusion, alike of revolutionists and reactionists, to suppose that every critic of democracy is its foe. The delusion rests at bottom on the common error that whoever shows that popular government has its faults, advocates the foundation or restoration of anti-democratic institutions. A keen perception, however, of the truth which these letters are meant to illustrate, that constitutions depend for their life upon conditions of belief and opinion, is absolutely fatal to all schemes of revolution or reaction. Where democratic convictions exist, popular government is secure, and to shake the belief in democracy would, whatever its effect, never restore obsolete forms of government which have perished with the faiths that gave them life.

AN OBSERVER.

Notes.

T. WHITTAKER & Co. will publish directly Canon Cheyne's Bampton Lectures for 1889, on the 'Historical Origin and Religious Ideas of the Psalter.'

D. Appleton & Co. have in press 'Justice,' being Part II. of Herbert Spencer's "Principles of Morality," begun some years ago with 'The Data of Ethics.' They also announce a new edition of Mr. Spencer's 'Essays—Scientific, Political and Speculative,' in three volumes.

So much of the economic controversy of the day involves an acquaintance with Ricardo's work that a new edition of his 'Principles of Political Economy and Taxation,' forming part of "Bohn's Economic Library" (Scribners), is very welcome, especially when, as in the volume before us, an introductory essay is furnished and notes and appendices are added. This matter is supplied by Mr. E. C. K. Gonner, lecturer at University College, Liverpool.

The 'Cyclopædia of Temperance and Prohibition' (Funk & Wagnalls) is a more useful book of reference than one would have expected in view of its unconcealed subordination to the Prohibition propaganda. Much of it consists of records of legislation, ecclesiastical and political deliverances, temperance organizations and movements, and of biographical and historical sketches, in all which the main facts are beyond the warping power of bias. Moreover, in the more speculative portions a good measure of frankness is shown in giving both sides a hearing: thus, the late Dr. Crosby is sandwiched in between two advocates of the "two-wine" theory, and allowed to demolish them both. We should have looked for a fuller statement of the attitude of the various churches. It would seem, also, that the *National Philanthropist*, the first temperance newspaper published in this country, should have had a paragraph to itself, and a place in the index, instead of merely casual mention in two or three biographical articles.

We have already paid our respects to the first four volumes of the handsome new edition of the works of the late Sir William Stirling-Maxwell (London: John C. Nimmo), and now have to record the completion of the enterprise with the appearance of the two concluding volumes. Volume v. is a reprint of the author's standard 'Cloister Life of the Emperor Charles V.' It contains all the matter given in the foregoing three editions, together with notes prepared by Sir William himself for a new edition, and some judicious additions made by his present editor, mostly in the shape of citations from recent publications on the subject. In addition to its typographical attractiveness, the book has the further external charm of some excellent mezzotint engravings of the leading notabilities referred to, and several prints of arms and insignia. The final volume is made up of 'Miscellaneous Essays and Addresses.' Here we find considerable historical and antiquarian matter, mostly relating to Scotland and Spain, Sir William's Rectorial Address at Edinburgh and his Chancellor's Address at Glasgow, and biographical essays on Prescott, Richard Ford, Sir Robert Strange, and the Dukes of Urbino. The author's sympathies naturally go out to Prescott, a worker in his own field. A touch of present-day interest is given in his story of Prescott's failure to obtain copyright in England for his 'Philip II.,' for which Bentley stood ready to pay him $30,000. At that date copyright could be had only by an author acquiring a domicile in England, but this Prescott would take no steps to secure, preferring "to present to the world one signal example more of the great hardship and injustice to which both English and American authors are exposed for want of a reasonable system of international copyright."

Among the Socialist publications which issue so freely from the London house of Swan Sonnenschein & Co., an American interest should be awakened by the volume called 'The English Republic.' This is a compilation, with an appearance of homogeneity, of essays from the periodical bearing the same name, edited by Mr. W. J. Linton in the early fifties. No bibliographical indications serve to reveal the piecing which has been done by Mr. Kineton Parkes to produce this connected body of doctrine; but that is of little consequence. Continuity was not the note of Mr. Linton's writing any more than of his contemporaneous fellow-republicans on the Continent. The paragraph tended to consist of a single sentence, as if the thought would be lost if not isolated. Instructive as is the comparison between the ideals of the Revolutionary period and of the present day, more curious is the human study which Mr. Parkes affords of the restless, fervid, generous career of the venerable radical, poet, and engraver, who has published so much, and who surely was the first man to give artistic style to the printed media of revolution. We well remember the simple elegance of the *English Republic*. His earlier *Cause of the People*, Mr. Parkes says, "was a well-printed quarto on fine thick paper, which bore the impress of taste." Nowhere else than in Mr. Parkes's Introduction can be found so many particulars of Mr. Linton's life.

Students will be glad to have their attention called to a new work, 'Di alcuni commenti della Divina Commedia composti nei primi vent'anni dopo la morte di Dante' (Florence: G. C. Sansoni). The author, Dr. Luigi Rocca, is a young man, but gives evidence of capacity for such scholarly labor.

The 'Allgemeine Naturkunde,' which has been a long time in course of publication, nears its end, 129 of the 132 parts having now appeared (Westermann & Co.). The section on plant life is the last to be finished. The illustrations in black and white and in color are, as usual, numerous and effective.

The current number of Longmans' *New Review* contains an article on celestial photography by that eminent but rather flighty Frenchman, M. Camille Flammarion. The portion of the paper which confines itself to facts is moderate enough; but physicists and astronomers who are familiar with the names of Fizeau, Foucault, Faye, Janssen, Mouchez, and Schoenfeld will alone be able to recognize them in such mutilations as Skaenfeld, Mague, Yanssen, Flaye, Flaucault, and Sizeau. In his concluding paragraph, "Astronomy plunges us into the insoluble mystery of the Infinite and of Eternity, and therein lies its grandeur," we recognize M. Flammarion surely enough; but not a few astronomers find its grandeur in something else.

Nos. 647-650 of *L'Art* (Macmillan) arrive at the Salon of the Champs-Élysées, in which one good effect of the schism is remarked, viz., the better hanging of the fewer pictures, so that they have "a little air" about them, and are measurably relieved of the killing contrasts which all great art galleries perpetrate. Among the miscellaneous papers there is a brief account, by M. Adolphe Jullien, of an old hôtel in the Marais (rue du Puits), his birthplace, inherited from his father. In tracing its successive owners for nearly three centuries, M. Jullien is much pleased to have encountered a member of the musical family of Hotteterre, contemporaries and associates of Molière. M. Jullien, by the way, had lately been to Rouen to hear a performance of "Lohengrin," one of twenty-six with gross receipts of 80,000 francs.

In the June and July *Portfolio* (Macmillan), Mr. Hamerton's series of chapters on the present state of the fine arts in France continue to furnish the most valuable reading. His topics are respectively "Historical Genre," a seemingly paradoxical expression which he defends, meaning by it a kind of revival of past times in which historical incident is subordinate to the realism of the presentation; and "The Rustic School." He passes briefly in review the artists who illustrate both these themes, and provides pictorial memoranda of their work where he can. Mr. F. G. Stephens has a notable paper on "Thomas Rowlandson, the Humorist," in distinction from Mr. Grego's biographic title, 'Rowlandson, the Caricaturist.'

One article in the *New England Historical and Genealogical Register* for July is pretty certain to be scanned by every reader. It is headed "Positive Pedigrees and Authorized Arms," and is "an attempt at a list of settlers named in Savage's Genealogical Dictionary of New England whose ancestors are recorded in the heraldic visitations of England, and whose descendants are probably living in the United States." The list is short, and must therefore be disappointing to all but a few. Mr. Wm. S. Appleton's name as compiler is a guarantee of its authority. The same number contains Dr. Joseph M. Toner's scrupulous transcripts of the wills of the American ancestors of Washington, some of which have appeared less accurately in these columns. A facsimile of John Washington's signature to his will accompanies the transcript. There is an appendix of interesting Washingtoniana to Mr. H. F. Waters's "Genealogical Gleanings in England," which offer abstracts of wills bearing on American Russells, Mays, Randolphs, Bennetts, Spencers, Samses, Osgoods, Benskins, Allens, Wings, Bachilers, etc. In the will of John Kyle of Stepney, Middlesex, figures his "nephew George Burrough [Burroughs] of New England, clerk," as residuary legatee, the well-known victim of the witchcraft delusion, executed in Salem on August 19, 1692.

We commend to the serious-minded Number 2 of the *Pedagogical Seminary* (Worcester, Mass.: J. H. Orpha). The editor, Dr. G. Stanley Hall, and Prof. Wm. H. Burnham have the laboring oars, and no reflecting parent or teacher can read without profit their "Notes on the Study of Infants," "Contents of Children's Minds on Entering School," "The Study of Adolescence," "The Moral and Religious Training of Children and Adolescents," and "Children's Lies." There is much else besides in this number which deserves attention, but we have not space to particularize.

Faithful and winning portraits of Mr. and Mrs. Henry M. Stanley accompany the *Photographic Times* for July.

"O. S." writes to us from Heidelberg: "*Esprit d'escalier* and *nom de plume* have been discussed in the *Nation* (Vol. 52, p. 343 and p. 362, and lately in Vol. 53, p. 12) as pseudo French and unknown in French literature. I came across a third phrase of the same category, the well-known *toujours perdrix*. It occurs in Anthony Trollope's 'The Last Chronicle of Barset'; but Mr. E. Forgues, in his paraphrase of this novel ('Fleurettes et Réalités,' *Revue des Deux Mondes*, Oct., 1868, p. 671) observes in a footnote, 'C'est l'équivalent de notre *pâté d'anguille*,' as if to show that the phrase is not used in French."

The section of Economic Science and Statistics of the American Association for the Advancement of Science will meet in Washington from August 18 to August 25. Information regarding reduced rates by rail and at hotels, etc., may be had by addressing the Secretary, Mr. B. E. Fernow, Department of Agriculture.

Our notice last week of Mr. Anstey's extravaganza, 'Tourmalin's Time Cheques,' was written from a Chicago edition whose pirated quality we animadverted upon. We had overlooked the very pretty authorized edition published by the Messrs Appleton, which all lovers of honesty and of good taste in typography will, of course, buy by preference.

—Russian Nihilists receive much attention in the August *Harper*, what with Mr. Curtis's endorsement of the famous Phi Beta Kappa oration of Wendell Phillips, and J. H. Rosny's account of Nihilists in Paris. The latter article gives an altogether human presentation of the Russian refugees—abstracted dreamers, some of them, living by preference in the quieter and more country-like parts of the city; others, absorbed students, or men of naturally eager and chafing spirits deadened now by years of vain struggle to a gentle, almost stoical resignation. The prolonged torture of their lives is well brought out, too, in the accounts of haunting spies, given great leeway by the present infatuation of the French authorities with the idea of a Russian alliance, and the constant surveillance and interference and thwarting to which all their actions and plans for securing a livelihood are subjected. We are assured that any organization for revolutionary effort among them is a pure invention of their paid persecutors. An excellent example of what a popular presentation of an abstruse scientific question should be is given in Dr. Andrew Wilson's paper, "What is Inheritance?" It is, of course, the biological *how* of inheritance that he discusses, and he leads the way down to his own theory by a clear and sympathetic statement of Darwin's speculation on pangenesis, and of its modifications by Galton and Weismann. Briefly, Dr. Wilson accepts the latter's division of the propagating germ into "body-cells" and "germ-cells," but objects to regarding the two sets as absolutely independent of each other, holding that the "germ-cells," though exclusively the vehicle of inheritance, yet are themselves "altered and transformed to a greater or less degree by the body-cells." Prof. Grant's article on New Zealand is agreeable reading, though not in very close touch with the most significant facts. His article, with Mr. Besant's on Plantagenet London, Col. Dodge's fourth paper on "American Riders," Du Maurier's serial, and Montgomery Schuyler's "Glimpses of Western Architecture," as caught in Chicago, give occasion for the principal illustrations of the number.

—Fiction is allowed full swing in the August *Century*, filling almost exactly one-half its pages. A double frontispiece gives portraits of Emperor William and his consort, with which goes Mr. Poultney Bigelow's article on the first three years of the former's reign. This is laudatory beyond warrant of any facts presented in it. Mr. Bigelow thinks it sufficient to say of his imperial hero that he is honest and courageous; many will be left with their question whether, in addition, the Emperor has a quality at least as necessary in a ruler who takes Europe for his football—namely, wisdom. The manager of the Associated Press writes discursively of the "Press as a News-Gatherer." He dwells more upon the material expansion and improvement of the newspaper than upon its gain or falling-off, as the case may be, in intellectual and moral weight. In fact, he frankly declines to discuss the latter point. Edward Hungerford's "Our Summer Migration: A Social Study" suggests a fruitful theme which has not received the detailed and continuous attention merited by a social phenomenon now taking on such vast dimensions and attended by such noteworthy changes. Many of these results are dwelt upon by Mr. Hungerford with intelligence, though one misses a close grasp of the actual facts, and feels a certain vagueness as of the work of an essayist rather than an investigator. Mr. Pennell's illustrated article on Provence; "Life on the South Shoal Lightship," by Gustav Kobbé; and the instalment in the California series, are chief among the remaining features of a number evidently gauged in the main to the taste of hammock readers.

—*Scribner's* unconditionally surrenders to August and vacation-time, laying almost no other burden upon its readers than that of choice among all the stories. The beginning of the new serial by R. L. Stevenson, in collaboration with Lloyd Osbourne, will be an event of interest to many. The first chapters scarcely come up to the dire suggestions of the title, "The Wrecker," but the blood will no doubt curdle all in good time. Andrew Lang has an article on Piccadilly, in the series on the Great Streets of the world. He manifests little enthusiasm for his subject—"This essay is not precisely a Praise of Piccadilly," he says, qualifying the Street as "cheerful and satisfactory" rather than beautiful or imposing. As might have been expected, he is stronger on the side of antiquarian reminiscence and literary suggestion than in the matter of actual characterization. Mr. Wigmore's concluding article on "Parliamentary Days in

Japan" briefly portrays some of the leaders in either house, and aptly comments on methods of parliamentary procedure as modified by Oriental temper and traditions.

—The paper on Gen. Sherman by J. C. Ropes in the *Atlantic* for August would have won early attention from the reader even without the nudge given him on the magazine's cover. It certainly deserves the meed of courage, coming, as it does, when Sherman's canonizing is all but complete. Not that Mr. Ropes plays the part of an *advocatus diaboli:* his criticism is addressed solely to the General's military capacity, and leaves that, even after all deductions are made, on a very high plane. What he undertakes to show is, that the campaign of 1864, up to the time of the march to the sea, was a failure as far as its real object was concerned—that is, the destruction of the opposing army—and that the wisdom of leaving Thomas alone to do what the combined forces had thus far not been able to accomplish, appears rather in the fortunate event than in a fair estimate of the probabilities beforehand. At the same time, he gives Sherman full credit for having clearly perceived in advance the immense moral advantage to be gained by his audacious exploit, and, of course, for the consummate skill with which it was performed. Yet he pauses to observe that the General's announced purpose to destroy the property of non-combatants—as to the fact of such destruction he does not pronounce—was in violation of the recognized laws of war. The spurious correspondence between Seneca and St. Paul affords Harriet W. Preston and Louise Dodge another opportunity for a vivid rendering of a bit of ancient life. To their instances of the stubborn clinging of Catholic and Spanish opinion to the belief in the genuineness of the letters, might have been added mention of an historical painting, recently put on exhibition in Spain, in which the old tradition was given fresh recognition. The season lends timeliness to Olive Thorne Miller's article on bird-lore, and to Miss Thomas's "Notes from the Wild Garden"—a series of poems with a running commentary in prose—which will be sure to delight all lovers of the humble flowers of the field and wayside. We may further specify "The Queen's Closet Opened," a book of combined household medicine and cookery, dating from 1656, out of which fearful and wonderful prescriptions and recipes are drawn; and a paper on "The Reform of the Senate," which finds the root of much of our political evil in the election of Senators by the State Legislatures, and proposes to render this election uncontrollable by the Machine, partly by popular nomination and partly by the double employment of the Australian ballot. The writer is aware of the Constitutional objection which may be made to his scheme.

—The period in our Revolutionary struggle when, as Franklin said, the British were "unable to carry on the war, and too proud to make peace," is covered by the tenth volume of Washington's Writings edited by Worthington C. Ford (G. P. Putnam's Sons). The Confederation was equally perplexed, and the army felt the weight of its neglect. "Private interest," Washington complained, deterred the Southern States from assenting to Col. John Laurens's proposal to levy a black regiment in South Carolina and in Georgia before either Charleston or Savannah had been evacuated by the enemy. When cessation of hostilities was actually proclaimed and exchange of prisoners begun, Washington protested to Gen. Carleton against the shipping off with the Tory emigrants a number of ex-slaves, and begged him "to prevent the future carrying away of any negroes or other property of the American inhabitants." The evacuation of New York gives us in this volume the commander's farewell orders to the American armies and resignation of his commission, and we see him retired to his estate and bargaining for the hire (or "purchase," as it was styled) of newly arrived Palatines, or of any efficient housejoiner or bricklayer; "if they are good workmen, they may be from Asia, Africa or Europe; they may be Mahometans, Jews, or Christians of any sect, or they may be Atheists." To Benjamin Harrison and to Hamilton he expresses himself earnestly concerning the defects of the existing Constitution and the need of a better cemented Federal Government. There is a noticeable appeal to the Virginia Assembly, through Madison, on behalf of "poor Paine." Washington certifies, Sept. 7, 1784, to having examined James Rumsey's model of a steamboat, and seen it tried "in running water of some rapidity," and expresses his belief in the vast importance of the discovery. In the last letter but one in the present volume he relates his acquaintance with David Bushnell, the inventor, whose fleet-destroying torpedo never justified the hopes formed in regard to it. Washington, though distrusting this "effort of genius," gave money towards it, but Bushnell "never did succeed. One accident or another always intervened."

—It would appear that Washington's aversion to slavery grew with his years until the time came for the emancipation of his own chattels by his will. The *Athenæum* of July 11 prints, for the first time, as it asserts, a letter from the ex-President written four months before his death, and dated Mount Vernon, August 17, 1797. In it he says to his correspondent, Mr. Robert Lewis:

"It is demonstratively clear that on this Estate (Mount Vernon) I have more working Negroes by a full moiety, than can be employed to any advantage in the farming system, and I shall never turn Planter thereon. To sell the overplus I cannot, because I am principled against this kind of traffic in the human species. To hire them out, is almost as bad, because they could not be disposed of in families to any advantage, and to disperse the families I have an aversion. What, then, is to be done? Something must, or I shall be ruined," etc.

—Mrs. Ednah D. Cheney has recently given to the Boston Museum of Fine Arts all the duplicates and nearly all the trial-proofs of the engraved work of her husband, the late Seth Wells Cheney, and his brother John. These two remarkable New England artists have given rise to at least eight collections, of which three are in Philadelphia, and the Boston Museum's is now the largest and, after Mrs. Cheney's, the most complete. Mr. S. R. Koehler rates John Cheney as an engraver above the late A. B. Durand, and complains of the neglect shown him by the dictionaries of biography, the latest (Appletons') offending both by meagreness and by total inaccuracy. He has accordingly prepared with great labor a 'Catalogue of the Engraved and Lithographed Work of John Cheney and Seth Wells Cheney' (Boston: Lee & Shepard), which he offers as a not exhaustive essay. Prefixed to it is a very pleasing portrait of John Cheney, whose engraving was much more extensive than that of Seth, famous rather for his crayon portraits. The description of plates is most minute, and these are followed carefully through their changes of issue in the score of "annuals" fashionable in their day, and changes of title when reprinted as fancy pieces. Indexes show what a large number of artists, English and American, were thus copied on steel or on stone, and what an array of portraits of eminent Americans was produced by John. Martha Washington, Mrs. Sigourney, Fanny Kemble, Channing, Allston, Longfellow, Bryant, Halleck, Willis, Webster, Everett, Story, are a portion. Many ladies of good family, Boston, New York, and Philadelphia beauties, figured as ideal subjects in the *Token*, the *Literary Souvenir*, the *Ladies' Cabinet Album*, the *Youth's Keepsake*, *Friendship's Offering*, and the rest. The most interesting particular is related in connection with the joint reproduction, by the brothers, of Allston's posthumous 'Outlines and Sketches.' In the introduction to the folio volume thus made up, the engravers speak of the reduction in scale they were sometimes obliged to make, and say that when this was necessary "the daguerreotype was used, by which the image was conveyed to the engraver's plates prepared for that purpose, and there fixed by tracing the line through the silver." This bears date Boston, January 1, 1850. Twenty years elapsed before this principle was employed in photographing on the block, thus revolutionizing the art of wood-cutting by exchanging line for tone, and developing an American school which now leads the world. Mr. Koehler deserves hearty thanks for his labor of love.

—A striking figure is lost to Spanish literature in the death on July 20 of Pedro Antonio de Alarcón. Though not an old man, his literary activity began at so early an age that it covers almost two generations, the fantastic tales of his youth having delighted the fathers of those who were eagerly reading his powerful novels twenty-five years afterwards. Born at Guadix, Granada, March 10, 1833, he took the impress of his birthplace in a certain Oriental flavor that always marked him—his lofty bearing, warm and somewhat unregulated imagination, and fascinating gifts as a story-teller. Thrown into the whirl and struggle of life in Madrid at the age of twenty, he wrought fiercely as poet, critic, journalist, and politician, gaining many enemies, a few friends, and less money. A successful drama, "El Hijo Pródigo," came from his pen in 1857, but was so bitterly criticised by his political and literary antagonists that, in a rage, he withdrew it from the theatre where the public was flocking, and never allowed it to be played again as long as he lived, nor would he ever write for the stage again. Apparently renouncing letters, he rushed off as a volunteer in O'Donnell's expedition to Morocco, but his letters describing the military operations were so vivid in themselves, and so fell in with the nation's unaccustomed taste of glory, that they gave him an immense fame, and he solemnly declares that before leaving camp he had received more than 20,000 congratulatory letters from all parts of Spain. Travel and political life kept his pen comparatively idle for several years, but in 1875 he reopened his literary career with a novel, 'El Escándalo,' which created a greater sensation than any book published in Spain in the century. For this, and for his inimitable short story, 'El Sombrero de Tres Picos,' he will be principally remembered. His collected works fill eighteen volumes. Since 1884 he had lived in retirement, driven to it partly by the exaggerated sensitiveness which threw him into a fury at hostile criticism, and partly by failing health.

—As the planet Saturn approaches that point in its orbit where two months hence the ring system will disappear, a multitude of watchers will be turning all sorts of telescopes upon it, both large and small. Prof. Trouvelot of Paris has already printed an elaborate paper to direct attention to the special features connected with the "disappearance," which will repay the technical observer. Meanwhile, Mr. Stanley Williams of Burgess Hill, Sussex, notifies the discovery of three delicate but distinct markings in the equatorial region of the ball of Saturn. The first and third of these are round, bright spots, somewhat brighter than the white equatorial zone in which they are situated. The second is a smaller dark marking on the equatorial edge of the shaded belt which forms the southern boundary of the white zone. While it requires patience and practice to see these markings readily, Mr. Williams has obtained abundant proof of their reality; and he publishes in the current astronomical periodicals a brief ephemeris to facilitate observations of the much-desired transits of these spots across the planet's central meridian. It will be remembered that in December of 1876 a bright equatorial spot on Saturn was discovered at Washington, which was followed and measured through more than sixty rotations of the planet, and which gave for its axial period 10h., 14m., 24s. But this determination, while the most accurate at present known, requires correction in the way of further approximation, which the continued observation of the newly discovered spots will, it is hoped, provide the material for. Unfortunately, the planet is already so far advanced towards its conjunction with the sun that these delicate markings are beyond all but the best of eyes and telescopes.

RECENT WORKS ON RAILROADS.

A FEW years ago railroad literature consisted almost wholly of technical works, which were of little interest to the outside reader. To-day the change in this respect is very marked. Public curiosity concerning railroad methods and railroad operations has become wider. It is probable that more books have been written to meet this outside demand in the last two years than in any previous period of ten times that length. Some of these works are purely popular, written to interest and amuse the public. Others are intended primarily for railroad men, but so arranged as to attract outside readers also. Still another class, probably the most important of all, is written for that section of the public which is willing to make a serious study of questions of railroad economy in their wider bearings. Both here and in England the idea has at last gained a foothold that railroad legislation is not the simple thing men once supposed, but a matter of the utmost complexity and importance; and one prominent symptom of this change is to be found in the literature to which it has given rise.

Of the more popular books, the first were histories of individual railroad systems, of which those of the Baltimore and Ohio and the Northern Pacific, the latter by Mr. E. V. Smalley, were the best known. Of recent works of this kind, none is more valuable than W. K. Ackerman's history of the Illinois Central, a system which has played a unique part in the transportation developments of the country, and whose growth is described in the work before us with unusual care. The same kind of descriptive work has been done for British railroads by Mr. W. M. Acworth, a Parliamentary barrister and writer of considerable prominence. A number of magazine articles by this author on the management of the different English systems have been collected into two volumes under the titles 'The Railways of England' and 'The Railways of Scotland' (London: John Murray). Though purely popular, and making no pretension to depth of reasoning, they give a great deal of useful information of a desultory but interesting kind as to the methods in use in Great Britain. Perhaps the nearest parallel to Mr. Acworth's book in American literature is to be found in the work published by the Scribners two years ago, under the title 'The American Railway'; the chief difference being that the Scribners' book was arranged by topics instead of companies, and written by a number of different authors instead of by one.

Of widely different size and scope is Ringwalt's 'Transportation Systems of the United States' (Philadelphia: The *Railway World*). This is nothing less than an undigested collection of information of all sorts, good, bad, and indifferent, bearing on the canals and railroads of the United States from the beginning until now. It forms a volume of enormous size, whose usefulness in its different parts depends wholly upon the source from which the information was drawn, and not at all upon any head-work of the compiler. It is a collection of materials for history rather than a history itself, and its usefulness in this respect is impaired by a lack of references to the authorities whence the information is drawn. In spite of this drawback, it will be of considerable service to specialists, and perhaps to those general readers who are endowed with abundant leisure and strong intellectual digestion.

Among works of more technical character the foremost is A. M. Wellington's 'Economic Theory of Railway Location' (New York: John Wiley). This book, though in one sense old, has passed through successive editions by which its original appearance has been much changed, and which have made it virtually new. It has merited its success thoroughly. It was the first book in the English language which applied principles of political economy to modern methods of railroading; and although written by an engineer for engineers, it contains a great deal which would be useful to legislators and courts, if they only had the sense to read it and apply it. It shows more clearly than any other book the effect of modern improvements upon cost of transportation, the conditions which govern intelligent investment of capital, and the general principles of economy in operation; and it also incidentally contains much information about railroad rates and railroad policy. The criticism may perhaps fairly be made that some things have considerably greater clearness in Mr. Wellington's mind than they have in the actual order of nature; or, in other words, that he does not always know quite as much as he thinks he knows. But where a man actually does know so much and has done such good work as the author of this book, we cannot find severe fault with him for sometimes setting himself up on a pedestal.

A recent English book on railroad operation deserves more than passing mention. This is 'The Working and Management of an English Railway,' by George Findlay, General Manager of the London and Northwestern Railway Company (London: Whittaker & Co.). It grew out of a course of lectures at the Brompton School of Military Engineering, and has rapidly passed through three editions. It treats primarily of the railroad as an organization, taking up successively the staff, the permanent way, signalling, telegraphing, rolling stock in its various forms, train management and staff management; finally dealing with rates and fares, and the relations between the Government and the railroads. The last part of this book is not so good as the first. The author has attempted to write from his own experience without much outside reading on the subject; and while this experience is of great service in describing English methods of railroad operation, he falls far behind the times in his knowledge of what has been written on the relations between the railroads and the public. In this respect English railroad men stand distinctly behind those of America or Continental Europe. Mr. Findlay's mind, on the whole, reflects the conventional attitude of English railroad managers on this subject, rather than the progressive thinking which is going to tell in the long run.

In this connection Mr. W. M. Acworth, whose more popular writings have been already alluded to, has rendered great public service by a book entitled 'The Railways and the Traders' (London: John Murray). The author is a thoroughly wide-awake man, who has studied not only English railroads, but Continental and American ones, and who in fact made extensive travels in the United States with direct reference to the objects with which this book has been written. He has unquestionably given us the most valuable contribution to railroad economics of the past three or four years. Unfortunately he writes as an advocate rather than a judge, having been employed by the Railway Companies Association to "sketch the railway rates question from the railway point of view." Doubtless there were reasons for such a policy in the special circumstances of English legislation at the time. We cannot help regretting that the book should not be ostensibly written in a judicial spirit, as it is really in most parts.

After a brief introduction, the author first takes up the principles involved in rate-making, showing the difficulties of apportioning cost of service, the absolute impracticability of equal mileage rates, and the necessity of charging what the traffic will bear. He shows the meaning of the principle of charging what the traffic will bear by analogies from turnpike tolls, from taxation, and from charges for professional service. He shows how false is the belief that one portion of traffic taken at specially low rates is done at the expense of the rest—the most prevalent of all fallacies. At the same time he carefully recognizes the necessity of protecting shippers against charges which the traffic will not bear; and in asking who shall fix the rate, he takes a point of view more judicial than that of almost any court that has attempted to rule on the subject. His conclusion is that the initiative in rate-making must, on the whole, remain in the hands of the agents of the companies, because State initiative does not furnish the facilities and the progress which England or America demands, while the French system of strict control has been purchased at the cost of most severe sacrifices in every direction.

When he comes to consider actual railroad practice, he resumes the attitude of an advocate. He holds that while English rates are high, there are good reasons for this inherent in the nature of the business. He arrives at this conclusion by a series of detailed comparisons to which we have no space to do justice. Admitting the existence of extortionate rates in many special cases, he holds, as does every student of the question, that it is useless to rely on competition; that the traders' demands, as presented to Parliamentary committees, are

much more unjust than the existing railroad practice; and that even the professional orders of the Board of Trade, recently adopted, go too far in the direction of restraint. We recommend the study of this book to all who are interested in seeing live questions vigorously dealt with, or in comparing results of business management and of legislation in America and Europe.

No account of recent English literature on this subject would be complete without some reference to a monograph on 'Express Trains,' by Messrs. Foxwell and Farrer (London: Smith, Elder & Co.), which formed the theme of an article in these columns at the time of its appearance two years ago. With infinite care and pains the writers have made a comparison of express mileage in different parts of the world, as developed in the summer of 1888, placing England in the front rank of efficiency in this respect, America second, and the rest of the world far behind. Among the different countries of Continental Europe, France and Holland do relatively best, Germany not nearly so well. The criticisms in this book were far from being relished by the German Government. It has sought to blind the eyes of the public by articles in the *Archiv für Eisenbahnwesen* which are far from worthy of the standing of that journal; and, still more wonderful to relate, finding this defence unsatisfactory, it has from that day forth begun to put on better trains with astonishing rapidity.

Of recent American works on railroad economics, Bonham's 'Railway Secrecy and Trusts' (Putnams) requires but slight comment. Those who are familiar with the same author's previous work on 'Industrial Liberty' will understand that whatever he writes is ably presented, but without adequate conception of some of the practical difficulties of the case. A more valuable book, which has deserved wider attention than it has received, is W. D. Dabney's 'Public Regulation of Railways' (Putnams). Written primarily for the needs of legislative committees, this book presents its special aspect of the subject in clear and logical fashion. It can perhaps best be described as a book about railroad law and legislation for non-professional men, written with a thorough understanding of the difficulties involved and a good sense of proportion in estimating the relative importance of various objects. There are places where we could have wished that the author had put a little more of himself into the book instead of simply giving other people's opinions, which is more than can be said of every man who writes on subjects like these.

A much more pretentious book, but not nearly so good, is that of A. B. Stickney on 'The Railway Problem' (St. Paul: D. D. Merrill Co.). Mr. Stickney's experience as President of the Chicago, St. Paul and Kansas City Railroad led people to hope for a really valuable discussion of the subject, which should leave us further advanced than we were when he began to write. Unfortunately, he has committed precisely the same mistake as Mr. Findlay in his book on English railways, and has supposed that his experience would relieve him of the necessity of reading what other people had written on the subject. The result is, that some of his propositions are commonplace and others impracticable. A very little examination of what had already been done would have shown him his errors in these respects. Not that his book is wholly without value. On the contrary, it gives an extremely interesting popular account of methods employed in Western railroad construction and of the conditions under which railroad [illegible] grew up. The author has been engaged in general business quite as much as in railroading, so that he looked at the question from both sides, and, in his account of the Granger movement, attempts to do fuller justice to all parties than has been generally the case. It seems to us that he goes too far in his favorable judgment of any of the Granger laws. "The object of all Granger laws," he says, "has been to prevent discrimination by making all rates equal or proportionate, rather than to reduce the amounts to be collected by the railways." Now, while it may be true that this was one of their objects, it is by no means a fair account of their general character. The main object was to equalize by levelling down rather than by any more rational method, and this levelling process has often been adopted in most reckless fashion. If railroad rates could actually be fixed upon the principles which Mr. Stickney supposes to be possible, the Granger legislation might have worked better than it did. But, in point of fact, the writer betrays his ignorance of the subject of rate-making, and leaves small reason to wonder that the road of which he was President was an extremely unsuccessful one. Working from his own head, and without clear knowledge of what has been written and done, he assumes that rates should be based on cost of service in precisely the crude way which was followed by writers thirty years ago. He is at least a generation behind the time in his knowledge of matters of railroad economy. His proposals for standard average rates, making the same ratio between different articles all over the country, and basing rate determination upon mathematical principles instead of upon the needs of business, would necessarily result in keeping rates up and in impairing efficiency of the service rendered. Nor can we agree with his proposals as to methods of management any better than with those as to railroad economy. It is undoubtedly true that railroads exercise quasi-public functions as agents of the State; but, with the Government of the United States organized as it is at present, we can hardly expect to have the French system of control put in force without loss of power and efficiency greater than we see in France, and far greater than the American public would for a moment tolerate. Bad as have been many abuses of railroad management, we believe that they can be better corrected by the action of the courts in enforcing equality than by a comprehensive scheme of regulation and of rate adjustment which would make railroading a department of the Government rather than a progressive business.

PALMER'S ODYSSEY.

The Odyssey of Homer. Translated by George Herbert Palmer, Alford Professor of Philosophy in Harvard University. Boston: Houghton, Mifflin & Co. 1891.

PROFESSOR PALMER, in his brief and graceful preface, has himself anticipated and disarmed criticism, if that were not already accomplished by the scholarship and the various merits of his work. He confesses that he has been allured by the song of the Sirens, and that he has failed in the impossible attempt to reproduce it. In other words, he has given us one more view of a poem which has many facets. It is, in several respects, a clear and true view; it is inevitably, also, somewhat incomplete and unsatisfactory. Perhaps there is no way for the modern reader to get the "parallax" of Homer except by making his observations from the standpoint of various translators. If Keats was able to divine the greatness of Homer through Chapman, he might certainly obtain new and delightful impressions by the aid of Worsley or of Mr. Palmer, and might as justly have paid to either of these workmen the well-earned tribute of a sonnet.

The present volume contains the whole of the 'Odyssey,' and completes the first twelve books, which appeared in 1884. The Greek text which accompanied that edition is here omitted, and a large number of slight changes have been made in the version as it first appeared. These changes are all in favor of simplicity or exactness, or of a Saxon diction; frequently, also, they have been made in the interest of the rhythm. A few inaccuracies have been corrected. The alterations are all for the better, but they are very slight in substance, and the main qualities of the work have been maintained just what they were in the earlier instalment, which was noticed in this journal on its first appearance. If Mr. Palmer had been content to produce the best prose translation of the 'Odyssey' that has yet appeared, we believe (with all due appreciation of preceding work) that he could have succeeded. He has not been content, however, with a plain prose version. He has seen the difficulty of rendering Homer in our ordinary English metres, and has cherished a theory that the free, continuous movement of the hexameter could best be conveyed by a novel form of prose which he describes as "iambic recitative." We have already expressed our opinion of this expedient. We believe that it is the one serious mistake in a work which has otherwise exquisite qualities of taste and scholarship. We believe that the real value of the work does not lie in this expedient at all; that its charm might have been retained and increased if the same vocabulary had been used in a prose of ordinary legitimate rhythm. When we say *legitimate* we are, of course, taking for granted the question with regard to certain innovations of Mr. Walt Whitman and Mr. William Morris. There is no great harm in innovating, but an innovator must win his way; in matters of taste, he must not merely capture but captivate his constituency. Men will not long look askance at a strange beauty if they really find her beautiful. Now, we are sure that Prof. Palmer in his lecture-room has read his own prose so skilfully as to produce an agreeable impression on the ears of his listeners generally; we doubt whether the ordinary reader could do as much; we have a fancy, moreover, that the most refined ear, even when listening to Mr. Palmer, would have cause for offence and uneasiness. We have a fancy that Keats, for instance, would have been uneasy in listening to the "iambic recitative."

The reason is simple enough. It constantly leads the careful listener to expect verse, and it frequently disappoints him with the cadences of prose; it gives him sometimes half-a dozen iambics, followed by a dactyl, or trochees, or a fragment of a line, ending in a hedge or a ditch of plain prose. It suggests occasionally the effect of being carried by a badly broken horse: one cannot tell what his next gait will be. At the same time, there is a monotony in these long stretches of iambic movement which is not felt in the blank verse of any great master, with its finish and variety of music, to which Mr. Palmer's method does not pretend. There is felt, again, an occasional incongruity when we meet homespun prose phrases travelling in the rhythm of poetry. Neither this monotony nor this in-

congruity is perceived in the 'House of the Wolfings,' a venture that provokes comparison with Mr. Palmer's, and of which we may almost say that its "beauty is its own excuse for being." Whatever we may think of this experiment theoretically, it has at least the merit of consistency—it keeps up a poetic diction from beginning to end. It seems, moreover, to contradict Mr. Palmer's conclusion that the Saxon English "carries in itself a dominant iambic beat." Mr. Morris writes Saxon English with a prevailing rhythm which to our ear is dactylic or anapæstic, and in so far more akin to Homer's verse, and certainly, as it is handled, swifter and more varied than the "iambic recitative." Mr. Morris was, of course, less hampered: he was moving at his own will and was not tied to the chariot wheels of a master. At any rate, he has avoided monotony; he has also avoided any inconsistency between his expression and his rhythm.

The real merits of Mr. Palmer's translation are its transparent diction, its directness, its combination of fidelity with idiom, of dignity with ease, and its eminent readableness. It shows the fluent grace of the original like a Coan robe. In some of the qualities just enumerated, it is a strong contrast to Butcher and Lang's 'Odyssey.' We have a high admiration for the conscientiousness and the felicitous turns which abound in the work of these scholars—felicities to which, indeed, Mr. Palmer's work is deeply indebted. But it must be confessed that its Biblical phraseology, its artificial tone, its diffuseness, become very wearisome. The movement is heavy. The diffuseness passes beyond the easy fulness of Homer, and degenerates into the wordiness of our early Chroniclers. The Biblical phrases become distracting; their cleverness seems to spring from the Concordance, as certain modern Latin verses derive from the 'Gradus ad Parnassum.' It is, moreover, next to impossible to write with consistency for any length of time an artificial language. People who walk on stilts must expect sometimes to get an awkward fall. And this happens to the translators when they offer the grotesque Scriptural reminiscence, "The proud wooers who speak friendly with their lips but imagine evil in their latter end"; and when they use the strange English, "All her joints were loosened," "The suitors died outright for laughter."

It is certainly a defence for some of these expressions that their strangeness is due to a conscientious attempt to imitate some feature of the original. Mr. Palmer did not entangle himself with the problem of reproducing Homer's archaism or conventionality of language—a problem which exists for any one who considers all sides of the Homeric style. The men who first heard Homer's verse undoubtedly heard forms which they did not use in ordinary conversation, while to the later Greeks it was a storehouse of poetic and archaic expression. But this problem Mr. Palmer did not touch at all, and on the whole it need not fall within the province of a prose translation. With the instinct of a delicate literary taste, he has avoided such pitfalls as we have mentioned. He has seen just how far fidelity can be pushed, how far the idioms of the two languages can be made to travel together, and at what point they must diverge. The experiment which he tried of dropping the *thee* and *thou* of solemn style has been a complete success. It relieves the reader greatly, and has not marred in the slightest the dignity of the style. Though he avoids far-fetched words and fine phrases, and though he fancies he has eschewed the "dream language, the language of poetry," the same happy instinct has saved him from making his prose prosaic. As a matter of fact, the inversions which he permits himself and his choice of words differ constantly, though subtly, from ordinary prose, and make up much of the charm of the achievement. In his representations of the naïveté of Homer, he has been sometimes very daring, and we cannot always follow him in the results. We submit that the "pretty" clothes and the "Papa dear" of Nausicaa smack of the boudoir rather than of the Arcadian housewifery and the toilet by the sea. "He shall fight the crowd" (πλεόνεσσι μαχήσεται) hits the meaning exactly, and is very clever—if it is not a little profane. When Melantho meets Odysseus, after his defeat of the beggar Irus, she taunts him in language which we quote as an extreme instance of Mr. Palmer's familiar style:

> "Why, silly stranger, you are certainly some crack-brained person, unwilling to go to the coppersmith's to sleep, or to the common lodge; but here you prate continually, braving these many lords and unabashed at heart. Surely the wine has touched your wits; or else it is your constant way to chatter idly. Are you beside yourself because you beat that scapegrace Irus? A better man than Irus may by and by arise, to box your pate with doughty blows and pack you out-of-doors all dabbled with your blood."

If we may trust our ear, this rings a little false; it has fallen a note lower than the original. It is dramatically suitable, but we see no precise warrant in the Greek for the general lowering of tone and the oddity of the closing sentence.

We had marked many neat phrases and skilful turns of expression for quotation, but it is not fair to judge by a handful of sparkling drops the even current of a style which flows strong and pellucid, confusing nothing, distorting very rarely, and mirroring with fidelity the large and simple traits of the original. We prefer to leave the last word to Mr. Palmer, and to let him show for himself how he can rise as well as sink—how nobly he compasses a poetic passage even though, as he says, he "employs persistently the veracious language, the language of prose":

> "Meanwhile our staunch ship swiftly neared the Sirens' island; a fair wind swept her on. On a sudden the wind ceased; there came a breathless calm; Heaven hushed the waves. My comrades, rising, furled the sail, stowed it on board the hollow ship, then, sitting at their oars, whitened the water with the polished blades. . . . But when we were as far away as one can call and driving swiftly onward, our speeding ship, as it drew near, did not escape the Sirens, and thus they lifted up their penetrating voice: 'Come hither, come, Odysseus, whom all praise, great glory of the Achæans! Bring in your ship, and listen to our song. For none has ever passed us in a black-hulled ship till from our lips he heard ecstatic song, then went his way rejoicing and with larger knowledge. For we know all that on the plain of Troy Argives and Trojans suffered at the gods' behest; we know whatever happens on the bounteous earth.'"

GREEN'S SPANISH CONSPIRACY.

The Spanish Conspiracy. A Review of Early Spanish Movements in the Southwest, containing Proofs of the Intrigues of James Wilkinson and John Brown; of the complicity therewith of Judges Sebastian, Wallace, and Innes; the Early Struggles of Kentucky for Autonomy; the Intrigues of Sebastian in 1795–7 and the Legislative Investigation of his Corruption. By Thomas Marshall Green. Cincinnati: Robert Clarke & Co. 1891.

It fell to our lot during the last summer to review at some length a posthumous work of the late Col. John Mason Brown, in which, under the title of the 'Political Beginnings of Kentucky,' it was sought by that gentleman to vindicate his grandfather, John Brown, from the suspicion of having had art or part in the so-called "Spanish Conspiracy" set on foot for the separation of Kentucky from the Union in 1786 and later. For the purpose of this vindication, Col. Brown found it necessary to impeach the accuracy of certain very specific statements made by Humphrey Marshall in his well-known History of Kentucky, and in this way the embers of a long-buried controversy were raked afresh from the ashes beneath which they had slumbered for more than three generations, but beneath which, it seems, they had lost none of their wonted fires in the lapse of a century. In the work before us Mr. Green has sought to kindle these embers into a leaping flame for the destruction of John Brown's political fame and for the special confusion of his latest apologist, who is represented to have been inspired with much more of pious zeal than of either truth or candor in performing the task so imprudently undertaken.

It is to be regretted, we think, that a pure and simple question of history should be complicated, as between the descendants of John Brown and of Humphrey Marshall, with a polemical purpose which discolors the narrative of the disputants on both sides, and disturbs the serenity of impartial students in their quest for truth. The color of the time is quite obscured by these obsolete personalities. Injustice is likely to be done as well to the truth as to the error of men who acted a difficult part in a grave conjuncture, when their dark striving is pursued, even across the grave, with the fierce outcries and hoarse denunciations of the political forum. Col. Brown, it is true, wrote with a becoming moderation of style, but he wrote in support of what seems to us an impossible thesis, and with a *parti pris* which hid from his sight the true perspective of history. Mr. Green, in the work before us, maintains a thesis which seems to us substantially true, but he writes with an acerbity of temper and with a personal acrimony which often impair the strength of his historical argument.

The reader, however, should not allow himself to be too much surprised at the vivacity brought by Mr. Green to his exposition of the issues which so sharply divided the houses of Brown and of Marshall in the early annals of Kentucky. The author confesses that he had only a limited acquaintance with the facts of this formative period until they were forced upon his attention by "the astonishing statements which are made in the 'Political Beginnings.'" It was natural, too, that these facts should be accentuated by the polemical purpose which breathes through every page of this volume. The strange and picturesque incidents of this stirring period have therefore come upon the writer with something like the surprise which attends a new discovery, and this surprise often finds expression in a flamboyant style of literary composition, much more remarkable for the reiterated stress of its emphasis than for its strength of reserve. Cicero pleasantly tells us in one of his letters that, in writing the history of his consulship, he had emptied on it the perfumery-pot of Isocrates, the jewel cases of all that rhetorician's disciples, and a slight sprinkling of pigments borrowed from Aristotle. Mr. Green is

much more simple in his color values. He satisfies himself with monochrome by hurling the contents of his inkstand in blow upon blow aimed at the hapless performance of Col. Brown. Even when he pays a tribute to what seems "a solitary truth" in the 'Political Beginnings,' he can do so in words no less high-pitched than these:

"As the enraptured eye of the wearied traveller in the Sahara rests with delight upon the distant palm trees which shade the sparkling spring of sweet and living water that gushes out from amidst the sands of the desert, so will the reader who has wandered through this bewildering maze of suppression, evasion, and invented inaccuracy, which appear in the 'Political Beginnings,' be charmed to find in all its pages a solitary truth." (P. 316.)

Animadversion on the errors and inaccuracies of the book which Mr. Green takes for his quarry is couched in a lurid style which leaves nothing to the imagination of the reader. The following citation will serve as a specimen:

"These tortuous concealments of the evidence, these pitiful efforts to evade the facts, these statements which are so emphatically contradicted by John Brown himself, and these shameless accusations of others, render the 'Beginnings,' instead of the 'vindication' for which it was designed by its author, a sorrowful, a painful, and a most sickening confession of the author's own conviction of John Brown's guilt, and of his detection of John Brown's deceits in his efforts to conceal that guilt." (P. 381.)

It will be admitted that even the truth of history is liable to suffer damage from a style like that.

It would have been much better if both Col. Brown and Mr. Green could have been content to put the so-called "Spanish Conspiracy" in the large historic framework to which it rightfully belongs, instead of viewing it through the pin-hole of a personal and political feud that is emptied of all significance at the present day. That there was "a Spanish Conspiracy," which in one or another of its phases and manifestations extended from the year 1785 to the year 1806, will be denied by none who has acquainted himself with the annals of that epoch. The fact of such a conspiracy, sometimes working underground and sometimes breaking out in eruptions of popular ferment, meets us again and again in the political archives of that time, as well as in the pages of Gayarré, who first gave to the story of this plot a full and perfect confirmation based on authentic documents still preserved at Madrid.

The roots of the plot were planted in the critical period which immediately followed the conclusion of the treaty of peace with England after the Revolution. The Federal Union at that time, as Gayarré phrases it, and as everybody knows, "was weak in the very bones and marrow of its organization." Washington, writing to John Jay in 1786, expressed the opinion that, ignorant as were our political councils at that time, they were inspired still more by a spirit of popular wickedness. He confessed that the waywardness of the Western people was even more to be feared than the machinations of the Spaniards at New Orleans. While Wilkinson was bargaining with Gov. Miró at the mouth of the Mississippi River, Gardoqui, the Spanish Minister at Philadelphia, was openly coquetting with the members of the Continental Congress, and bluntly avowed the opinion that "the people of Kentucky would make good Spanish subjects, and would become such for the sake of the privileges annexed to that character." The impending separation of the western part of the country from the Eastern States was a topic of common remark, and Jefferson wrote to Madison in 1787 that it might be expected to take place at any moment. The letters of Madison from 1785 to 1792 are replete with apprehensions on this same subject, for we find him reciting again and again, to one or another of his correspondents, how the people of Georgia seemed at one time to vie with the people of Kentucky for the favor of the Spaniards at New Orleans, in flagrant contempt of their Federal obligations; how the people of Kentucky, in their eagerness for political independence, "disliked to be hung up on the will of Congress" in the matter of their separation from Virginia; how it was soon to be decided whether "it were possible or worth while to preserve the Union of the States"; how a concurrence with Spain in her settled project for closing the Mississippi River to Western commerce would have for its inevitable consequence to barter away "the affections of our ultramontane brethren"; how "the people at large on the Western waters," abetted by the State of Virginia, which was "already jealous of Northern politics," would consider themselves as "sold by their Atlantic brethren" if Gardoqui should be successful in his negotiation with Jay; how all these jealousies and apprehensions were stimulated and exaggerated by the proposed surrender of the right to navigate the Mississippi River for the term of twenty-five years; how, as the result of such a surrender, "it would be no unnatural consequence" if the people of the West "should consider themselves absolved from every Federal tie, and should court some [foreign] protection for their betrayed rights"; how men of reflection, in view of these popular discontents, grew less and less sanguine as to the possibility of achieving a new system of government in proportion as they grew more and more despondent over the then existing anarchy; how the bulk of the American people, in dread of turbulence at the East, like that witnessed in Shays's rebellion, and in dread of turbulence at the West, like that menaced by Spanish intrusion, would probably end by preferring a partition of the Union into three distinct and energetic Governments, the Eastern, the Southern, and the Western; how "the ambition of individuals [who were these individuals?], mixing itself with the first impulses of resentment and interest," might by degrees lead the people of the West "to set up for themselves"; how Great Britain at the North was beckoning to Kentucky from the Canadian border, and how Spain at the South, "taking advantage of this disgust in Kentucky," was then (in 1787) "actually endeavoring to seduce them [the Kentuckians] from the Union by holding out a darling object which would never be obtained by them in the Union"; how this disunion plot, though concerted in secret, "was as certain as it was important"; how the commercial freedom of the Mississippi River had become at that crisis "a bait for the defection of the Western people"; and how "some of the leaders of Kentucky [who were these "leaders?"] *were known* to favor the idea of a connection with Spain," while the people at large were as yet inimical to the project, because their future disposition was dependent on the measures that should be adopted by the new Government about to be framed under the Constitution of 1787.

Such, in brief, is an outline sketch of that larger framework of historical facts and ideas (we could easily make it larger still) in which the so-called Spanish conspiracy should be placed to be seen in its true aspect and real proportions. The picture should be disengaged from the trivialities of personal debate and partisan contention. Statements like those we have cited from the writings of Madison alone would suffice to show the reality and the extent of the negotiations set on foot by Spanish sympathizers in Kentucky for the separation of the trans-Alleghany region from the Atlantic States. Men like Wilkinson and Sebastian, who were afterwards proved to have been for years in the pay of the Spanish Government, may have been inspired primarily by sordid motives of private gain, but none the less were they eager to cloak their personal designs under pretexts of the public welfare. Clark tells us in his 'Proofs' of Wilkinson's corruption that even that "acquitted felon," as John Randolph used to call him, was wont to palliate, and even to justify, his Spanish connections, on the ground that the situation of Kentucky, before the Constitution of 1787, was peculiar; that the Western country was laboring under exceptional disadvantages at the time when he made his bargain with Miró, and that the state of the whole Union was "doubtful and distressed," so long as the Union "was bound together by nothing better than a rope of sand."

That John Brown, while a member of the Continental Congress, was acquainted by Gardoqui with the projects of Spain for the separation of Kentucky from the Union, and that Brown communicated these projects to political friends in the Kentucky country, is not denied. It is only denied that he sympathized with the Spanish conspiracy and that he gave to it aid and comfort. It is very certain that he did not expose the conspiracy with a view to its popular condemnation, and that the plans of Gardoqui encountered from him no open opposition. His reasons for this cautious reserve were explained at the time to Madison, and these reasons seem to have commanded the approval of that prudent statesman, whose loyalty to the Union nobody can doubt. The same reasons which deterred him from even bruiting the designs of Spain serve equally well to explain why it was that he made no open opposition to them. He preferred to bide his time and to watch the drift of events in a day of political and social dissolution. In this attitude of expectation he forbore to precipitate the crisis, because he had hope as well as faith in the prospects of the new Government. So far as he gave advice at all, he seems to have thought that a masterly inactivity was better than either open resistance to the overtures of Gardoqui or open confederation with Spain.

This cautious policy may have seemed to him at that time as much the part of public duty as it was the dictate of personal prudence. But it was inevitable that the mental reservations of such a policy should carry with them all the perils that environ statecraft, whether such statecraft be prompted by patriotism or by personal ambition. That the mental reservations of Brown were inspired by patriotism seemed clear to Madison. That they were prompted by a truckling spirit of subserviency to Spain, and were fed by personal and political ambitions, was openly charged, and we doubt not honestly believed, by Humphrey Marshall.

How easy it is to do more than justice to the enigmatical attitude of Brown in this difficult crisis we may read in every page of the 'Political Beginnings' as written by his grandson. How easy it is to do less than justice to this enigmatical position we may read in every page of the volume before us. So easy does Mr. Green find it to do less than justice to

John Brown that the author will not concede to him even the poor credit of having communicated to Madison the nature of Gardoqui's overtures. It is urged that this alleged communication was an "afterthought," invented as a screen for conscious guilt. Yet we have the express testimony of Madison to the truth of the statement. Writing in 1834, he held the following language, and we cite his words at length because they contain the best defence that can be made for what at best, without such an explanation, must seem to have been an equivocal position:

"My recollection, with which references in my manuscript papers accord, leaves no doubt that the overture [of Gardoqui] was communicated to me by Mr. Brown. Nor can I doubt that, as stated by him, I expressed the opinion and apprehension that a knowledge of it in Kentucky might, in the excitements there, be mischievously employed. This view of the subject evidently resulted from the natural and known impatience of the Western people on the waters of the Mississippi for a market for the products of their exuberant soil; from the distrust of the Federal policy produced by the project of surrendering the use of that river for a term of many years; and from a coincidence of the overture in point of time with the plan on foot for consolidating the Union by arming it with new powers—an object to embarrass and defeat which the dismembering aims of Spain would not fail to make the most tempting sacrifices and to spare no intrigues. I owe it to Mr. Brown, with whom I was in intimate friendship when we were associated in public life, to observe that I always regarded him, whilst steadily attentive to the interests of his constituents, as duly impressed with the importance of the Union and anxious for its prosperity." ('Madison's Writings,' vol. iv, p. 365.)

The West Indies. A Historical Geography of the British Colonies. Vol. II. By C. P. Lucas, B.A., of Balliol College, Oxford, and the Colonial Office, London. Oxford: Clarendon Press; New York: Macmillan.

ALTHOUGH Great Britain was not invited to the Pan-American Congress, statistics demonstrate that the trade of the British dependencies in America is, after that of the United States, the first in importance among nations in the Western Hemisphere. This is not to be wondered at, seeing that, besides her vast possessions in North America, her world-wide empire embraces British Honduras in Central America, and British Guiana in South America, and numerous islands in the West Indies. It is with regard to British Guiana and the British West Indian islands that Mr. Lucas, the private secretary to Sir Robert Herbert, permanent Under-Secretary at the Colonial Office, has issued a volume of his series treating of the history and the geography of the British colonies throughout the world. In view of the fact that the colonies in question had no representation at the Pan-American Congress, it cannot but be interesting to Americans to learn from Mr. Lucas's statements respecting their commerce, that their trade, and especially their export trade, tends steadily towards the United States. This is, of course, a result of the free-trade policy of England, which enables the colonists to take advantage of the best market for the sale of their products. It must be left to our statesmen to decide whether there might not be a further development of trade relations with these tropical colonies, which, together, import goods to the value of between £8,000,000 and £9,000,000 sterling, while the exports are of equal value.

The care which Mr. Lucas has bestowed upon the volume before us has resulted in the production of a book of handy size and of very varied information respecting the interesting places treated of. Herein may be found facts of history, commerce, taxation, laws, religion, education, and other subjects of West Indian being and doing, and very pleasantly and instructively are they treated of by the author. The admirable spirit in which the colonies of Great Britain are administered in the latter part of the nineteenth century pervades the volume. One might almost imagine Mr. Lucas to be a colonist rather than a member of the Colonial Office staff, in such striking contrast is his sympathetic style of writing to that speech of the ancient régime which did not hesitate to express its contemptuousness in the admonition, "Damn your souls! grow tobacco."

Wherever it may be thought fit to give correct and ample instruction in the resources and history of the British possessions, there should the series being issued by Mr. Lucas be made a standard class-book. The statesman also will find it the authority to consult. Americans who may be fleeing from the rigid winter of the North to the perpetual summer of the West Indian Islands, will find volume ii. a very entertaining companion during their sojourn.

With the Admiral of the Ocean Sea: A Narrative of the First Voyage to the Western World. By Charles P. Mac Kie. Chicago: A. C. McClurg & Co. 1891.

WITH the approach of the four hundredth anniversary of the discovery of America we may expect a general revival of Columbian literature. This book is probably the pioneer of a number of volumes bearing more or less directly upon the finding of the New World. Very appropriately it bears the imprint of a firm in Chicago, to which city has been assigned by the Government of the United States the duty of arranging the formal celebration of this anniversary by the greatest nation of that world which Columbus found.

The author presents to us in this volume a very readable and connected account of the first voyage of Columbus, founded upon and drawn mainly from the diary of Columbus as abridged and compiled by Las Casas. The title of the book may seem rather fanciful to the casual observer, but it is the title and rank officially given by Ferdinand and Isabella to Columbus before his first voyage, and confirmed by them upon his return. His commission read as "Our admiral of the ocean sea and Viceroy and Governor in the said islands and mainlands which you shall discover and acquire." The "ocean sea" was the term used in those days when referring to the Atlantic Ocean, as distinguished from the Mediterranean Sea.

Mr. Mac Kie has taken, as we have said, the compilation made by Las Casas of the original journal of Columbus, which Las Casas used in writing his 'History of the Indies,' as the main source of his information. In addition to this, however, he has enriched and amplified his narrative by information drawn from the official documents of Spain relating to the discovery, the testimony in the lawsuit brought against the Spanish Crown, after the death of Columbus, by his son Diego, and the publications of Muñoz, Navarrete, and others under the auspices of the Spanish Government. Based upon this research, the author has constructed very successfully a lively and picturesque, as well as accurate, narrative of the great voyage of discovery. He desired to make a popular, readable book rather than a new history, and, in his endeavors to draw a living picture of the events, is quite willing to lose somewhat the dignity of the graver methods followed by others whose works are destined to greater fame. Printed in the appendix are brief notes upon several of the disputed points concerning the birthplace and early life of Columbus, and the events preceding and accompanying the voyage; these show research, and desire to ascertain the actual facts, in each case.

The book begins with the arrival of Columbus and his son at the Convent of La Rábida near Palos in Andalusia, the narrative opening in a lively style, somewhat suggestive of Kingsley's 'Westward Ho.' This description of the visit to La Rábida brings us at once to the disputed question as to whether it was the first or second visit to the convent. The proximity of the convent to the borders of Portugal, as well as the statement of Las Casas, has led most writers to state that Columbus first found refuge in this Convent directly after his flight from Lisbon. We think, however, that the author, relying upon the testimony of García Fernandez as well as the letter of the Duke of Medina Celi to the Grand Cardinal of Spain, is correct in stating that the visit referred to was the first visit that Columbus made to the convent. The testimony of Fernandez and Juan Rodriguez, surnamed Cabezudo, in the lawsuit of Diego Columbus against the Crown, also seems to settle the question of the time that aid was extended by the Pinzons to Columbus, namely, after the return of Columbus from his successful visit to the Spanish Court and after the expedition was duly authorized. That due credit has not been given to the Pinzon for this aid was owing to the insubordination, desertion, and selfishness of Martín Alonzo Pinzon, which eclipsed his own efforts as well as to some extent that of his nobler brother.

The first seven chapters of the book treat of the events preceding the sailing of Columbus, the narrative of the voyage beginning with the eighth chapter, when the three vessels left the Rio Tinto, with the ebb tide and land breeze, upon their voyage to vast unknown spaces of ocean. It is well sustained, and, though the tale has been often told, it never loses its interest. The frail craft employed, the crude and imperfect appliances for navigation, and the great mystery surrounding the watery world west of the Canaries, added to the ignorance and superstition of the seamen, will always make this adventurous and eventful voyage a matter of wonder. Those who shall view at the Exposition at Chicago the facsimile of the caravel that crossed and recrossed the Atlantic at its widest part, will more than ever marvel at the successful termination of such a voyage.

The author, both in the main part of the book and in the appendix, expresses his belief that Columbus was fairly entitled to the reward offered by the Spanish sovereigns for the first sighting of the land. We cannot, however, but agree with Irving in expressing our regret that the great discoverer did not allow the reward to go to the humble sailor by whom the land was first seen. From the journal of Columbus as edited by Las Casas we quote the following:

"The Admiral again perceived it [the light] once or twice, appearing like the light of a wax candle moving up and down, which some thought an indication of land. But the Admiral held it for certain that land was near; for which reason after they had said the *Salve* which the seamen are accustomed to repeat and chant after their fashion, the Admiral directed them to keep a strict watch upon the forecastle and look out diligently for land, and to him who should first discover it he promised a silken jacket, besides the reward the King and Queen had offered, which was an annuity

of ten thousand maravedis. At two o'clock in the morning the land was discovered at two leagues' distance."

The lines immediately preceding this quotation state that the land was first seen by a sailor called Rodrigo de Triana.

Concerning the much-discussed question of the identity of the present San Salvador or Cat Island with Guanahani, the author has good grounds for believing that this identity has been well established, and, notwithstanding the many papers upon this subject in later times, we can find no discussion of it more satisfactory and convincing than that written many years ago by Commander Mackenzie of the United States Navy, and appended to Irving's 'Columbus,' treating both of the identity of Cat Island and the course of Columbus after leaving Guanahani.

The book in its binding, paper, and typography is creditable to its publishers.

Browning as a Philosophical and Religious Teacher. By Henry Jones, M.A. Macmillan & Co. 1891.

It is seldom that a poet's system of thought is submitted to so rigorous a philosophical criticism as is, in this highly interesting volume, applied to the intellectual contents of Browning's works. Prof. Jones, in apologizing for treating professed poetry as if it were a treatise on metaphysics, observes justly that Browning forsook art for dialectics in the larger part of his later writings; these poems have either a speculative interest and value, or none at all, and hence they are to be criticised from a philosophical point of view. The statement of the case by Prof. Jones can hardly be bettered:

"Kant's 'Metaphysic of Ethics' is not more metaphysical in intention than the poet's later utterances on the problems of morality. In 'La Saisiaz,' in 'Ferishtah's Fancies,' in the 'Parleyings,' and, though less explicitly, in 'Asolando,' 'Fifine at the Fair,' and 'Red Cotton Nightcap Country,' Browning definitely states, and endeavors to demonstrate, a theory of knowledge, a theory of the relation of knowledge to morality, and a theory of the nature of evil; and he discusses the arguments for the immortality of the soul. In these poems his artistic instinct avails him, not, as in his earlier ones, for the discovery of truth by way of intuition, but for the adornment of doctrines already derived from a metaphysical repository. His art is no longer free, no longer its own end, but coerced into an alien service. It has become illustrative and argumentative, and, in being made to subserve speculative purposes, it has ceased to be creative. Browning has appealed to philosophy, and philosophy must try his cause."

The sifting of Browning's doctrines by a philosophical scholar has long been a desideratum, for the estimate of these later works did not belong to poetic criticism. They were acknowledged without difficulty to have no primary interest as poetry; it remained to ask, Were these works, then, philosophy? Prof. Jones set himself to answer the question very fully, and the volume he publishes is so much concerned with philosophy in its general principles that Browning becomes in it only an incident and illustration; or, at least, the treatise may be so regarded, and one who cares nothing at all for Browning, but much for the ethical and metaphysical questions of the time, may read the book with a lively interest.

Browning, however, is the ground of interest stated in the title, and consequently we shall confine our attention to the criticism upon the poet. The summary given of his essential doctrines is very just and clear. The three main assumptions of his theory are thus stated: "(1) That knowledge of the true nature of things is impossible to man, and that, therefore, it is necessary to find other and better evidence than the intellect can give for the victory of good over evil; (2) that the failure of knowledge is a necessary condition of the moral life, inasmuch as certain knowledge would render all moral effort either futile or needless; (3) that after the failure of knowledge there still remains possible a faith of the heart, which can furnish a sufficient objective basis to morality and religion." A few pages further on, Prof. Jones again sums up Browning's view of knowledge more concretely: "We are ignorant of the world; we do not know even whether it is good, or evil, or only their semblance, that is presented to us in human life; and we know nothing of God except that He is the cause of love in man"; and the critic then asks, "What greater depth of agnosticism is possible?" He goes on to give his conclusion: "When the doctrine is put in this bald form, the moral and religious consciousness of man, in behalf of which the theory was invented, revolts against it."

In these brief extracts the whole matter is succinctly put, but even further explication may be useful. Browning adopts the view that all man's knowledge consists only of his inner states of consciousness, an idealistic view destitute even of that universal element which exists when knowledge is regarded as true for man, instead of only for men severally. This means the "failure of knowledge," the negation of the power of the intellect to reach truth, the suicide of the mind. The poet turns, therefore, to the emotions as the means of faith, and, in consonance with much vague conviction of his time in religious matters, appeals to "the heart" in default of "the head." The critic's examination of what is meant by such an appeal is admirable; he has little difficulty in showing that, taken literally, it is unmeaning; and that such meaning as it has, real and vital in human life, is contrary to the poet's apprehension. So far from reposing in an assumption of the "failure of knowledge," this appeal from the "head" to the "heart" is from less perfect to more perfect knowledge on which the depth of the emotion depends.

In respect to the curious doctrine of Browning in regard to evil, Prof. Jones finds his easiest task; the destruction of each clause as expressing any philosophical truth is complete. In the course of the examination of the entire theory which the critic aims to annihilate, the positive element is in the main an interesting application of the idea of evolution to metaphysical conceptions, one point of which may be incidentally mentioned: he holds that, as in morals the ideal exceeds the actual, yet becomes actual at each moment of man's progress in morality, so the reality (perfect knowledge) is similarly related to the phenomenon (man's knowledge), and becomes more known at each moment of man's progress in knowledge. In other words, as it is the ideal which is incompletely held in the actual, in morality, so it is the real which is incompletely held in the phenomenon, in knowledge; one parallels the other, and in each the contradiction of the terms is solved by the process of man's transformation. The error of Browning lies in affirming the opposites as irreconcilable, in the theory of knowledge, and secondly in having recourse to a false theory of evil in order to save conduct, and a false theory of faith in order to save religion.

"I conclude," says Prof. Jones, "it was a profound error, which contained in it the destruction of morality and religion, as well as of knowledge, to make 'the quality of God' a love that excludes reason, and the quality of man an intellect incapable of knowing truth. . . . The idea that truth is unattainable was represented by Browning as a bulwark of the faith, but it proved on examination to be treacherous. His optimism was found to have no better foundation than personal conviction, which any one was free to deny, and which the poet could in no wise prove. The evidence of the heart to which he appealed was the evidence of an emotion severed from intelligence and therefore without any content whatsoever. 'The faith' which he professed was not the faith that anticipates and invites proof, but a faith which is incapable of proof. In casting doubt upon the validity of knowledge, he degraded the whole spiritual nature of man; for a love that is ignorant of its object is a blind impulse, and a moral consciousness that does not know the law is an impossible phantom—a self-contradiction."

This conclusion is sufficiently definite and severe. What has been shown is that Browning's philosophy is agnosticism, and endeavors to escape from moral and religious paralysis by an ingenious but easily confuted error in respect to the character of evil and a mystical self-deception in respect to God. The amateurishness of his metaphysics and the imperfect logic of his thinking, even within the limits of his erroneous assumptions, are both brought out. In these later poems, so far as their contents are concerned, the answer seems to be that they are no more philosophy than, so far as their form is concerned, they are poetry. The critic has the kindness to point out, on the other hand, that before Browning's later speculations developed his early ideas in the region of dialectic, he represented the truth of experience in quite another way. The errors of his reflecting period do not have place in the earlier creative period, when, as a poet, he followed the larger method of artistic intuition. The height of his development is here set at "The Ring and the Book," in which the balance of his mental habit still inclined towards art rather than philosophy, and the representation of life was by the mirror of poetry. After that time his works taken in the mass exhibit a deterioration, as much in intellectual as in poetic phases. This is true whether agnosticism be admitted or rejected. The validity of agnosticism, so far as Browning is concerned, is not in issue; the inconsequence of his conclusions as drawn from his premises is enough to prove that he was not a thinker, in the special sense of that term; agnosticism leads elsewhere than to his goals. Nevertheless, the value of this treatise as a criticism of agnostic premises is to be pointed out, and also its interest as a criticism of widespread religious and theological moods proceeding from Kantian influences. The volume is, it is true, somewhat difficult reading, but the practical interest it derives from its dealings with poetry in a concrete instance, and with the idea of evolution and the tendency of religious thought, removes it from the special class of metaphysical works, and gives to it much suggestiveness.

BOOKS OF THE WEEK.

Adams, Francis. The Genuine Works of Hippocrates. 2 vols. in one. William Wood & Co. $5.

MONA CAIRD'S ROMANCE OF THE MOORS. Cloth, $1.00; paper, 25 cts.

Coast of Maine.

CAPE ROSIER.

The lands of the "Cape Rosier Associates" on Penobscot Bay, 50 miles nearer Boston and the West than Bar Harbor, Mt. Desert, are offered for sale in parcels of five and ten acres and upwards. These lands comprise over ten miles of almost continuous shore-frontage in one of the boldest and most beautiful sections on the coast, twelve hours' journey from Boston. They front upon fine harbors, have beautiful rocky shores, beaches, woods, and mountain views. The drives along the shores and among the hills are very varied and beautiful. New wharves have been built, and new connections with daily trains and steamboats established. In these lands is offered an exceptional opportunity to purchase for very small sums fine and perfectly protected seashore estates. The lands will not be sold for speculation or in small lots.

ALFRED BOWDITCH, HENRY PARKMAN, J. MURRAY HOWE, } Trustees.

PUBLISH THIS WEEK:

The Memoirs of Talleyrand.

Volume III. Edited by Le Duc de Broglie. With introduction by Hon. Whitelaw Reid, U. S. Minister to France. To be complete in five octavo volumes. With portraits and facsimiles. Each $2.50.

"On the whole, the noise which has been made over this question of the authenticity of the Memoirs seems to me to have been quite useless. The Memoirs have in themselves the proof of their authenticity. (Talleyrand lives in them, with his curious shades of character and of thought, his singular mixture of fixed ideas and of flexibility of resolution, of solidity and of fluidity. Even the negligent style of some parts, even the small errors of fact, which might have been so easily corrected, are a guarantee. More striking than these small negligences and errors are the enormous omissions; there are great periods which seem quite forgotten. But here again the omissions are proofs of the authenticity of the Memoirs.) For some reason or other, it did not please Talleyrand to speak of some periods, of some events, of some men; his silence is significant. Many of the mysteries covered by this silence will probably be explained in the succeeding volumes. We wait for them with the greatest impatience, and we have little doubt that, like the present volumes, they will form a most important contribution to the historical literature of our age."—*Extract from Paris Letter to The Nation.*

The Leaf-Collector's Handbook

AND HERBARIUM. An aid in the preservation and in the classification of specimen leaves of the trees of Northeastern America. By Professor Charles S. Newhall, author of 'The Trees of Northeastern America.' Illustrated. $2.00.

By the aid of this volume the characteristic leaves of the trees can be classified and preserved, the illustrations and directions making it an easy task. There can be no better companion for a summer or fall ramble in the country or through the woods, and the painstaking collector can make his book not only a source of pleasure, but an artistic souvenir of holiday jaunts.

JUST ISSUED:

Eothen. Pictures of Eastern Travel.

By A. W. Kinglake. (No. XXXIII in the Knickerbocker Nuggets Series.) $1.00.

'Eothen,' says the author, "is taken from the Greek ἠῶθεν, which signifies 'from the early dawn,' or 'from the East.'"

California and Alaska, and Over

THE CANADIAN PACIFIC RAILWAY. By Dr. William Seward Webb. Popular Edition. 8vo, illustrated, $2.25.

"Dr. Webb affords a vivacious description of the country traversed, as well as of the personal experiences of the travelling party. His chronicle is ample, entertaining, and valuable."—*The Sun.*

MACMILLAN & CO.'S NEW BOOKS.

Mr. Louis Dyer's New Book.

STUDIES OF THE GODS IN GREECE

At Certain Sanctuaries Recently Excavated. Being Eight Lectures given in 1890 at the Lowell Institute. By LOUIS DYER, B.A., Oxon., late Assistant Professor in Harvard University. With Maps and Plans. 457 pages, crown 8vo, cloth, $2.50.

"Marked throughout by wonderful reason and moderation, and openness to the evidence on all sides of matters in dispute. With singular grace and felicity of phrase, with abundant learning, and with accuracy due to personal observation, Professor Dyer explains the development of the cults of Demeter, at Eleusis and Cnidus, of Dionysus, in Thrace, Icaria, Athens, and Eleusis; of Æsculapius, at Epidaurus and Athens; of Aphrodite at Paphos, and of Apollo at Delos. What gives the work its most admirable quality is the success of the author's effort to put himself at the Greek point of view. The gods are treated with the reverence that is due to them, and the fact is emphasized that there is much in Christianity which is of Greek rather than Jewish quality."—*New York Tribune.*

"The volume is marked by breadth as well as depth of scholarship, and is full of spirit and zeal in treating of the subjects in hand."—*New York Times.*

Just Published. 4to, cloth, gilt, 706 pages and more than 450 Illustrations. $6.00 net.

A DICTIONARY OF CLASSICAL ANTIQUITIES.

Mythology, Religion, Literature, and Art. From the German of Dr. OSKAR SEYFFERT. Polycarp, the Teaching of the Apostles, the Epistle of Barnabas, the Shepherd of Hermas, the Epistle of Diognetus, the Fragments of Papias. The Reliques of the Elders preserved in Irenæus.

Revised Text, with short Introductions and English Translations

By the late J. B. LIGHTFOOT, D.D., D.C.L., LL.D., Lord Bishop Durham. Edited and Completed by J. R. HARMER, M.A.

8vo, $4.00.

MACMILLAN & CO., 112 Fourth Avenue, New York.

Dodd, Mead & Co.

PUBLISH THIS DAY:

A History of the Modern Styles

OF ARCHITECTURE. By the late JAMES FERGUSSON, F.R.S. A new edition, revised and enlarged, with many new Illustrations. With a special account of Architecture in America by ROBERT KERR, Professor of Architecture in King's College, London. 2 volumes, octavo, with 330 illustrations. Half roan, $10.00.

"Mr. Fergusson's beautiful and most popular books have superseded all other Histories of Architecture. It is not only that the extraordinary abundance of his illustrations give him a special advantage over all his rivals or predecessors, but no other writer has ever had so firm a grasp of his subject, or has been so well qualified to deal with it in all its branches."—*London Saturday Review.*

A History of Indian and Eastern

ARCHITECTURE. By the late JAMES FERGUSSON, F.R.S. A new edition, 2 vols. Octavo, with 400 illustrations. Half roan, $10.00.

"The endless succession of its admirably classified illustrations of themselves form a perfect study of Indian art. Their profusion, accuracy, and beauty at once arrest and rivet interest. Mr. Fergusson's work will mark an era in the history of the arts in Asia, and is one of the noblest tributes ever offered to the splendid civilization of ancient India."—*London Times.*

At the same time a fresh supply of

A History of Architecture in All

COUNTRIES, FROM THE EARLIEST TIMES TO THE PRESENT DAY. By the late JAMES FERGUSSON, D.C.L., F.R.S., etc. 2 vols octavo, with 1,015 illustrations. Half roan, $7.50.

They call attention at the same time to their other works on Art, as follows:

A History of Ancient Sculpture. By LUCY M. MITCHELL. 2 vols octavo, with 295 illustrations. Half roan, $7.50.

A History of Painting. By WOLTMAN and WOERMAN. 2 vols. octavo, with 426 illustrations. Half roan, $7.50.

A History of Art. By WILHELM LUBKE. 2 vols., octavo, with nearly 600 illustrations. Half roan, $7.50.

A Short History of Art. By J. B. DE FOREST. 1 vol., octavo, with many illustrations. Cloth, $2.00.

JUST PUBLISHED.

JENNY'S ORDEAL.

By LEON DE TINSEAU. 1 vol., 12mo, illustrated; cloth, $1.00; paper, 50 cents.

A clever story by one of the foremost French novelists, written with fine descriptive power, with plot sufficiently complicated to make it very interesting reading.

WORTHINGTON Co., 747 B'way, N. Y.

Exhaustion

HORSFORD'S ACID PHOSPHATE.

The phosphates of the system are consumed with every effort, and exhaustion usually indicates a lack of supply. The Acid Phosphate supplies the phosphates, thereby relieving exhaustion and increasing the capacity for labor. Pleasant to the taste.

Dr. A. N. KROUT, Van Wert, O., says: "Decidedly beneficial in nervous exhaustion."

Dr. S. T. NEWMAN, St. Louis, Mo., says:

"A remedy of great service in many forms of exhaustion."

Descriptive pamphlet free.

Rumford Chemical Works, Providence, R. I.

Beware of Substitutes and Imitations.

CAUTION: Be sure the word "Horsford's" is printed on the label. All others are spurious. Never sold in bulk.

Teachers, etc.

A CLERGYMAN, COLLEGE GRADUATE, studied four semesters at Leipzig and Heidelberg, twelve years a teacher, living in a beautifully situated mountain village a thousand feet above the sea, receives into his family six boys, to be thoroughly fitted for college. Devotes his entire time to them. References if desired. Terms, $500 per school year. Address Rev. C. W. BOYD, A.M., Salem, New York.

AN EXPERIENCED TEACHER, competent in the English branches, and in ancient and modern languages, would like to teach in Boston or vicinity, and would be willing to invest some capital, if desired. Address X. Y. Z., Cambridge, Mass.

A HARVARD GRADUATE "cum laude" (1891) wishes to engage a position as teacher in a school, or as a private tutor. Classics and Modern Languages a specialty. Best of references. Address ANDREW OLIVER 2d, Mattapoisett, Mass.

A COLLEGE GRADUATE DESIRES one or more boys to tutor during the summer months. Highest references. Address WILLIAM ESTY, Amherst, Mass.

A QUIET HOME IN BOSTON FOR A few young students, with a liberally educated lady. Private instruction if desired. Address M. S., Box 70, Studio Building, Boston.

A. DEMBITZ, A GRADUATE OF Johns Hopkins, classical group, desires a position as teacher in a college or high school. Address him at Louisville, Ky.

PHYSICAL TRAINING. — PROFESSORSHIP wanted by physician experienced in Educational Gymnastics. M. D., 127 Pembroke St., Boston.

CHARLES W. STONE, Tutor for Harvard, 68 Chestnut Street, Boston.

International Modern Language Series.

The following texts, without notes, are just about to appear, edited by Prof. Ferdinand Bôcher of Harvard College:

Montaigne. De l'Institution des Enfans. (Texte original de 1580.)
Moliere. Le Misantrope. (Texte original.)
Racine. Andromaque. (Texte de 1697.)

GINN & COMPANY, Publishers,
Boston, New York, and Chicago.

Standard and Leading Reference Books for the Office, Home, and School Library.

Worcester's Dictionary

Is the standard authority on all questions of Orthography, Pronunciation, and Definition, and is so recognized by the colleges of the country, by the principal newspapers and periodicals, and by such leaders of American thought as Phillips Brooks, Edward Everett Hale, George Bancroft, Oliver Wendell Holmes, Irving, Marsh, Agassiz, Henry, etc. Leading book publishers recognize Worcester as the highest authority, and millions of schoolbooks are issued every year with this great work as the standard.

"It follows from this with unerring accuracy," says the New York *Evening Post*, "that Worcester's Dictionary, being preferred over all others by scholars and men of letters, should be used by the youth of the country and adopted in the common schools."

Sample pages and prices on application.

Lippincott's Gazetteer

Is a complete Pronouncing Gazetteer or Geographical Dictionary of the World. It contains notices of over 125,000 places, and embraces 2,680 pages. Price, in sheep binding, $12.00; half russia, $15.00.

The Chicago *Tribune* says: "It is the best work of its kind extant, and is a necessary supplement to any encyclopædia."

Lippincott's Pronouncing Biographical Dictionary.

Containing Complete and Concise Biographical Sketches of the Eminent Persons of all Ages and Countries. By J. THOMAS, M.D., LL.D. 1 vol., imperial 8vo, 2,550 pages. Sheep, $12.00; half morocco, $15.00; half russia, $15.00.

"It is a treasure-house of information; a textbook of necessity, embracing many subjects besides biography. Members of the C. L. S. C. should include it in the formation or building up of a standard library."—*J. H. Vincent, Chancellor Chautauqua University.*

Chambers's Encyclopædia.

New Edition. Vols. I, II, III, IV, V, VI, and VII now ready. Remaining volumes issued at intervals of a few months.

Edited and Published under the Auspices of W. & R. CHAMBERS, Edinburgh, and J. B. LIPPINCOTT COMPANY, Philadelphia. Complete in 10 vols. Price per vol.: Cloth, $3.00; cloth, uncut, $3.00; sheep, $4.00; half morocco, $4 50.

Specimen pages mailed on application.

"Indeed, as an authority upon the multitude of subjects treated, 'Chambers's Encyclopædia' has always stood in the front rank, and in this new edition the publishers, both in Edinburgh and Philadelphia, are surpassing their past efforts in this respect. All the most recent additions to human knowledge, in science, in scholarship, in exploration and discovery, in the application of the arts to domestic economy, are reported in this magnificent work, and are so presented, with the aid of illustrations, as to be entirely lucid, and to be in the most convenient form for ready reference. The work has already reached that point where its great utility is apparent, and each successive volume now merely approaches more closely the immense service which the completed work is bound to render to mankind in the general diffusion of the latest and most exact knowledge."—*Wilmington (Del.) News.*

*** For sale by all booksellers, or will be sent by the Publishers, free of expense, on receipt of the price.

J. B. LIPPINCOTT CO.,
715 and 717 Market St., Philadelphia.

The Nation.

NEW YORK, THURSDAY, AUGUST 6, 1891.

The Week.

QUAY and Dudley have at last resigned their positions as Chairman and Treasurer of the Republican National Committee, and Quay has resigned his membership of the Committee also. Dudley assigns a reason for his departure, saying, "My business engagements will demand all my time and attention during the coming year." Quay assigns no reason whatever. The Committee have deprived this event of its due moral force by passing resolutions extolling the retiring pair in every form of eulogy, and expressing deep regret at their departure. We take the liberty of putting into popular language the transaction which has just been completed. The letter of Quay should read something like this:

DEAR MR. FASSETT: You are well aware that I was accused of taking large sums of money from the Treasury of Pennsylvania, for private speculation, on two different occasions; that on the first occasion I lost the money, and was reduced to such extremity that I contemplated suicide, but that Don Cameron came to my aid at the last moment and paid back the money. So my enemies said, and although there was no truth in the story, the people of Pennsylvania believed it, and wanted me to 'get out,' and when I wouldn't get out, they turned on my candidate for Governor, Geo. W. Delamater, one of the purest and noblest men in the world, and defeated him by over 16,000 majority (you remember that Harrison had about 80,000 majority for President two years before). Since that time a large number of Republican newspapers in different parts of the country have been demanding my resignation as Chairman of the Committee, and predicting disaster next year if I continued to hold my present position. My enemies in Pennsylvania have gone so far as to demand my resignation as a member of the Committee also, and for the same reasons. In short, there is much ground to apprehend that if I remain Chairman, the party will be beaten next year, and that if I remain a member of the Committee, we shall lose Pennsylvania. For these reasons, which I trust you will find satisfactory, I have forwarded to the Hon. William H. Andrews, Chairman of the Republican State Committee of Pennsylvania, my resignation as the member of the Republican National Committee from that State. The greater usually includes the less, but in this case the less includes the greater.—Yours very truly, M. S. Q.

This is the substance of what they are all saying to each other in private. If a letter had been written by Dudley marked by the same spirit of frankness, it would allude in feeling terms to the unreasonable prejudice existing in Indiana and elsewhere to the use of money for the purchase of votes in "blocks of five." Also, to the unfounded and unwarranted belief that he (Dudley) wrote a letter authorizing the disbursement of a large sum for that purpose two or three years ago, which is false; and besides, everybody knows that the Democrats would have done the same thing if they had only had the money.

A month after his accession to the Presidency Mr. Harrison appointed to the Collectorship of this port Joel B Erhardt, a Republican politician of prominence, who had served as Assistant District Attorney in Brooklyn years ago, and later as United States Marshal, and who had established peculiar claims to recognition by running as the Republican Machine candidate for Mayor in 1888. Col. Erhardt has undoubtedly made as good a collector as any partisan can. The business community has been well satisfied with the business conduct of the office. Its political side has been less objectionable to enlightened public sentiment than could reasonably have been expected. The Collector has enforced the Civil-Service Law so faithfully that the "boys" have been "kicking" ever since he went in, while there has been less manifestation of "Custom-house influence," in its more offensive forms, than ever before. He has now resigned midway of his term. Why? He himself frankly tells the reason, like the straightforward man that he is. Here it is, the most important sentence being italicized:

"I have resigned because the Collector has been reduced to a position where he is no longer an independent officer, with authority commensurate with his responsibility. I have given bonds for $200,000. I have received for the Government during the twenty months last past $322,697,135 40, and I am all the time personally responsible for enormous values in money and in merchandise. My duties are necessarily performed through about 1,500 employees. I am not willing to continue to be responsible for their conduct unless I can have proper authority over them. *The recent policy of the Treasury Department has been to control the details of the customs administration at the port of New York from Washington, at the dictation of a private individual having no official responsibility.* The Collector is practically deprived of power and control, while he is left subject to all responsibility. The office is no longer independent, and I am. Therefore we have separated."

We assume that the "private individual" here referred to is "Tom" Platt. In other words, Col. Erhardt gets out because he could stay only on condition of being "Tom" Platt's man.

The *Tribune's* explanation of Collector Erhardt's removal is about as frank as words could make it, and practically confesses that Mr. Erhardt had to go because he insisted upon running the Custom-house on business principles and living up to the Civil-Service Law. It is also about as cynical in its contempt for enlightened public sentiment as words could make it, and practically declares that the Harrison Administration believes in the spoils system, and is not afraid to say so. Considering the natural tendency of politicians and organs towards indirection, it is a great help to a correct understanding of the situation when a party is so ready to tell the truth about its principles and practices. The President's course in this matter, we need hardly add, is most discreditable. In his letter of acceptance, Mr. Harrison asked the support of voters upon the basis of this pledge:

"In appointments to every grade and department, fitness and not party service should be the essential and discriminating test, and fidelity and efficiency the only sure tenure of office. Only the interest of the public service should suggest removals from office."

A difference was made in the loan market last week between notes payable in *gold* and notes payable in *dollars*. This difference amounted to 1½ per cent. in the rate of interest charged, the former being at 4½, and the latter at 6 per cent. This was the case as to time loans on collateral security. A discrimination is likewise made as to mortgage loans on real estate, and this discrimination is likely to become general. It is the first practical effect of the silver craze, or rather it is the first visible manifestation of it. The first practical effect has been a paralysis of trade in the face of cheering conditions in the natural world. The *Financial Chronicle* pictures the situation in moderate language, saying in its last number:

"Wall Street affairs continue to move on in a state of almost semi-panic, with no real cause for the condition, and indeed with every material fact and promise favoring confidence except those which relate to the wretched condition of our currency produced by silver coinage. The feeling of fear and uneasiness is so prevalent that a whisper respecting the strongest house on the street puts the markets in a quiver, while a suspicion expressed as to the payment of a dividend not due for months yet, is sufficient to make the prices of the property affected drop many points. It is easy to recall periods of general distrust when stock values and rates for money were in much the same position as now, but never an occasion like the present, when these features were prominent and yet railroad earnings, net and gross, were increasing, and the country on the verge of realizing abundant harvests of food products, with a European demand awaiting the surpluses at fair prices."

It is idle to suppose that the holders of ready money worth at the present time 100 cents per dollar in gold are going to see it converted into something less valuable without an effort to keep it in as good condition as it now is. The extra 1½ per cent. interest charged for loans payable in dollars over those payable in gold represents the amount of risk that before the maturity of the loan we shall be on the silver basis, or at any rate off the gold basis. There is some difference between the two phrases. We shall be off the gold basis whenever gold commands any premium, however small, over "current funds." We shall not be on the silver basis, strictly speaking, until gold commands a premium over current funds equal to the difference between gold bullion and silver bullion under our legal ratio, about 24 per cent. at the present time. A free-coinage bill with a clause making silver bullion exchangeable at the mint for legal-tender silver certificates, without any delay for coinage, would carry us more rapidly to this point than the present law is doing.

The question may be asked, Why do not the Clearing-house banks make their loans payable in gold, and thus take time by the

forelock? They may be compelled to do so eventually. They may be driven by the action of their own depositors to take this step, but up to this time they have reasoned with themselves that the step would not be popular; that it would expose them to the attacks of demagogues and ignorant people in Congress, and that it will be best for them in the long run to take pot-luck with the country. At the same time it is an observed fact that the Clearing-house banks hold an amount of gold at least equal to their capital stock, so that in any contingency their own shareholders are protected against a depreciation of the standard of value. It may be said that the depositors are entitled to draw out at all times as good money as they put in; but as the banks do not make the money that is deposited with them, they cannot guarantee it as against the possible acts of the Government. The situation is a deplorable one, and the only thing tolerably certain is that before any free-coinage bill can become a law, we shall be off the gold basis. The holders of ready money will see to that.

The campaign of the People's party in Ohio was opened by Senator Peffer, at Cleveland, on Thursday. He said:

"We want more money and cheaper interest. Free coinage of silver is but a drop in the bucket which must be filled. That high tariff tends to increase the volume of money is a fallacy. The glaring need of the people is more money. The eventual outcome of political parties in America must be that the money-lenders will organize in opposition to the debtor class."

This is undoubtedly the "keynote" of the party which Mr. Peffer represents, and it is well for the politicians of other parties, who are tumbling over each other in their haste to make silver dollars for these people, to understand that silver is only one instalment of the demand for cheap money. Silver is the product of labor. It is not to be had for nothing. Free coinage will not help "the debtor class," or that portion of it that Peffer speaks for. What they want is the kind of money that is made of lampblack and rags. As surely as they carry their silver programme, so surely will they push their demand for paper.

The action of the Maryland Democratic State Convention regarding the silver question is most significant. Senator Gorman controlled the assembly, and was endorsed by it for reëlection. Last winter he was a pronounced advocate of free coinage, and nobody then doubted that his party in his State would approve his position this summer. In the meantime, however, discussion of the question has so weakened the case of the free-coinage men that the Convention on Thursday refused to say a word in favor of the policy, and adopted a plank which, so far as it has any meaning, takes ground against it, since it declares that "the power of Congress to coin gold and silver ought not to be so exercised that gold coin or silver coin will become a commodity, and so disturb the operations of trade, but in such manner that the dollar in gold coin and the dollar in silver coin shall be of equal exchangeable value in all the markets of the United States." This is as far as a convention could reasonably be expected to go which was endorsing for reelection a Senator who had favored free coinage, and it represents a distinct victory for the cause of honest money. Mr. Gorman's prominence in the Democratic party only emphasizes the significance of this proof that the free-coinage craze is beginning to abate.

The result of the Kentucky election on Monday ought to open the eyes of those people who have supposed that the rise of the Farmers' Alliance threatens the supremacy of the Democratic party in the South next year. For some days past, reports have been coming from representatives of the Alliance and of the People's party that the Democrats were in great danger of losing the State. The returns show that the Democrats have elected their candidate for Governor by fully the usual majority of about 30,000, and by almost twice as large a majority as at the last gubernatorial election in 1887, when Buckner's plurality fell short of 17,000. The Alliance succeeded in electing some of its candidates to the Legislature over the Democratic nominees, and in other cases induced Democratic conventions to take up its favorites. In this way it will exert considerable influence upon legislation, but without in any way shaking the hold of the Democratic party upon the State. It is entirely safe to predict a similar result in every other Southern State. The Republican party still stands as the champion of the Force-Bill policy in the South, and however much the Democrats of that section may disagree as to minor questions, they will all stand together in opposition to that party when the national contest of next year comes on.

The most important result of Monday's election was the adoption of the new Constitution by a tremendous majority, a large proportion of the Democrats voting for it, together with nearly all the Republicans, the Farmers' Alliance, People's party, etc. The State has long stood in pressing need of a revision of its fundamental law, the existing instrument having been framed in 1849, and its antiquated character being well illustrated by its provision that the right of property in slaves is "before and higher than any constitutional sanction." Unfortunately the high hopes which were entertained of the convention called to frame a new constitution were not realized. It did, indeed, incorporate many needed reforms, like the prohibition of lotteries and the substitution of the Australian system for the *viva-voce* form of voting which has hitherto been maintained; but it also shovelled in all sorts of minor provisions which are either bad or of doubtful value, and which in either case should be adopted as legislative statutes, rather than as parts of the framework of government. Moreover, the work was done in a most slovenly manner as regards style. For example, one clause provides that the Governor shall be elected in odd-numbered years; another that Representatives shall be elected in even-numbered years; and still a third, that the Governor shall be elected "by the qualified voters of the State at the time when, and places where, they shall respectively vote for Representatives"! An even more ridiculous blunder is committed in the section which provides that "no person shall be eligible as judge of the Circuit Court who is not less than thirty-five years of age." The courts will have plenty of work straightening out such contradictory and absurd provisions.

Gov. Pattison of Pennsylvania is a most exasperating kind of man to the average Philadelphian. When the bank scandals there became to a certain extent public, and Bardsley's resignation left a vacancy in a plundered office, the Governor stepped in and filled the vacancy with a Democrat of his own kind of independence, who cannot be counted on at all to conceal matters simply because they reflect on the character of prominent Philadelphians. The fathers of the city carried to the courts the question of their own right to make this appointment, but the courts sustained the Governor. Now this same truth-seeking Governor has, in a very easily understood letter, asked Secretary Foster to authorize him to appoint a committee of three or five citizens to examine the books of the Keystone Bank. The simple meaning of this request is, that Gov. Pattison has no faith in any thorough investigation of the bank scandals by the Councils Committee and their and the Mayor's experts, and so he proposes to take a hand in the investigation himself. There is a blending of city and State interests in the office of the Philadelphia city Treasury, and it is this which gives the Governor an excuse for making his request, and takes from the Secretary of the Treasury any excuse for assisting in concealing the frauds by rejecting Gov. Pattison's petition. Mr. Foster has, in fact, given his consent to it.

The new Republican Senator from New Hampshire, Dr. Jacob H. Gallinger, has had his portrait painted by the old Republican Senator from the State, "Bill" Chandler. The picture is done in Chandler's newspaper, the Concord *Monitor*, and the artist puts his full name at the bottom. We reproduce a few touches:

"The necessities and desires of Dr. Gallinger were money and office. For money he was employed by Samuel W. Hale in his canvass for the Governorship in 1883, and no money-barrel has he ever seen, from that of the Montreal railroad in 1878 to that of Gen. Alger in 1891, without an intense desire to tap it and absorb its contents. Unworthy ends by corrupt means have been his unvarying aim. In 1887 he sold himself and his influence as member of Congress and Chairman of the State Committee to the Concord Railroad for $5,000 or

more; and he superintended the expenditure of the money of that company among venal Republicans over the State to the amount of $100,000 or more. With the aid of the mercenary force thus organized, he usurped the State Committee Chairmanship in 1888 and became an unsuccessful candidate for Senator in 1889.

"He originated or joined numerous wild-cat endowment orders, and is more responsible than any other living man for the injury, suffering, and disgrace caused to New Hampshire by these wicked and reckless organizations; and he took care to obtain in cash his own large fees as supreme medical examiner, and to secure for himself the earliest benefit certificates issued. With his barrel full of money obtained thus and from the Concord Railroad, he sent out during the canvass of 1890 his circulars demanding the Senatorship, and brought on an issue in the town and ward caucuses which of itself was sufficient to cause the close result in the State on members of the Legislature."

It has long been believed that there was about as much rascality to the square inch in the management of the Republican party in New Hampshire as could be found anywhere in the country, but it was never expected that one United States Senator would turn State's evidence against another.

The *Times* publishes the charges of Cashier Banta of the New York Life Insurance Company against the President and in a general way against the executive management of the company. These charges have been going about by word of mouth for years, but in a very vague and indefinite way Nobody except the committee who investigated them could have understood their gravity. It is hardly possible to imagine anything worse than these charges, and it is difficult to understand how the cashier could be retained in office after the President had been acquitted of them. The truth or falsity of them cannot be pronounced upon by the newspaper press, but there is one charge that the Legislature ought to look into at an early day, viz.:

"(7.) They have spent immense sums under the name of 'law expenses,' presumptively in corrupting Legislatures, to defeat investigations, and to procure the passage of laws making speculation in stocks more easy."

The *Times* says that the money paid for corrupting the Legislature was paid to lobbyists, "the most notable of whom is well known in public life in this city." Why not give his name?

The *Tribune* thinks that our exports of flour to Cuba will at once be doubled as a result of the reciprocity agreement. As we already supply three-fifths of Cuba's total consumption of flour, this would mean that we are going to absorb all of Spain's share in the trade, and also that the consumption is to be increased by one-fifth. But the Spanish millers are left with a discrimination of one dollar a barrel in their favor, and will probably remain in the field, while there is no likelihood whatever of an increased consumption of flour. The majority of the population almost never taste wheat bread, their staple diet being native fruits, corn, and beans. Moreover, the main cause of Cuban complaint is not touched by the so-called treaty—that is, our McKinley tax on imported tobacco. It is that which has closed the factories in Havana and created widespread distress. If we would agree to remove that, it might be in order to talk about the relief brought to misgoverned Cuba by "American diplomacy," and to expect that the grateful and prosperous Cubans would double all their American orders. As it is, they will have to put up with Mr. Blaine's barren assurance that the President will make the tobacco grievance the subject of a "special note." What the Spanish Minister asked was, that the President would agree to recommend to Congress a reduction of the tobacco duties; if he thinks to secure this through that "special note," he will be very much mistaken. With the tobacco duty remaining as it is, with Cuban finance in a bad way, and likely to be in a worse one as a result of the treaty, and with the power expressly reserved to the Cortes to upset the whole arrangement, the measure is not fitted either to give great satisfaction in Cuba or notably to increase our export trade. We already have the best of Cuba's foreign commerce, and our exporters would do better to continue to rely upon their natural advantages than to count too much upon this defective reciprocity agreement.

The news item sent out from Washington in regard to the increase of English exports to Brazil, suggests comparison with the state of our own commerce with the same country. This will at once show that we are making no impression upon the trade in cotton manufactures. English exports of cotton goods to Brazil for the first four months of this year amounted to $7,591,440, as against $3,702,215 for the corresponding period of 1890. Our own exports of similar products to the same country for eleven months ending with May 31, 1891, were of a value of $505,610, as compared with $726,574 for the same part of the preceding fiscal year. Now, as the treaty of reciprocity secured us special advantages in the matter of cotton goods, this result is considerably discouraging, and goes to prove that the *Rio News* was correct in assuring English cotton-manufacturers that they need not fear their American rivals even under the treaty. It may be said that the reciprocity arrangement has not yet had time to work; that may be so, but, in so far as it has worked, it would seem to be no great help to our exporters of cotton goods, as their shipments for May of this year, the second month of the treaty's operation, were $15,000 less than for May, 1890. We cannot extend the comparison to exports of woollen and linen goods, for the very good reason that we have none. In the matter of manufactures of iron and steel, horse-cars, engines, etc., the Treasury returns show a marked gain in our Brazilian trade, fully as great as that reported for England. So, too, in exports of wood and lumber, and manufactures thereof, considerable advance is shown. No figures are given for the exports of agricultural implements to Brazil, but for South America as a whole, a great falling off appears—upwards of $870,000. This is principally due to the Argentine collapse, it should be said. The whole matter comes down to this: Brazil is having a great business and speculative "boom," and we are getting a share of her expanding foreign commerce in those products in which we were able to compete before the treaty. That measure does not seem to have had any marked effect one way or the other. Certainly it has not shut out England, and, just as certainly, the only increased demand that we have been able to supply is a mushroom growth which may die away as suddenly as did the Argentine.

A sort of modified Farmers' Alliance is gaining considerable headway in Switzerland. It calls itself an Agrarian League, and appears to have been evoked by the writings and public appeals of one Gottfried Keller. He is a farmer in the Canton of Zurich, and makes his war-cry, "The Land and the Government for the Farmer!" In the course of a summary of his views and demands he says: "The State should be, above all things, for the service of agriculture; the universities should be lessened or suppressed and primary education simplified; the public service should be conducted with the strictest economy; borrowing on mortgage should be on easier terms, and the land should be taxed not on the basis of its assessed value, but on that of the income derived from it; and the exaggerated claims of workingmen in the cities should be combated, particularly in the matter of shorter hours of labor." The last specification marks a peculiar phase of the movement, in its avowed setting the laborer of the field against the laborer of the shop. The League is reported to be spreading rapidly through the rural regions, and has at least this testimony to its growing strength, that the labor journals are outspoken in hostility to it. But the organ of the farmers—they have one already—accepts this as inevitable, and as a part of the conflict that is to come, saying: "We are positive that a deep chasm separates the industrial workingman from the farmer. . . . The latter knows that he gets nothing without hard work, and it is a mystery to him how the workingman cuts down his hours of work from 12 to 11, to 10, and finally to 8, all the while increasing his wages by means of strikes, and still asking for more." Whatever may be the fate of the Swiss organization, it will serve to call attention to the lengths to which State Socialism has gone in Switzerland, in the interest of the workingmen of the cities and to the oversight of the laboring men in the country districts. It may also have the effect of giving the Catholic authorities pause, and making them less ready to go the whole Socialist figure than they appeared to be at the time of their Congress at Olten, last year.

THE DEMONETIZATION OF SILVER.

SENATOR STEWART of Nevada takes exception to our statement that he voted for the act demonetizing silver in 1873. On the 10th of January, 1871, there was a bill under consideration in the Senate of the United States (S. 859) in relation to coinage. It named as silver coins of the United States the half-dollar, the quarter-dollar, and the dime, and no other, and it contained also a section in these words:

"Sec. 18. And be it further enacted, That no coins, either of gold, silver, or minor coinage, shall hereafter be issued from the mint other than those of the denominations, standards, and weights herein set forth."

The legal-tender faculty of silver coins was by this bill limited to one dollar. Mr. Stewart was then a member of the Senate, and participated in the debate on this bill. The vote on the passage containing the fore going sections, provisions, and prohibitions was yeas 36, nays 14. Mr. Stewart is recorded among the yeas and Mr. Sherman among the nays. The bill, after passing the Senate, was sent to the House, where it failed for want of time. All this took place in the Forty-first Congress, third session.

The same bill substantially was considered and passed by the House in the next Congress and came before the Senate on the 26th of December, 1872. The clause relating to silver coins was in these words:

"That the silver coins of the United States shall be a dollar, a half-dollar, or fifty-cent piece, a quarter-dollar, or twenty-five-cent piece, a dime, or ten-cent piece; and the weight of the dollar shall be 384 grains; the half-dollar, quarter-dollar, and dime shall be respectively one-half, one quarter, and one-tenth of the weight of said dollar, *which coins shall be a legal tender at their nominal value for any amount not exceeding five dollars in any one payment.*"

Section 18, prohibiting the issue of any other coins than those named, was in this bill in the words already quoted.

The standard silver dollar was and is 412½ grains, not 384 grains, as provided in this bill, but that fact is not material, since the dollar here spoken of was not to be full legal tender. It was to have the same legal-tender faculty as two half-dollars. The history of this particular provision is that the House Committee on Coinage thought it would be a good idea to have a coin approximately equal to the French five-franc piece. So they put into the bill a dollar of 384 grains, exactly equal to two half-dollars. The French five-franc piece weighs 385.8 grains, nine-tenths fine.

The Senate Committee on Finance amended this section of the bill by substituting a trade dollar of 420 grains for the would-be five-franc dollar. The clause limiting the legal-tender faculty of all silver coins to $5 in any one payment was retained. The bill as amended was passed by the Senate on the 17th of January, 1873, without a dissenting vote. That Mr. Stewart was present, and was giving his attention to the bill, is shown by the record of the debate, his name appearing on the same page which records the passage of the bill. There were some minor matters of disagreement between the House and the Senate which went to a Conference Committee, but the demonetization of silver was not one of the points of disagreement, as we have seen. Both houses had agreed that silver in any form should not be legal tender for more than five dollars. The report of the Conference Committee was agreed to by both houses without a dissenting vote.

The Coinage Act was printed thirteen times in the course of its passage through Congress, for the use of members, and documents were repeatedly and officially sent to members of the Senate and House calling their attention in capital letters to the fact that the silver dollar was discontinued by the bill. Perhaps Senator Stewart did not know what was meant by discontinuance of the silver dollar. That would not be at all wonderful, seeing how heedless he is, and seeing, also, that the silver dollar had been for a long time a disused coin, and was almost as rare a curiosity as the *stater* of ancient Greece.

Mr. Stewart raises considerable dust (it is nothing but dust) about the omission from the *Congressional Globe* of the usual statement that section 15 of the bill had passed. There is a hiatus here which can only be accounted for by an oversight on the part of the *Globe* reporter or of the foreman of the printing-office. The bill itself was in the hands of every Senator as well as in the hands of the Reading Clerk of the Senate. The record of the latter, which is the only legal evidence, says that this section was agreed to. What was Mr. Stewart doing at this time? Was he waiting, with a copy of the bill in his hand, and with section 15 before his eyes, to see what the *Globe* would say about it at some future time? Why did he not call attention to the fact that here was a clause demonetizing silver? Why did he not, within a day or two, call attention to the fact, if it were a fact, that section 15 had not been actually passed? Evidently because he and everybody else at that time were in favor of section 15. Mr. Stewart had voted for a similar section in the bill of 1871.

Mr. Stewart says:

"Let it be borne in mind that President Grant signed the bill demonetizing silver on the 12th of February, 1873, and that in January, 1875, he signed the specie-resumption act and returned it to the Senate with a recommendation that two or more mints be constructed to *coin silver dollars* to provide for the resumption of specie payments in 1879, the date fixed for such resumption."

This is not very important except as illustrating Mr. Stewart's recklessness. There is not a word about "silver dollars" in President Grant's special message accompanying his signature of the Specie-Resumption Act, nor a word to show that he meant silver dollars. He speaks about "fractional currency," and about "change," and about "silver," meaning, of course, the only silver that the generation to which he belonged had been accustomed to, namely, silver half-dollars, quarters, and dimes. If he had reference to legal-tender silver dollars, he would undoubtedly have said so.

Mr. Stewart says further:

"I defy any one to point out a sentence or a suggestion in the *Congressional Globe* during all the time the Coinage or Mint Act of 1873, or any other Coinage or Mint Bill, was under consideration, intimating any purpose or intention to omit the silver dollar from the list of coins, or in any way to limit or restrict the coinage of silver."

This is another sample of Mr. Stewart's recklessness. He can hardly be ignorant of the fact that Clarkson Potter, W. L. Stoughton, Samuel Hooper, and William D. Kelley (although Mr. Kelley afterwards denied it) all discussed the demonetization of silver as a feature of this bill, and that their remarks are in the *Congressional Globe*—for example, in the debate in the House on the 9th of April, 1872. We might make other references from the same volume, but this one is sufficient to brand Mr. Stewart's assertion as being of no higher value than his assertion that he did not vote for the demonetization of silver. He voted for it twice, to wit, on the 10th of January, 1871, and again on the 17th of January, 1873.

THE DEPRESSION IN RAILWAY STOCKS.

A SURVEY of the railway field does not disclose any sufficient reason for the extremely low prices at which most railway stocks are now selling. The earnings of the roads have been, with few exceptions, good, and they have been increasing. Several roads have advanced their rate of dividend. There has been a cessation of the mad competition for new territory, and the competition for existing business has been probably less furious than in some former years, even if it has not yet been brought within the bounds of moderation. There have been no expensive strikes, and no more destruction through the action of the elements or from accident than is incident to the business. Moreover, harvests of an unusually bounteous character are either already secured and beginning to move, or are in such promising condition that it would be an excess of caution to disregard the practical certainty of profitable business; and probabilities of this kind are almost always indicated by advancing prices for stocks. People who have not got them think they would like to get them, and people who have them think they would rather keep them unless they could sell them at an advance.

The fact that people would like to buy stocks, however, has no tendency to raise their prices unless they have the money to pay for them. It does not constitute an "effectual demand." This money may either be their own or it may be borrowed, and the first question that we would ask is, Have people at present any large amount of money to invest? If we look back three or four years, we see that a great deal of money has been wasted in unproductive enterprises. We do not refer to speculative schemes like those of M. Secrétan and his copper syndicate, because such schemes did not necessarily involve the loss of any money at all. What some lose others gain, as in any gambling venture, and although there may be some incidental waste of money through the disturbance of trade, the loss is not very considerable. But in the enterprises to which

we refer, money is actually sunk without any return, or at least without any adequate or immediate return.

The greatest single instance of this kind is, of course, the Panama Canal. This frightful blunder cost the French people enormous sums, and the loss is probably a total one. But although the loss had to be borne by the French people, it was none the less a diminution of the world's stock of capital. The individual sufferers were the French people, whose savings were swept away, but so close are the business relations of all countries now that the loss of these savings must have affected the rate of interest throughout the world, either causing it to rise or preventing it from falling, or rendering it impossible to borrow money for undertakings that could otherwise have procured it.

In this country very heavy losses were met with, owing to the construction of numerous lines of railway, principally in the Southwest, that have produced no return upon the investment, and owing to some minor causes that tended to the same result. These losses may be only temporary, but they are evidenced by the reduction or cessation of dividends, and the owners of these stocks are a good deal poorer than they were four years ago. It might be said that hardly a family in New England, the great investing region, has not been more or less inconvenienced by these losses, and it is a necessary consequence that they have less money to invest than they did have.

A more recent loss has taken place in the Argentine Republic. Here, again, the losers were not American citizens, but the loss, whatever it may be in amount and by whomsoever suffered, must necessarily have had its effect upon the money markets of the world. It seems to have had, indeed, a very marked effect, and it can only be explained upon the supposition that the market had not recovered from the previous losses; that is, that the savings of the people had not yet filled up the deficit. At all events, there is every indication that there is a scant supply of money in London for investment in new enterprises, and this scarcity must have its effect upon the markets of the world.

While these causes have undoubtedly operated to diminish the supply of money available for new enterprises, it might seem that they would not account for the indisposition to lend money to those who desired to take advantage of the prospective increase in the earnings of railroad properties. It has seldom been the case in this country that any one who desired to speculate at a time when greater activity in business was looked for, has not been able to borrow money upon the collateral security of his investments. We think that the uncertainty as to the future standard of value in this country is the true cause of this unwillingness to loan. It is common to argue that it will make no difference in the value of railroad stocks if we do come down to a silver basis. The reasoning is, that although prices will be higher, the charges that railroads will make for their services will be correspondingly increased. Their expenses will be nominally increased, but so will their receipts, and the standard that is used to measure them is immaterial. It follows, therefore, that the railways will be just as well able to pay the interest on their gold bonds as they are now, and that they will be able to pay increased dividends in silver. We fear this reasoning is fallacious. If we adopt the silver standard, it admits of no question that the prices of every article bought by railroads will rise, and that they will be obliged to raise the wages of their employees correspondingly. In so far as their obligations are for the payment of gold, they will have to buy gold at a premium. On the other hand, they are not in the situation of individuals with regard to raising their rates. To a considerable extent these rates are fixed by legislation that does not discriminate between gold and silver money. To an even greater extent they are fixed by custom, or, rather, the people have become so habituated to a progressive lowering of rates that they would be extremely impatient of an apparent reversal of this tendency.

If the railroads were thus compelled to make the same disbursements, measured by the gold standard, as at present, while they were able to secure only their present revenue, measured by the silver standard, it is obvious that their solvency might be seriously impaired. In many cases they would not be able to pay the premium upon the gold required to meet their coupons, and in all cases their rate of dividends would have to be reduced. In view of this possibility it is not to be expected that conservative bankers should lend gold, or its equivalent, upon collateral that is threatened with serious depreciation. The disasters that may follow a descent to the silver standard will be manifold, but the railroads are likely to suffer worst of all.

THE EFFECTIVENESS OF SUNDAY STATUTES.

THE city of Hartford, Conn., which recently gave us some striking results of an investigation of her system of out-door relief, is now supplying an object-lesson in the enforcement of the Connecticut Sunday laws. Until recently the fruit-dealers of the city, most of them Italians, were allowed to make sales and keep "open shop" on Sunday. This scandalized certain people, and on Sunday, July 19, on petition of fifty-eight merchants, the fruit-shops were closed by order of the city Chief of Police. The fruit-dealers then "combined," looked up the old State laws, and got out a petition of their own, in consequence of which on the following Sunday the cigar-shops were all closed and the druggists were also inhibited from selling cigars, soda-water, and candy. Sunday newspapers were not outlawed, the Chief of Police taking the curious view that they came under the "necessity and mercy" exception of the statutes, as they could not be bought on Saturday, while cigars and candy and even soda-water (bottled) could be bought.

Except, perhaps, Massachusetts, no State has so long and persistently as Connecticut held to Sunday laws, and rather severe ones, too. Her old "blue laws," though a satire and a fiction, had a certain meaning as such in their relation to the colony satirized, and suggested a popular tendency and feeling which to some extent prevail at this day. Every few years, by direction of her Legislature, a commission of skilled Connecticut lawyers makes a revision of her general statutes. The next Legislature sends the bulky revised volume to a committee, and, after examination, it is reported back and passed without much change. Neither the commission nor the committee ever dares to expunge or prune much the Sunday laws, though they admit them to be largely obsolete—this for fear that some strong rural Sabbatarians in the Legislature will discover the change, make a protest, precipitate a discussion, and possibly imperil the commission's whole work. It is instructive to see what are now these Connecticut Sunday laws which have come down from the spirit if not the letter of the far past, and have run the gauntlet of so many revisions.

They are not many in number, but in form are drastic and severe. Service of civil process is void between sunrise and sunset on Sunday. Persons present on Sunday, day or evening, at any concert of music or dancing "or any other public diversion" must be fined four dollars for each person and each offence. Net fishing on Sunday is prohibited under heavy penalty, but, strangely, there is no specific reference to Sunday fishing with a rod or hand-line. Sunday shooters, however, are directly reached by a section imposing a fine of from seven to twenty-five dollars, one-half the fine going to the informer; and the same penalty is imposed for having, "in the open air," implements for shooting on Sunday. The section relating generally to secular business or recreation is so sweeping that it deserves reprint *verbatim:*

> "Sec. 1569. Every person who shall do any secular business or labor, except works of necessity or mercy, or keep open any shop, warehouse, or manufacturing or mechanical establishment, or expose any property for sale, or engage in any sport or recreation on Sunday between sunrise and sunset, shall be fined not more than $4 nor less than $1."

The foregoing, with the Sunday liquor laws, are the important Sabbatarian statutes of Connecticut with two exceptions, one of which allows Hebrews who actually observe Saturday, and refrain from secular occupations on that day, to work on Sundays, provided they do not disturb the Christian habit of attending public worship. The result of this exception is, that many of the Connecticut Hebrews "keep" Sunday instead of Saturday, and a few months ago the Hebrew Rabbi at New Haven aroused considerable criticism in the Jewish Church by actually transferring to Sunday a part of his services. The other case relates to Sunday railroad trains, which, except "for necessity and mercy," cannot be run in Connecticut on Sunday, between sunrise and sunset, save by permission of the Railroad Commissioners, and are especially prohibited between the hours of 10:30 A. M. and 3 P. M. When,

about a year ago, the Commissioners allowed a Sunday passenger train between those hours to be put on for a few miles, between Hartford and New Britain—the train bearing many church-goers—they were attacked fiercely, and quickly withdrew their assent.

What is the practical effectiveness of these ancient statutes in the old Puritan State is of course the vital point. As a fact, while the Sunday liquor laws and some others are enforced, most of them are essentially obsolete. Connecticut sportsmen do not shoot much on Sunday, partly because it is "noisy"; but many of the working classes go fishing, and many of both the upper and lower classes go sailing—the City Attorney of New Haven himself, it will be recalled, barely escaping with his life from a sailing accident two Sundays ago. Driving for pleasure is nearly universal on the Connecticut Sunday, many church members enjoying it without criticism, though it is clearly against the law. As for the Sunday "occupation" law, as related to the sale of certain small commodities, its exceptional enforcement now in Hartford shows how commonly it is slighted. The general rule in Connecticut, notwithstanding her rigid statutes, is that so long as anybody does not violate public decency or public peace, he may disregard the letter of the Sunday laws. Hence we find them enforced only locally, spasmodically, or as a form of temporary retaliation, the latter being pretty common. They are a "theory" rather than a "condition," yet, queerly enough, are rather approved by the State judges on the ground that they have utility for occasional and extreme cases.

While this failure of Sunday statutes is conspicuous in Connecticut, there is no doubt that the situation is nearly the same in many States of the Union whose statute-books are lumbered up with a great mass of laws by no means confined to Sunday. Whether in the long run it pays to retain these old statutes for the sake of a very few extreme offences under them, and keep the people as a whole in constant contact with violated laws which therefore shadow better ones and, in a sense, tend to familiarize lawlessness, is a question as old as debating clubs, jurisprudence, and civilization. Every State and community makes its contribution to the problem, but Connecticut's experience is specially valuable because of her historical place as a Sabbatarian stronghold.

THE ATTITUDE OF THE SOCIALIST PARTY IN GERMANY.

Ever since the 1st of October, 1890, when, through the expiration of the famous Anti-Socialist Law, the Socialistic party of Germany was readmitted to an equal footing with the other political parties, its leaders have shown a remarkable circumspection and a truly statesmanlike reserve of action. None of the fears which their enemies a year ago brought forward as arguments for continuing the Bismarckian policy of repression have come true. The Socialistic party has not become revolutionary—it is becoming parliamentary.

The first occasion which very clearly brought out this fact was the so-called May demonstration. While the labor parties of all other European countries, regardless of the warnings of employers and governments, selected the first day of the month for this purpose, the German Socialists, in order to avoid conflicts, postponed the celebration to the following Sunday. And although this celebration was held on a very grand scale in all the principal cities of the Empire, accompanied, in true Teutonic fashion, by a great deal of singing, drinking, and speechifying, not a single offence against the public order seems to have occurred. Even in Munich, where the police had laid hands on a "Goddess of Liberty" which was to have formed the centre of the Socialist jollification, the holiday humor of the occasion was heightened rather than dampened through the replacing of this work of art by a huge pedestal bearing the inscription, "Goddess of Liberty confiscated by authority of the police."

More recently some attempts have been made by the more radical wing of the party to force the leaders into rash measures, but these attempts have been repelled with singular promptness and dexterity. Herr von Vollmar, the most prominent of the south-German Socialists, in a speech at Munich some weeks ago, boldly came out as a firm believer in patriotic principles in general and as a supporter of the foreign policy of the present Government in particular. Thereupon there was an outburst of indignation on the part of the Radicals, and a summary demand addressed to the official party leaders, Bebel, Singer, and Liebknecht, to expel Von Vollmar from the ranks, as an "opportunist and parliamentary coward." Bebel, although himself by no means agreeing with Vollmar, flatly refused to do any such thing, upholding, in a most powerful speech before an enormous Berlin audience, the right of individual and private opinion, and vindicating Von Vollmar's claim to be allowed to plead his cause before the next party convention, which takes place in October. But Herr Bebel went further than this: he seized the opportunity to define his attitude towards parliamentary life clearly and unmistakably.

"It goes without saying," he told his hearers, "that to-day our tactics must be very different from the time when our party consisted of only two or three persons. Now that we have come to be a large party, now that millions of laborers stand at our back, our responsibility, also, has grown immensely. The Radicals say we have nothing to expect from the present capitalistic society. I think those who hold this belief had better leave all parliamentary work alone, and stand up in the market-place and preach revolution. But I shall see to it that these gentlemen be induced to leave our ranks and to form a party of their own."

The latest proof of this growing tendency of the Socialist leaders to take a practical part in national legislation is the draft of a new party programme, drawn up by Herren Bebel, Liebknecht, and Engels, which, too, will be submitted to the October convention. This remarkable document, although maintaining the fundamental incompatibility between a "capitalistic" and a "socialistic" order of society, at the same time, by the precision of its language and the directness of its actual propositions, marks a most decided advance beyond the vague generalities of the old Gotha platform. Among its demands may be noted woman suffrage, transference of the prerogative of declaring war from the Crown to Parliament, international arbitration, secularization of the schools, replacing of standing armies by a militia system, substitution of public medical attendance for private practice, abolition of all indirect taxes, gradual introduction of the eight-hour day.

It remains, of course, to be seen whether the wholesome constructive policy of the present party leaders will prevail, or whether in the long run the more radical elements will get the upper hand. For the moment it seems as though the Socialist party were destined to take a most decisive part, not only in the emancipation of the working classes of Germany, but in the struggle for freedom in general.

THE INTERNATIONAL EXHIBITION AT BERLIN.

Berlin, July 17, 1891.

The fact that this summer's Internationale Kunst-Ausstellung in Berlin is of far less artistic importance than the exhibition in Paris two years ago really gives it its chief value, paradoxical as it may sound. The refusal of the Frenchmen of note to allow themselves to be represented is now an old story. A few have recognized that art is not bounded by the Franco-German frontier. There are one or two Bouguereaus, several Madeleine Lemaires, a Gaston La Fouche, and about half-a-dozen more. But these are all, and without the modern French artist the show unquestionably proves that the very backbone of modern art is left out. I doubt if the presence of his work could have so triumphantly established the leading rank he now holds in the art world as its absence. He has kept away only to make his supremacy more wholly realized. Not even in the Champ de Mars Salon has it been so evident to me that it is to France one must turn to-day for almost all that is vigorous, alive, and progressive in art.

As a whole, the exhibition is dull and lifeless. Most of the exhibiting nations can boast of a fair technical average, and even of one or two artists of individuality and power; the average, however, is that of men who have learned their trade very thoroughly, but who have no special use for their knowledge, and can only do what has already been done again and again. The exceptions to this rule stand quite alone, and have gained no following and formed no school; in their work French influence is often manifest. In the case of several countries, particularly of America, as I shall point out later, the exhibition is scarcely representative. But still there is not even a suggestion that in any one case a collection could be got together which would rival that supposed to be merely a national show seen this spring in the Palais des Beaux-Arts in Paris.

Naturally, as far as space goes, the Germans make the most important and imposing display. Each of the large towns, Munich, Berlin, Düsseldorf, Weimar, has one or more rooms to itself, but of these it is not easy to say which is dreariest, though perhaps the palm for commonplace may be awarded to Berlin. It is significant but melancholy to

find how completely the school of Munich, once so strong, has become a thing of the past. Though the Germans of note scattered through the different rooms are not in sufficient force to relieve the general dulness, one is very glad of the chance to see their work. The veteran Adolf Menzel is always interesting, especially in his marvellous drawings, sketches in pencil and water-color on red paper, several of which have been lent by the National Gallery. There are also three of his curious pictures, so carefully studied, so badly painted: one, of some state function, with the guests eating like so many pigs off gold and silver plate, is as chock full of observation and as keen in its rendering of character as it is funny in technique; and this is quite as true of the other two. Uhde, unfortunately, sends but one portrait, which is strong enough, and stands out very prominently in the Munich rooms, but is not very good for him, and cannot be compared to his wonderful scenes from Christ's life, one of which is in the Berlin Luxembourg; in many a small London gallery he has shown to far greater advantage. Liebermann does better, and among his four examples is the well-known "Flachsscheuer in Holland," which, probably because he is a Berlin man, the authorities of the National Gallery have seen fit to lend for the occasion, though the same consideration has not been extended to Uhde, who belongs to the Munich, or South German, group of artists, little loved in Berlin. Arnold Böcklin may practically be classed with the Munich men, though one is hardly sure whether he is really German, Swiss, or Florentine. Still unknown in England, he is as fantastic and allegorical in his subjects as any English Watts, or Richmond, or Holman Hunt. But he does not believe imagination can ever be an equivalent for bad technique, and he paints with a knowledge and a fine feeling for color and decorative effect of which the Englishmen cannot boast. There is a mermaid by him here, which is delightful in the original and effective treatment of the long-scaled tail upon which gulls are resting, and yet the flesh-painting in the upper part of the body is sound and naturalistic enough to satisfy a Manet or a Roll. His power in rendering character, too, is seen in a Susanna, simply inimitable in the lecherous leers of the old elders who have discovered her at her bath. Work of this kind helps to explain that when one objects to the would-be idealists in England—the men who despise the life about them—it is not because of their choice of subject, but because of their technical shortcomings.

There are several other Germans—Piglhein, Franz Stuck, Gebhardt, for example—who show the same tendency in their selection of subject, and, almost invariably, much excellence in their treatment of it. Indeed, some of the best work in the German division is found among them. I do not include in their number the celebrated Ferdinand Keller, whose huge apotheosis of the Emperor William hangs conspicuously in a gorgeous circular gallery set aside for portraits of royalty. In his picture, the mixture of realism and would-be poetry degenerates into the ridiculous. The Kaiser, in royal robes, is surrounded by allegorical creatures in no clothes at all, and the whole conception, whatever it may mean, panders to the vulgar taste of a people who can pride themselves on the showy pretentiousness and inartistic splendor of their capital. The court portraits, too many painted by the photographic Werner, are as depressing, with the exception of a good strong pastel of the young William by Lenbach, yet they have evidently given the German portrait-painter his standard. The German landscape-painters, except Paul Vorgang, Max Ulb, and one or two more, are feeble and insignificant to a degree incredible in these days of brilliant *plein-airistes* and impressionists. Apparently Germany has not yet awakened to a knowledge of the revolution the last few generations have worked in the art of landscape-painting. Of course there is good work by Lenbach, Meyerheim, Achenbach, and the other German painters of reputation, but it shows only the old traditional motives and methods; and the same official conventionality and formal correctness which prevail in the Champs-Élysées Salon are the characteristics of the galleries devoted to Germany.

American exhibitors have been received with every distinction. America is given the second place—immediately after Germany—in the catalogue; American pictures have been hung to advantage. But German civility cannot succeed in making the American department representative as one would like to see it. The painters who contribute are principally those of a certain little clique who happen to be just now in Paris. A clique that is led by Melchers and MacEwen and Walter Gay is clever enough as far as it goes, but it does not go very far. In it one need not look for those artists who won for American art its present position in Paris. There is nothing from Whistler, Alexander Harrison, Sargent, or Dannat, nothing from such men as Chase and Duveneck. Painters who studied in the Paris of an older generation are here, but the presence of Bridgman and Stewart makes one the more conscious of the absence of Ridgway Knight. Decidedly the most important contribution is Melchers's large church interior, of which I had so often heard but which I had never seen before. It is worthy of the fame it has brought its painter; it is full of truth and character in the study of the men and women, of sound painting in the working out of the details—the chairs and tables, and, above all, the communion cloth, which is a marvel of technique. But even in this his masterpiece I am conscious of the tendency, shared by Melchers with the men of his school, to see everything in the same way, and to let certain little tricks, which too speedily can become so many conventions, take the place of original observation of nature. All the faces are painted with exactly the same colors: the flesh of old and young alike is produced with an unchanged palette, the light is that which fills all his pictures. Moreover, there is a suggestion of the painted photograph, which has been the undoing of the Newlynites in England. Melchers is a far greater man than Stanhope Forbes, but, if he is not careful, his work eventually may be marred by the blemishes which of late are so prominent in that of the English painter. Mr. MacEwen has his clever "Ghost" of the Salon of two years ago, his "Sisters," strangely without the light or atmosphere or qualities which usually distinguish his pictures, and two little canvases which are proofs of his technical skill, but which the unkind critic might suggest savored of the pot-boiler species. Of Mr. Humphrey Moore's three large works and twenty-one small sketches, a few would have been cheerfully spared for the same number of examples from those artists who are so sadly missed. The other most notable American contributions are Bisbing's small study of Dutch cattle; Walter Gay's two pictures, dated respectively 1886 and 1889, showing the marked progress he made in the three years; Charles Sprague Pearce's three canvases, one a weak imitation of Carrière; and Julian Story's good strong portrait of his father.

But it is in the exhibit of the Society of American Wood-Engravers that American art is seen at its best: wood-engraving, at least, is adequately represented. There are several cases of the engravings of Cole, Kruell, Closson, Whitney, Kingsley, Davidson, and all the other well-known men whose work appears monthly in our magazines. Here are the principal illustrations which have been published during the last few years in the *Century*, *Harper's*, and *Scribner's*. Almost all are carefully printed on India paper, and they form one of the most interesting compartments in the exhibition. For delicacy and refinement American wood-engravers easily hold their own. But for big, bold, direct work, probably because they have never had the same opportunity, they show nothing which begins to equal the large blocks of such men as Closs of Stuttgart or Hönemann and Ettel of Berlin, Klinkicht of Freiburg. A little group of Warsaw engravers are also rapidly coming to the fore, and there are few things better than the large engravings of Nicz and Klein. Baude and the other Frenchmen, of course, are not to be seen.

The English department is a disgrace to England. With the exception of a portrait by Frank Holl, an Alma-Tadema, and some drawings by Alfred Parsons, the only work which redeems it from hopeless commonplace is really by Americans, Shannon and Abbey, who, for some reason or another, choose to class themselves with Englishmen, as Carl Marr does with Germans. This is not so surprising in the case of Shannon, whose two portraits stand out here with unusual strength; throughout his entire art career he has identified himself with England rather than with America. But it is another matter with Abbey, and I can find really no excuse, unless it be sheer benevolence to England on his part, for this public denial of his own nationality. Alongside his countrymen, his drawings, which are almost all marked *Sold*, would no doubt have been disposed of as readily. To those who answer every objection to the Royal Academy by saying that, after all, the greatest British painters are Academicians and Associates, this exhibition would be a convincing proof of the fallacy of their argument. A few of the younger men, whether of Glasgow or London, could have given the British collection the artistic stamp with which Sir Frederick Leighton and Millais and Richmond and Watts and the other leaders of Burlington House have not succeeded in marking it. It is amusing to find how completely the Germans have failed to appreciate the holiness of the English Neo-Gothic school. Walter Crane is badly skied, while Holman Hunt's "Triumph of the Innocents," instead of the drapery and artificial lighting with which it was honored in Bond Street and Whitechapel, is hidden away in a remote corner behind the American wood-engravers, whose work, in the eyes of Mr. Hunt, is one of the unspeakable blasphemies of modern art!

Of the other countries, Italy and Denmark and Poland are by far the most interesting; Italy chiefly so because of the work of Segantini. This painter, who was seen for the first time in London at the Italian exhibition of two summers ago, is without doubt the most distinguished of all the contributors. There is not one other of such vigorous individuality, of such daring originality. He is the first man who has ever ventured to paint Alpine colors and light and effects as they really are—to give the strong black blue of the Alpine sky, the blinding white of the peaks that rise against it, the hard clearness of Alpine at-

mospheres. His technique is as strikingly original. When looked at closely, the paint seems to be laid on the canvas almost like mosaic work or an arrangement of fine colored glass threads, and yet, seen at the proper distance, nothing could be broader than the result he obtains. Whether his technical methods require infinite time and patience, or have the breadth and freedom of the effect they give, it would be impossible for any one who has not seen him at work to say. He fairly towers above the other Italians, though there are three very good and decorative Michettis and two fine Favrettos. One of these, belonging to the King of Italy, is the last work of the painter, and is not quite finished, but, for that very reason, perhaps, it has more action and "go" than almost any Favretto I have ever seen.

The interest in the Danish and Polish departments comes less from individual contributions than from all the work taken collectively. In both countries, painters, even when they do not achieve any very great distinction, evince a desire to see things for themselves, and to express them in their own way, which is delightfully refreshing, and which promises that when the man of genius really comes, he will take the art world by storm. This is in strong contrast to the prevailing tendency among Austrians to turn out the traditional "machine," which has already travelled to all the big exhibitions, and which, while it is a marvel to the multitude, is but weariness to the artist; or among Spaniards to imitate to satiety their own masters. One wonders if, in a few years' time, these second-hand Monets and Manets will seem as utterly old-fashioned and lifeless as the second-hand Fortunys do now. In the Russian division, the work which attracts most attention does so chiefly because of sentimental or literary reasons. The name of Marie Bashkirtseff has not yet lost its interest for the present generation, and indeed one of her two pictures, the portrait of a lady smiling, has more than the artist's personality to recommend it to notice; the other is as bad as the portrait is good.

The Maris family, not seen at their best, however, Mesdag, Israels, Blommers, alone would insure the artistic excellence of the Dutch galleries, where, moreover, the general level attained is very high. And much the same is true of Belgium. The average Belgian artist shows great technical proficiency, while there are several prominent painters who rise even above this high average. Fernand Khnopff of Brussels, for example, whose cleverness cannot be denied, though, with some other of his countrymen, he too often condescends to mere tricks and devices to advertise this cleverness; Albrecht de Vriendt of Antwerp, whose careful and well-studied pre-Raphaelite designs might give a few useful hints to Burne Jones, Walter Crane, and the other lights of the New Gallery; and Émile Claus, who has the best landscape in the entire exhibition. But the Belgians excel above all in sculpture, as, indeed, do the Germans, and it is curious to see how much more life and vitality there is among the mere handful of sculptors exhibiting than among the great multitude of painters; the former seem to have emancipated themselves from the conventions and traditions of the schools, and to be seeking to become something more than mere weak reflections of their masters. The only statue of note by an American sculptor, however, is Mr. Paul Bartlett's "Indian Dance."

I wish I had space left to speak in detail of the remarkably good work which Germans are doing in the revived art of illumination. There are illuminated diplomas and addresses quite equal to the old manuscripts in their beautiful lettering and their page decoration, in which is found the same combination of conventional design and realistic illustration used by the old illuminators. It is to be regretted that the *Münchener Kalender*, the finest popular work of this kind now being done, is not represented. I must also add just a word of praise for the massive and effective cartoons in charcoal and pen produced by a German architectural draughtsman, Bruno Schmilz by name, who has had the good sense to realize that the drawing of architecture for an architect need not necessarily be absolutely devoid of interest to the outside public.

N. N.

LAND TAXATION IN JAPAN.

Tokio, July 8, 1891.

One of the most interesting phases of Japan is her system of land taxation. Like so many other institutions to-day existing in this country, her method of taxation is a curious mixture of past and present—to a great degree the product of the old Tokugawa régime, but profoundly modified to suit modern conditions. During the feudal period, taxes were for the most part paid in kind by the cultivators of the soil, and were in fact a form of rent due to the Daimio, or lord of the province. The staple food of the country being rice, the taxes were almost invariably collected in that commodity. The amount paid, however, was not fixed by any national measure, but varied from province to province, depending on local customs, the humor of the Daimio, or other circumstances. Still, as a rule, the share required was seldom less than one-half the total crop, and it sometimes was as much as two-thirds. Moreover, as the established policy of the Tokugawa Government was to preserve and fix the status of all classes and conditions of men, it laid down a multitude of vexatious and arbitrary rules for the farmer, all tending to rob him of every spark of enterprise and progress. Without Government permission he could neither increase nor decrease the amount of his cultivated land; nor could he change from the cultivation of rice or paddy field (*ta*) to that of dry field (*hata*). All the conditions of land cultivation were so carefully prescribed that the farmer had nothing to do but follow a routine that deviated little from generation to generation. It was not likely that, under such a Procrustean system of land tenure, population could advance either in wealth or in numbers; and right here is probably the explanation of the fact that the population of Japan increased so slowly during 250 years of undisturbed peace.

With the Restoration there came a great change, not only in the general status of the farmer, but in the conditions under which he cultivated the soil and paid his taxes. All the previous iron rules imposed upon him were abolished; he was given perfect liberty to buy and sell land or adopt new modes of cultivation. The system of payment in kind to each provincial lord was replaced by a national land-tax paid in money. About 1876, the value of every piece of cultivated land was appraised according to a complex and somewhat arbitrary method of valuation, and on this capitalized value a land-tax of 3 per cent. was imposed, two years later reduced to 2½ per cent. This tax, though perhaps not so heavy as in the feudal period, is still a tremendous burden on the farmer, especially when we take into consideration the various local taxes he has to bear, as well as his general economic position.

Besides the high rate of the impost, one of the principal objections to the tax is that it falls so unequally on the different districts of Japan. Since the year 1876, when the terrier was drawn up, land values, owing to the extension of railways and other improvements, have undergone great changes. The result is that the cadastre has become antiquated, and stands in great need of revision. Last winter a reform of the whole system was demanded in the lower house of Parliament, and it will probably be carried in the next session.

Barring the discrepancies in the tax that have sprung up during the last fifteen years, the rate of 2½ per cent. on the value of the land takes, on an average, more than 30 per cent. of the annual crop of the farmer. And when we add to the demands of the national land-tax the burden of the various local taxes and charges, the farmer as a rule has but little more than one-half his crop left, especially if it be rice. Indeed, in many districts of Japan the total amount yielded by the farmer to the Government, national and local, is estimated at even more than 50 per cent. of his crop. Naturally the land-taxes contribute the largest amount of revenue to the treasury, furnishing more than 40,000,000 yen out of a total national receipt of about 75,000,000 yen, and nearly 20,000,000 yen more in the shape of local taxes.

This statement, however, gives no indication of the true condition of the Japanese farmer. In this country, where the Government performs so many functions which in America are left to the individual, a high rate of taxation is not necessarily an indication of poverty or of a low standard of living. With a sufficiency of land and a variety of crops, even the Japanese farmer can live comfortably, especially if a good fraction of his land is dry field (*hata*), on which he generally raises two crops a year. Very few of the farmers of Japan, however, are in this condition of tolerable comfort. The amount of the cultivated land of the Empire is so small (less than 12 per cent. of the whole area) and the population so large (over 40,000,000) that the land belonging to each family is absurdly insufficient. The average holding is less than two acres, subdivided into smaller parcels, which vary in size in different provinces, but average nearly one-eighth of an acre each. Thus, to picture a typical Japanese farm, one must imagine a piece of land less than two acres, cut up into about fourteen pieces, or bits, each separated from the other by a raised path of earth. Even then the picture is incomplete, since the bits belonging to one farmer are not necessarily adjacent to each other, but frequently many a rood apart. Such a beggarly amount of land, even under the most perfect system of cultivation, cannot of course yield sufficient to bring up a family according to Western standards of comfort. The idea of wages, or remuneration for labor, scarcely enters the Japanese farmer's mind; he is content if, after paying his taxes, he can in some rough fashion merely make both ends meet. At any fair rate of wages, farming is carried on at a loss in Japan. The farmer seldom eats the rice he grows, generally using barley or millet as a cheaper means of subsistence. His expenditures are on an infinitesimal scale; the clothes of the family are often heirlooms handed down from generation to generation; and as for saving anything from year to year, the practice is so little known in this country as hardly to be considered a virtue.

A system of taxation that demands 40 or

even 50 per cent. of the annual produce of agricultural labor, especially when carried on under such circumscribed conditions, would be deemed infamous in most countries of the world. In European countries a land-tax of 10 per cent. is considered high, and is perhaps nowhere strictly levied. Yet, for the present at least, the Japanese Government has no other resource. Under the present treaties with foreign nations, she is limited to a 5 per cent. duty on imports and exports. Thus her receipts from customs are insignificant, and those from other sources, as from the tobacco, beer, and income taxes, are insufficient, and Japan is driven to resort to the feudal land-tax. It is not likely, however, that this state of things will continue much longer. Under the present representative institutions of Japan, the farmers, hitherto tractable, will begin to ventilate their grievances and demand a reform of the unjust land-tax. They constitute one-half of the population, and bear practically three-fourths of the taxes. As soon, therefore, as the Parliament becomes an established institution in Japan, we may expect a determined agitation for the reduction of land taxes, for which at present there is probably no exact parallel in any civilized country.

MARBOT IN THE AUSTRIAN CAMPAIGN.

PARIS, July 21, 1891.

AFTER the storming of Saragossa, the mission of Lannes was accomplished; he returned to France with Marbot, who, notwithstanding his wounds, had to travel with him as a courier or postilion. They arrived in Paris on the 2d of April; Marbot almost immediately left for Strasbourg and Augsburg. Napoleon was beginning a new campaign; he gained the victory of Eckmühl, and took Ratisbon by storm. Marbot took a leading part in the assault of this town. It was before Ratisbon that Napoleon was slightly wounded in the foot. Larrey examined the wound and allowed Napoleon to remount his horse immediately. The enthusiasm of the army was intense; Napoleon passed it in review, and for the first time distributed *dotations*—that is to say, pensions—to simple soldiers.

"An old grenadier who had made the campaigns of Italy and Egypt, not hearing his name pronounced, left the ranks and asked for the Legion of Honor. 'What have you done,' said Napoleon, 'to obtain this recompense?' 'It was I, Sire, who, in the desert of Jaffa, in a dreadful heat, offered you a watermelon.' 'I thank you again for it, but that is not worth the Legion of Honor.' The grenadier, who, so far, had been as cold as ice, flew into a paroxysm, and said with great volubility: 'Do you count for nothing seven wounds received at the bridge of Arcole, at Lodi, at Castiglione, at the Pyramids, at Saint Jean d'Acre, at Austerlitz, at Friedland—eleven campaigns in Italy, in Egypt, in Austria, in Prussia, in Poland?' Here the Emperor interrupted him, and, imitating his vivacious language, said: 'Well, well, well! how you scream! Now you come to essential points; you end where you ought to have begun; this is better than your watermelon.'"

By this familiarity, the Emperor made himself adored by his soldiers; "but," says Marbot, "such means ought to be employed only by a chieftain whom many victories have made illustrious; they would hurt and discredit another general."

At the storming of Ratisbon, two small columns of assault had been repulsed and completely destroyed; Marbot took part in the third, and was the first, with Labédoyère, to gain the rampart of the town, in view of the Emperor Napoleon and of the whole army, who saluted them with an immense acclamation. "It was one of the finest days of my life."

Whoever has gone from Munich to Vienna must remember the fine town and abbey of Mölk, on the Danube. "It was at Mölk," says Marbot, "that I accomplished the feat of which I am the most proud, because the dangers which I had so far incurred had been imposed on me by the execution of orders given by my chiefs, but there I braved death voluntarily to serve my country and my Emperor, and to acquire a little glory." The Danube was very high; it had risen till, at Mölk, it was a league wide. Napoleon, who was dining in the convent with the abbé, Lannes, and the other marshals, sent for Marbot. It was raining; the night was dark; on the other side of the river were seen the lights of the Austrian camp. Lannes said to Marbot: "The Emperor wishes to know if the corps of Gen. Hiller is on the other side or is still on this side. It is necessary that a man of pluck should go over, seize a soldier, and get the truth out of him; I have told the Emperor that you would go." Napoleon added: "Observe that this is not an order which I give you; I only express a desire. The enterprise is perilous, and you will not displease me if you refuse. Reflect a few moments, and tell me frankly your decision."

At the proposition of Lannes Marbot felt himself bathed in cold sweat. He did not hesitate, however; he was proud of having been chosen, out of 200,000 men, for such a mission. "I will go," said he. The Emperor pinched his ear, which was his greatest mark of satisfaction. Lannes said: "There is a brave soldier!" The execution of the project was not easy. Marbot procured a boat, took five soldiers, five boatmen, who were carried away by force, and the syndic of the boatmen of Mölk. The boat reached the other side of the river with difficulty. A soldier was coming down to get water; the soldiers concealed under the branches of willows seized him, and threatened to kill him if he uttered a word. Two other Austrians were seized in the same way; but soon was heard a cry of "Wer da?" No answer. The boat was seen by the Austrian pickets, and put off with as much haste as possible. A tremendous fusillade began; the artillery was directed against the small craft; a single shell would have sunk it. The inundation had covered the river with broken pine-trees, and it was difficult to steer. Marbot landed two leagues away from Mölk, not knowing whether he was among friends or foes. His party was fired upon; he screamed, "Vive l'Empereur!" and found himself among Frenchmen. On his return, he ascertained that Hiller was on the other side of the Danube, and had been able to join Prince Charles. He saw the Emperor, and brought him his three prisoners. "I am well satisfied with you, *Chef d'escadron* Marbot." These words were equivalent to a promotion. He asked Marbot to breakfast, and gave the Legion of Honor to his five grenadiers. He gave a large sum of money to the five boatmen of Mölk.

Two days afterwards the Emperor was before Vienna; twenty-seven days after having left Paris, he was in the capital of Austria. He took for his residence the castle of Schönbrunn, which is two miles from Vienna. Marbot enters into many details of the operations which took place on the Danube on the occupation of the island of Lobau. During the battle between the French army and Archduke Charles at Essling, Marshal Lannes was severely wounded in the legs by a cannon-ball; Larrey, the head surgeon of the army, thought an amputation necessary. After the operation Napoleon came to see Lannes. "You will live, my friend, you will live," said he to the Marshal, who merely answered: "I hope so, if I can still be useful to France and to your Majesty." Lannes was born in 1769 at Lectoure, in Gascony. His father was a dyer; he helped his father in his trade, and, when the Revolution broke out, all his knowledge consisted in reading, writing, and a little arithmetic. He enlisted in 1791 in the first battalion of the volunteers of Gers, and by the suffrage of his comrades he became a lieutenant. He began to study and spend many of his nights in trying to remedy the defects of his education. He rapidly became a colonel, and when Napoleon made his Italian campaign, he soon recognized Lannes's merit. Lannes followed him to Egypt, and returned with him. He saved the French army at Montebello and thus insured the victory of Marengo. After the death of Lannes, Marbot joined the staff of Masséna, with the grade of *chef d'escadron;* he was created at the same time Chevalier of the Empire, with a stipend of 2,000 francs a year. Soon afterwards occurred the battle of Wagram.

The Memoirs of Marbot in the second half of the second volume assume the tone of ordinary military memoirs. His position allowed him to see more than many, and he cannot resist the temptation of telling all he saw. We must pass a little rapidly over the account of the military operations, and insist more particularly upon the incidents which touch the character of the persons engaged in these Homeric struggles. Of all the marshals of the Empire, Marbot seems to have particularly liked Augereau, and particularly disliked Masséna. At the battle of Wagram, Masséna's corps was at first defeated. "The Marshal, from his carriage, saw the danger which threatened us, and calmly took the necessary dispositions to maintain in good order the three divisions which had not yet been broken into. He had been obliged for that to send so many aides-de-camp to his generals that he had by him only the young lieutenant, Prosper Masséna, his son. He soon found that the soldiers of Boudet's division, pursued by the Austrian cavalry, were being pushed back on these three divisions, and in throwing themselves into their ranks would produce a general rout. To prevent this catastrophe, the Marshal had to order the generals and colonels to send the runaway soldiers to the island of Lobau." The mission was difficult, as the aide-de-camp would have to cut his way through a disordered multitude. Marbot's horse had been half burnt in some cornfields which had taken fire, and could hardly move. The etiquette of battle for the aides-de-camp consisted in taking their places, when they returned to the Marshal, furthest from him. Masséna, who had been carrying an order and was returning, took his place. Nevertheless the Marshal, who should have sent his son first, bade Marbot fulfil the dangerous mission which has just been explained. Masséna was so candid as to tell him, "You understand why I don't send my son, though it is his turn to go. I am afraid they will kill him. You understand?" Marbot understood too well, and started at full gallop towards Boudet's division. Young Masséna felt indignant at his father, and followed Marbot.

Masséna, who was slightly wounded, was obliged to remain in a carriage during the battle of Wagram, and during the combats which followed he had his own postilions. These two men showed great intrepidity. They were for eight days exposed to the greatest

dangers, especially at Wagram, where hundreds of men were killed near their carriage. A ball went through the coat of one of them, another ball killed one of their horses. The whole army admired their bravery, which was of the most voluntary sort, as they were not soldiers. The Emperor said to Masséna: "There are here 300,000 fighting on both sides. Well, would you know who are the bravest? They are your coachman and your postilion, as we are all here to do our duty, while they have no military obligations." The Marshal had a very large fortune: he received 200,000 francs as commander of an army, 200,000 as Duc de Rivoli, 300,000 francs as Prince of Essling. Masséna, however, waited two months without thinking of doing anything for these two men. One evening he was with his staff and announced that he would give to each 400 francs. Marbot imprudently asked, "400 francs a year?" Masséna was furious, and said, "Do you want to ruin me?' He became even more furious when, a few days afterwards, the Emperor, who was very fond of a joke, and who, besides, was extremely generous, maliciously complimented Masséna for having given to each of the two men who had taken him over the battlefields a pension of 400 francs. It is easy to imagine that such incidents did not ingratiate Marbot with Masséna nor Masséna with Marbot; but they remained together, and we shall see Marbot's criticisms assume a more important character when we arrive at the very important affairs of Portugal.

In 1810, Marbot found himself in Paris, and he was married to a Mlle. Desbrières. The winter of 1810 was very brilliant; Napoleon had divorced Josephine and married the Archduchess Marie Louise of Austria. Marbot took part in the festivities of the occasion. The ardor for pleasure of the brilliant officers of Napoleon's army was all the greater because they had the conviction that each spring would bring a new campaign. Marbot accompanied Masséna to Portugal in the spring of 1810, and his account of the Peninsular campaign is full of interest. He left Paris with sombre forebodings, which were only too well justified by the event.

Correspondence.

GOLDWIN SMITH AND THE JEWS.

To the Editor of The Nation:

Sir: The appearance of Goldwin Smith's essay on the "Jewish Question" as the leading article in the leading American review, seems to me at this present time very unfortunate. There is no "Jewish Question" except so far as the madness of a modern Nero, wielding absolute power over more than a hundred million human beings, has made one. Not that other nations than Russia might not possibly be better off if there were fewer Jews among them, or if those there are were put under restrictive laws; but all other great nations have committed themselves irrevocably to the principle of religious freedom and equality, and it would be found impracticable to discriminate against the Jews on the ground of race in the way in which the United States discriminate against the Chinese.

Aside from Russia the Jews are indeed oppressed and sometimes persecuted in Morocco and in Rumania; but the Moorish Government of the former country will soon fall under West-European control, when the Jews, who in language and habits are pretty nearly European, must get the upper hand, and the Rumanian situation is but part of the Russian problem, for the ill-will of the people on the lower Danube is directed mainly against Jews who have been thrust upon them from Russia, not against the old settlers of the "Spanish" ritual, who are generally on the best footing with their Gentile neighbors.

The "question" in Russia has arisen since the mischievous dynamite shell of a Nihilist ended the life of Alexander II. and put the lives of one-fourth of the globe into the keeping of a gloomy, unfeeling monster. The tortures which he inflicts upon his Slavic subjects, as described in the letters of Kennan, have curdled the blood of English and American readers. His Semitic subjects he is pleased to treat in a different way: he gives them the choice between starvation and exile. They flee by thousands and by tens of thousands to Austria, to Turkey, to England, to Italy, to the United States, to the Argentine Republic. In some countries the sudden inroad of large numbers of often penniless exiles must cause much unpleasantness—thus we find that, in East London, tailors and shoemakers complain of the sharp competition made by these new-comers in the labor market; but all this is only a part of the one Russian question, which ought, if possible, to be met in Russia.

Thus far, the whole civilized world has been practically at one in its protest against the cruelties of the Muscovite tyrant. Even the anti-Semitic politicians of Germany and Austria have not justified the horrors perpetrated at Moscow. It was left for the New York *Herald* to break the monotony of this universal protest, and to distinguish itself by that journalistic enterprise which found, through its St. Petersburg correspondent, that there was really no persecution to speak of. We now meet a first-rate publicist writing in a first-rate review something which, no matter how much he may disclaim the intent, can only be taken as an argument in defence of a stupendous and still progressing crime. Long before this, I have no doubt, a résumé of Goldwin Smith's lucubrations has been cabled to the *Novoe Vremya*, in order that the advisers and tools of the oppressor may find comfort in the concurrence of a British writer and an American magazine. Some have foolishly imagined that Goldwin Smith's pen has been hired with Russian rubles. I believe nothing of the sort. He is simply filled with hatred for those whom he thinks too weak to resist oppression, whether they be Irish rack-rented tenants or Jewish artisans and students in Russia. If Prof. Smith really understood the strength, the toughness, the persistence of the Jewish character, he would feel as much love and admiration for the "chosen people" as he now cherishes hatred and contempt. L. N. D.

Louisville, Ky., August 1, 1891.

THE NEW KENTUCKY CONSTITUTION.

To the Editor of The Nation:

Sir: It may be interesting to your readers to know something of the new Constitution about to be adopted by Kentucky. That it will carry on Monday next is practically assured. The *Courier-Journal*, the very head and front of the opposition, withdrew from the fight some weeks ago. The first material change to note is in the Bill of Rights, section 3, which provides:

"All men, when they form a social compact, are equal; and no grant of exclusive, separate public emoluments or privileges shall be made to any man or set of men, except in consideration of public services; *but no property shall be exempt from taxation except as provided in this Constitution; and every grant of a franchise, privilege, or exemption shall remain subject to revocation, alteration, or amendment.*"

The italics show so much of this section as is new. The change is made to prevent property from being exempted on the pretence that "public services" are rendered, and to stop the granting of "exclusive privileges" which cannot be revoked, altered, or amended. Our experience in these two directions has been a painful one.

In the legislative department, section 48, the Constitution provides that any bill appropriating money or creating a debt shall, on its final passage, receive the votes of a majority of the members of both houses. Section 62 puts a stop to local and special legislation, which in Kentucky usually consumed six or seven months of the Legislature's time and vast sums of the taxpayers' money.

Probably the change that will interest the lovers of honest elections more than any other thing the Convention has done is the addition to our chapter on Suffrage and Election. Section 154 provides:

"In all elections by persons in a representative capacity, the voting shall be *viva voce* and made a matter of record; but all elections by the people shall be by *secret official ballot*, furnished by public authority to the voters at the polls, and marked by each voter in private at the polls, and then and there deposited. The word 'election' in this section includes the decision of questions submitted to the voters, as well as the choice of officers by them. The General Assembly shall make provision so that persons illiterate, blind, or in any way disabled may have their ballots marked as herein required."

It remains to be seen how effective a law the General Assembly will provide under this section. Happily, the Constitution itself requires that the ballot shall be "official" and furnished by public authority. The General Assembly is required to provide for the registration of the voters of cities and towns having a population of 5,000 or over.

Lotteries are for ever prohibited by sec. 235, which reads:

"Lotteries and gift enterprises are forbidden, and no privileges shall be granted for such purposes, and none shall be exercised, and no schemes for similar purposes shall be allowed. The General Assembly shall enforce this section by proper penalties. All lottery privileges or charters heretofore granted are revoked."

There are other new provisions, some good, others the wisdom of which is doubtful, but space forbids their mention. Those noted above seem to be the most important changes made by the Convention. The question of taxation, always a difficult one, was disposed of by providing that real and personal property should be taxed at the same rate. The General Assembly (sec. 257) may provide that in civil actions, when three-fourths or more of the jury concur, a verdict may be returned; the jury to consist of twelve persons. ***

Louisville, July 31, 1891.

PROTECTION TO AMERICAN AUTHORS.

To the Editor of The Nation:

Sir: Uncle Sam seems to have mended his drag-net of late, and the fish must be small-fry indeed that now go through its meshes. A learned society of Scotland, in pursuance of its liberal policy, mailed to me fifty author's copies of a paper which had been honored by

admission to its *Transactions*. The bundle came to the local post-office this week opened, and accompanied by a slip giving the package a "commercial value" of twelve dollars, and assessing a duty of 25 per cent. The local collector of customs thinks that I am resisting the just claims of a hard-working Government in delaying payment; but curiosity as to how they discover the commercial value of a paper whose real audience might, I think, be numbered on the fingers of the two hands, has led me to appeal the case. X. Y. Z.

Notes.

ROBERTS BROS., Boston, will publish in the fall 'A Calendar of Sonnets,' by the late Helen Jackson, illustrated by E. H. Garrett and Émile Bayard; and 'Last Words,' a final collection of the stories of the late Mrs. J. H. Ewing.

Lee & Shepard announce 'Wood Notes Wild,' notations of bird music by Simeon Pease Cheney; 'The Golden Guess,' essays by John Vance Cheney; 'Gestures and Attitude,' an exposition of the Delsarte theory of expression, by Edward B. Warman; 'A Bundle of French Studies,' by Maria Ellery Mackaye; and 'The Woman's Manual of Parliamentary Law,' by Harriette R. Shattuck.

Benj. R. Tucker will publish shortly 'Russian Traits and Terrors,' by a number of contributors to the *Fortnightly Review*.

The Student Publishing Co., Hartford, Conn., have in press 'Bibles Within the Bible,' being the text of Genesis and the first twenty chapters of Exodus according to the Revised Version, in varieties of type to exhibit the constituent sources according to the analysis of the best critics, with notes explanatory of the phenomena of redaction. The author is the Rev. B. W. Bacon.

Charles Scribner's Sons have in preparation a series of concise biographies of the men whose systems have marked successive stages in the progress of education, from Aristotle to Dr. Arnold. It will be edited by Prof. Nicholas Murray Butler of Columbia. Mr. Thomas Davidson will undertake Aristotle; J. G. Fitch, Pestalozzi; J. Courthope Bowen, Froebel; Prof. Butler, Horace Mann. The same firm will issue another volume of 'Children's Stories in English Literature'; and 'The Business of Life,' by the author of 'How to be Happy, though Married.'

A new prospectus of Funk & Wagnalls's 'Standard Dictionary of the English Language' gives a list of the editorial staff, which is not lacking in eminent names, and exhibits some original features which it will certainly be desirable to have in a dictionary, if not in every one. Mr. Teall, whose work on the 'Compounding of English Words' we lately noticed, will be charged with the oversight of this important matter—a complete innovation, we imagine. So is the use of the German double hyphen to indicate compounds, the mode of expressing the pronunciation, etc.

The well-known Danish publishers, Brödrene Salmonsen, announce a new Scandinavian encyclopædia, the first part of which will appear in the spring of 1892 under the title of 'Salmonsen's Store Illustrerede Konversationsleksikon for Norden.' This work will be founded upon the recently completed fourth edition of Meyer's German 'Konversationslexikon,' the use of the 4,000 illustrations to which has been secured. Many of the German articles will be translated, with special reference, however, to Scandinavian interests. Over a quarter of the contents will be devoted to Denmark and Norway, an amount of reading matter equalling the whole extent of any previous Scandinavian encyclopædia. The chief editorship will fall to Chr. Blangstrup, whose book on Christian VII. and Caroline Mathilde has already been favorably noticed in these columns. Mr. Halvorsen, the editor of the 'Northern Biographical Dictionary,' will have charge of the Norwegian department, and the work of translating from the German will be supervised by L. Stange, who is himself an experienced translator. Among the 150 assistants already announced in the preliminary circular are many of the most prominent littérateurs and scientists, both of Denmark and Norway. The work will be published at intervals of two weeks, the subscription price for each part of three sheets being about 15 cents, or $3 25 per annum. When completed it will include 18 volumes, containing about 6,000 illustrations, maps, plans, etc. It is intended, furthermore, on the completion of the work, to issue at convenient intervals supplementary volumes, which will serve to keep it up to date. While this encyclopædia, as its title implies, is intended particularly for Scandinavian readers, it cannot fail to be of great value to all familiar with the Danish language and interested in the affairs of the North.

The seventh volume of 'Chambers's Encyclopædia' (Philadelphia: J. B. Lippincott Co.) carries on the work from Maltebrun to Pearson. The freshness of the editing is attested by mention of the new Life of Laurence Oliphant and by the record of Parnell's discomfiture down to his defeats at North Kilkenny and North Sligo, and the striking off of his name from the burgess-roll of Edinburgh. Notable articles are Canon Isaac Taylor's "Names," R. H. Hutton's "Newman," P. G. Hamerton's "Painting," Prof. A. H. Keane's "New Guinea," and A. Clark's "Oxford." Under "Parliament" is a list of constituencies showing the number of members sent to the House of Commons. As usual, woodcut illustrations abound, and the several States of the Union embraced in this part of the alphabet are mapped in color.

The twenty-seventh volume of the 'Dictionary of National Biography' (Macmillan) is occupied with another instalment of the mighty letter H, ending with Hovenden. The longest article (fifteen pages) is upon Hogarth, who, it should be remembered, was instrumental in securing copyright for artistic designs, and who made interesting experiments with wood as a cheaper mode of engraving, but without success, as regards cost. The two plates actually executed "show that Hogarth's bold drawing upon the block, even in its rough knife-cut facsimile, has a vigor which is wanting in the copper." Hobbes is treated of in eight pages by Leslie Stephen, who styles him "a product of the great intellectual movement distinguished by' Bacon, Galileo, Kepler, Harvey, and Descartes, and says he "produced a fermentation in English thought not surpassed until the advent of Darwin." The carrier, Thomas Hobson, whose "choice" of the next horse in turn in his stall for his customers gave rise to the proverb, is shown to have been a considerable person and to have been a lasting benefactor to Cambridge. Hobart Pasha, who, from being blockade-runner during our civil war, became the Sultan's naval adviser, began as a gunner's mate in suppressing the slave trade on the South American coast. The strange career of the medium Home is related with all possible credit, and is said to offer a "curious and as yet unsolved problem."

Mr. Giles B. Stebbins's 'Upward Steps of Seventy Years: Autobiographic, Biographic, Historic' (New York: U. S. Book Co.) is valuable as the work of a man of the forties for whom the forties are not yet ended. He still feels in himself all the reformatory impulses of that fermenting period, and a large portion of his narrative consists of very accurate portraits of the men and women with whom he coöperated and whom he met more or less familiarly, especially as a lecturer in the anti-slavery cause. Noticeable is his account of the Northampton Community and some of its leading figures. The latter part of the volume is given up to personal spiritualistic experiences, running through the whole gamut of "manifestations," from the puerile to the permanently mysterious. Mr. Stebbins has a firm belief in "that bourne from whence travellers sometimes return," as he puts it. How a man of his kindly, humanitarian disposition could become the author of 'British Free Trade a Delusion' and the 'American Protectionist's Manual,' and hired editor, for the late E. B. Ward, of a protectionist paper in Washington, passes understanding as much as any of his mediumistic miracles. But he does not dilate excessively on this phase of his activity. He describes his intercourse with the late Henry C. Carey as admiringly as that with the free-trader Gerrit Smith at Peterboro. Mr. Stebbins was born in Springfield, Mass., about the year 1817. His parents attended the Unitarian Church, and he recalls George Bancroft "standing before the window in prayer-time, and catching flies on its panes in his total absence of mind." Among other philanthropists intimately portrayed by Mr. Stebbins are Oliver Smith of Northampton and his niece, Sophia, the founder of Smith College.

Mrs. Cynthia Morgan St. John's 'Wordsworth for the Young' (Boston: D. Lothrop Co.) is a book of selections which deserves respectful treatment for its aim. This aim is not an introduction to Wordsworth, nor an initiation in poetic taste, but an early subjection of the childish mind to "the calming and spiritualizing influence of the natural world." It is easy to see what order of pieces would be chosen for this purpose, and our main criticism is that the older children (in the three graded divisions) are least well provided for, and suffer most from the compiler's comparative indifference to poetic standards in making excerpts from the most unequal of poets. While judicious parents and teachers would skip much in their reading from these pages, Wordsworthian doggerel is, it must be conceded, of better worth than Mother Goose—to adopt Mrs. St. John's comparison more closely than she does. The illustrations are selected like the verse, and with considerable skill, considering the probable medley at command.

There can be nothing but praise for the purpose of two manuals that meet together on our table—'Elements of Civil Government,' by Alex. L. Peterman (American Book Co.), and 'The American Citizen,' by Charles F. Dole (Boston: D. C. Heath & Co.). Intended primarily for use in the public schools, they serve as one practical solution of the question of non-religious teaching of morals. Especially is this the case with Mr. Dole's book, which takes a wider range than the other. His sections entitled "Economic Duties" and "Social Duties" are particularly valuable, his sure and clear handling in the chapters on Property and Money being worthy of special commendation. Senator Peterman's book (he is a member of the Kentucky Senate) is more formal, and restricted to the subject of government pure and simple; it is based, he says, upon his experience as a teacher for many

years, and is certainly written with an eye to the technical requirements of the school-room. It is of the happiest omen that such books are now accessible to teachers.

We have on a former occasion praised the still recent work of M. É. Boutmy, Principal of the French School of Political Science, called 'Études de Droit Constitutionnel,' and we are now glad to announce an English translation under the title 'Studies in Constitutional Law: France, England, United States' (Macmillan). It is a translation from the second edition by E. M. Dicey, and is provided with an introduction by Prof. A. V. Dicey of Oxford, who confidently recommends it to the attention of students, and holds it to be a great recommendation that "the essay is written by a foreigner for foreigners." He has added a few notes, signed with his initials, some of them referring to Bryce's 'American Commonwealth.'

Mr. H. Morse Stephens's 'The Story of Portugal' (G. P. Putnam's Sons) can but add to the favorable impression of Mr. Stephens's powers made by his writings on the French Revolution. He disclaims, it is true, having made exhaustive researches for the present work, yet it is much to have thoroughly acquainted himself with the results of the modern historical school in Portugal, and by adopting these to have produced a manual far more trustworthy, at least as respects the early history, than anything heretofore published in English. The method followed is not so episodic as has been the case in some volumes of the "Story of the Nations" series; Mr. Stephens calls himself only a plodding annalist. Yet he observes the proportions and knows where to lay emphasis, and is thus far from giving simply a register of events. A good specimen of his self-sacrifice is where he passes so lightly over the period of French occupation, content to refer the reader to Napier's unrivalled narrative of the Napoleonic wars in the Peninsula. Altogether, the book deserves commendation, and will meet a "long-felt want" more truly than some of its predecessors in the series. We notice that the given name of Herculano, that Niebuhr among Portuguese historians, is spelled in three different ways.

The 'Cantigas' of Alfonso the Wise have lately been published by the Spanish Academy in two folio volumes. Heretofore these poems, written in Galician and of great value to the student of the literature of the Middle Ages, have been accessible only in scattered citations.

From Macmillan & Co. we have received 'The Apostolic Fathers,' a volume begun by the late Bishop Lightfoot, and now completed and edited by J. R. Harmer. In the case of each writing, the Greek text is preceded by a short introduction and followed by an English translation. The same house sends us a third and revised edition, two volumes in one, of Martineau's 'Types of Ethical Theory,' and a second edition of the first volume of Prof. Alfred Marshall's 'Principles of Economics.' The new edition of the 'Principles' differs from the first only in point of detail and in arrangement. The changes are not without importance, but are too numerous to allow us to do more than refer to them.

Dr. Seward Webb has printed an account of a journey to California and Alaska, returning via the Canadian Pacific. An *édition de luxe*, with etchings, is destined for his friends, while a popular edition, with numerous "process" illustrations, has been issued by the Putnams. It does not appear to rise above a chronicle of ordinary experiences on a special train over the usual routes of tourists.

J. B. Bailey writes to the *Academy* that a copy of Marat's 'Essay on Gleets' has at last been found and, together with his later medical tract published in London, is soon to be reprinted. The same journal announces that the Chaucer Concordance is getting within sight of publication; work upon it was resumed in 1888, and now Dr. Ewald Flügel of Leipzig undertakes to edit the mass of material.

A new milestone marks the rapid advance of "university extension" in this country, namely, the establishment of a monthly organ of the American Society. Judging by the first number, that for July, *University Extension* is to have a purely missionary tone, though that is inevitable in the beginning of such an enterprise, and may later on give place to something broader.

The Cleveland College for Women, in a recent report, shows a total enrolment of 132 students for the three years of its existence. A permanent site has been secured, and Clark Hall and Mather Cottage will be at once erected. The gifts of Mrs. Jas. F. Clark and Mrs. Samuel Mather not only cover this expense, but also aggregate $100,000 as the nucleus of an endowment fund. What is noteworthy about this institution is, that it appears to be symptomatic of a reaction against the coeducational practice of the West. It competes, one may say, not only with the neighboring Oberlin, but with the University of Michigan and with Cornell University.

Prof. W. W. Goodwin's masterly Phi Beta Kappa address on "The Present and Future of Harvard College" has been printed in a neat form by Ginn & Co., Boston. Every one who heard it should be glad to read it, and we especially commend it both to those who still have lingering doubts about the elective system, and to the candid friends of the three-years' course, with whom, we are free to say, we are in sympathy, while holding our judgment in suspense.

The full-length portrait of Phillips Brooks in his library is the chief attraction of *Sun and Shade* for August (New York: Photo-Gravure Co.).

A geological excursion on a large scale is planned for the wind-up of the International Geological Congress which meets in Washington, August 26 to September 2. The design is mainly to give European geologists an opportunity to examine personally the most important geological phenomena of the United States. Leaving Washington on Sept. 3, a train of completely equipped Pullman cars will start on a journey of more than 6,000 miles, in the course of which the Appalachian range will be crossed, the glacial phenomena observed in northern Minnesota, and the Yellowstone Park, and the Rocky Mountains in Montana and Colorado successively visited, the expedition ending in New York, Sept. 26. Those desiring to take part in it should write as early as possible to S. F. Emmons, Secretary, Washington. Two hundred and sixty-five dollars will cover all the necessary expenses of the trip.

—Part VI. of the English Philological Society's Dictionary, running from *Clo-* to *Consigner*, may now be expected in the course of a few days. It embraces 5,215 Main Words, 708 Special Combinations calling for separate explanation, and 985 Subordinate Words and Forms; the total amounting to 6,908. In Part VII. we are to have the rest of C, with the first portion of D. The importance of words in C is patent from the fact that, as Dr. Murray observes, this letter is one of three which, taken together, begin nearly a third of all English vocables. As showing the extensive scale of the Dictionary, it may be mentioned that no fewer than twenty three columns of it are devoted to the verb *Come;* no other word having yet demanded so large a space for treatment. The preparation of a Supplement to the Dictionary, which cannot fail to be instructive, is now announced in these words:

"In no earlier part of the Vocabulary have the ordinary Dictionaries been found so deficient, or so affected with error; the great number of bogus words, originating in mistakes of many kinds and of many authors, from the early days of English lexicography downward, which have been uncritically copied by one compiler after another, until, in the most recent compilation, they form a portentous number, has decided us to prepare a *List of Spurious Words* found in the Dictionaries, to be given at the end of the work, to which list such *verba nihili* are relegated from the text."

The beginning of Vol. III. of the same Dictionary, which has just left the press, has for its editor a very accomplished scholar, Mr. Henry Bradley, President of the Philological Society. The First Part of this volume, containing 344 pages, extends from *E* to *Every*. It deals with 6,842 Main Words, 1,565 Subordinate Words, and 786 Special Combinations explained under the Main Words, constituting a total of 9,193. One noteworthy feature of these words, we are told, is the extremely small proportion of them found to be natively English; while another is the unusual abundance, among them, of technicalities called into existence by the development of science in recent years. We can here only add, that, the more searching the scrutiny of the manner in which Mr. Bradley has discharged his editorial functions, the more convincingly, we apprehend, it will appear that Dr. Murray is most fortunate in having him as a coadjutor. It is a very considerable stride that has lately been taken by their herculean undertaking.

—We have received from B. Westermann & Co. the concluding parts of the first annual volume in extension of the fourth edition of 'Meyers Konversations-Lexikon.' The most cursory examination discovers the great value and convenience of this review of the year 1890. In the first place, we have an article on each of the leading Powers, narrating its history for the twelvemonth, with a summary of its literary productions. In the case of the United States, the population census of 1890 is recorded, and a separate article of four pages is devoted to the McKinley Bill and its effect on Europe, and another to North American Literature 1885–1890, by Karl Knortz. Then, still observing the general headings, we have the several congresses of the year, scientific and other; the art exhibitions of Germany; geographical discovery and bibliography; historical literature, 1888–1890, pedagogic, 1880–1890, and theological; recent historical works evoked by the great wars since Sadowa; works illustrating the history of civilization, etc. The problem of reform of the high schools, in which the Emperor has interested himself with the oppressive officiousness of a saviour of society; the new industrial courts for the settlement of disputes between laborer and capitalist; taxation, another German concern; German trade, the German climate, are further topics fully treated. The movement of prices 1870–90 furnishes a notable article, and of interest is the description of prehistoric and mediæval trade-routes in Germany. The ever-present anticipation of war is ministered to by articles on the military employment of carrier-pigeons and the use of bicycles in the army, and by a map of the fortified frontiers of Germany touching France and Russia. Electricity obtains a large space, and there is a table under Telephone which shows that Sweden is third of

the European countries in its use of this mode of communication, following Great Britain and Germany. The grippe is discussed by itself; there are tables and maps showing the spread of diseases, and tinted maps of France, Germany, and Italy to exhibit relative local criminality (or frequency of arrests). A curious list indicates by title or artist the most remarkable paintings since Cimabue. Characteristic are entries of great personages, like Machiavelli and Napoleon, in order to refer the reader to the latest works concerning them, and this is done in the case of Mr. Adams's 'Life of R. H. Dana.' So Lecky's name is introduced to note the conclusion of his 'History of England.' A great many American biographies are newly inserted, from Buffalo Bill to Bellamy, T. B. Reed, Sitting Bull, J. Keppler, Thomas Evans, D. G. Brinton, W. T. Harris, George Kennan, etc. The classified table of contents reveals the names of some of the contributors to this scrupulously edited and printed volume; and the necrology is brought down to May, 1891. Altogether, this annual will take a high rank in its class.

—Mr. W. H. Venable brings together an interesting collection of historical and biographical sketches in his 'Beginnings of Literary Culture in the Ohio Valley' (Cincinnati: Robert Clarke & Co.). After an introductory chapter on some Early Travellers and Annalists, he gives us, successively, chapters on the Pioneer Press, Early Periodical Literature, Libraries, and Backwoods Colleges, and then goes on with accounts of pulpit and political orators, poets, and story-writers, winding up with eight biographical portraitures, the best known of the subjects being George D. Prentice and Alice Cary. The settlement of the Ohio Valley was effected at a time when cohesion seemed to be going utterly out of almost all forms of social organization, and the chaos resulting from the extreme individualism of the period is well indicated in Mr. Venable's pages. New sects sprang up like mushrooms, and the range was from Unitarianism down to the followers of Dilks, "the Leatherwood God, who, in 1828, inaugurated his system by a loud snort and the cry of the single word, 'Salvation.'" The ferment of ideas was revealed in the starting of endless sectarian schools, and also, perhaps even more notably, in the foundation of literary and philosophical periodicals. Mr. Venable gives a list of ninety-six of these, established between 1803 and 1860, with the warning that it is but "partial." They were nearly all ephemeral, naturally, but have their significance, and can show tangible results in having helped to train the pens of Harriet Beecher Stowe, James Freeman Clarke, W. D. Howells, M. D. Conway, and others. The book has much that is desultory and trivial, but withal yields the flavor which a studious and discreet attempt to preserve local traditions must always possess.

—The Superintendent of the United States Coast and Geodetic Survey publishes in Bulletin No. 23 the secular variation and annual change of the magnetic force at stations occupied by the U. S. Eclipse Expedition to West Africa, 1889–'90, in charge of Prof. David P. Todd. Eight of these were island stations in the North and South Atlantic—Fayal, San Vicente, two at St. Helena, two at Ascension Island, Barbados, and Bermuda. Six stations are on the African coast—Sierra Leone, Elmina (Gold Coast), St. Paul de Loanda, Cabiri (Angola interior), and two at Cape Town. The observer was Mr. E. D. Preston, and his work is made directly available for the use of the navigator and others, by the comparison and discussion of it in connection with the accumulated mass of older observations. Isomagnetic curves of a recent epoch are thus constructed, and much light is thrown on the character and extent of the changes which terrestrial magnetism is undergoing at present over a very wide geographic area. If we compare the mathematical expressions for the secular variation in declination at these stations of the Expedition with those situate on our Atlantic coast, the greatly enlarged secular motion, both in range and in period, becomes at once conspicuous. The average range for our coast stations is about twice 3°, whereas for the Atlantic islands generally, Rio de Janeiro, and Cape Town, it is twice 13°.5, or four and a half times as great. The period of a complete angular swing for the Atlantic coast stations is 267 years; whereas for the islands of the Atlantic, and coast stations in South America and West Africa, it is just double the length, or 534 years. This very significant change of character, as depending upon geographic position, is, like the entire phenomena of the secular motion, difficult of explanation; possibly there are interference phenomena due to more than a single cause. At Barbados, the Cape Verdes, Ascension, Saint Helena, and Cape Town there has been a systematic decrease, between the latest dates, both in the horizontal component and in the total magnetic force.

TAINE'S MODERN FRANCE.

Le Régime Moderne. Tome I. [Les Origines de la France Contemporaine.] Par H. Taine, de l'Académie Francaise. Paris. 1891.

The Modern Régime. By H. A. Taine. Translated by John Durand. Vol. I. Henry Holt & Co.

TAINE'S last volume contains, as does everything he has written, much interesting and important matter. His brilliant sketch of Napoleon's character might have been expected to interest Englishmen. His elaborate criticism and attack on the French administrative system is full of novelty for any one who is not a Frenchman. But, for all this, his 'Régime Moderne' has, in England at least, fallen flat. It has not aroused as much attention as either his 'Ancien Régime' or his 'Jacobin Conquest.' The reason for this, though not obvious, may be discovered by the use of a little thought. The 'Régime Moderne' displays the weak sides of Taine's genius. In his former volumes these defects were masked by the inherent interest of the facts which he laid before his readers. In his last volume the faults of our author are patent. He is too considerable a writer to need flattery. His sterling merits will always be recognized by intelligent readers; and now that a good opportunity for fair criticism has arisen, it is worth while to examine with some care the limits or deficiencies of an eminent man of letters.

Taine is great as a collector of facts, but he is neither an historian of the first class nor an original or profound thinker. That he cannot rank high as an historian appears from an examination either of his whole five volumes or of his chapter on Napoleon. He lacks that primary characteristic of a great historian, the capacity for looking at his subject as a whole. From Taine's pages you may learn an infinity of details about the old noblesse, about the Girondists, about the Jacobins, about French Constitution-makers, and the like. But no study, however careful, will enable a student to collect from Taine a picture of the *ancien régime*, a history of the Girondists or of the Jacobins, a view of the progressive growth (or, if you prefer, of the systematic misgrowth) of French constitutionalism. It would in many respects be very unfair to the writer of 'Les Origines de la France Contemporaine' if we placed him merely on a level with Duvergier de Hauranne, whose 'Gouvernement Parlementaire en France' may be described as the Whig view of French parliamentary government. But Duvergier de Hauranne does give his readers a real insight into the ideas which determined the course in France of the battle, hardly yet ended, for the establishment of parliamentary government. Taine does nothing of the kind. He tells us of the evils of the *ancien régime*, and impresses upon us the weakness of the Girondists; he makes us recognize the tyranny, the savagery, and the incapacity of the Jacobins who ruled France both before and (what Englishmen forget) after the fall of Robespierre. But he explains nothing, because he looks at nothing as a whole. Events at Paris are, throughout the Revolution, governed by events on or outside the frontier of France. Suspicions — as we now know, justifiable suspicions — of the treachery of the court weakened the hands of all men who wished to rally round the throne and resist the brutality of the Revolution. But Taine's criticism omits all notice of foreign affairs, and passes over or ignores the impossibility felt by every man, whatever his politics, of trusting the Bourbons. Even his account of the Reign of Terror, full as it is of impressiveness and instruction, is entirely deficient in unity. Two examples of this may suffice. A careful examination of Taine's pages has not enabled us to discover anything like a general estimate of the numbers of the victims who, in his opinion, perished on the scaffold or by lawless violence. They might, as far as his statements go, be numbered by thousands or by tens of thousands. He utterly omits, again, to state, what we believe is pretty well ascertained, that the towns or districts where executions took place were few. A student of Taine might well suppose that the horrors which disgraced Paris, Nantes, Bordeaux, or Lyons were repeated in every part of the country.

Let us turn from Taine's way of looking at French revolutionary history to his picture of Napoleon. On no part of his work has our author, we may be sure, bestowed more pains than on the chapter devoted to Bonaparte. He has brought to bear upon it all his skill as an historical portrait-painter, all his infinite laboriousness in the collection of characteristic details; but he repeats, in his attempt to analyze or describe character, exactly the faults which are fatal to his description either of eras or of institutions. Taine tells us an infinity of anecdotes about Napoleon. He insists, and no doubt with truth, on the importance of Bonaparte's Corsican descent. He shows the hero to us as a sort of Corsican savage, who had inherited from his Italian ancestors all the policy or cunning, the boldness or the recklessness, of an Italian of the Renaissance. But even the generalization that Napoleon was in fact a great *condottiere*, the survivor of an earlier age—which, we confess, is a rhetorical idea that does not seem to lead one very far in the search after truth—is concealed, and, so to speak, overpowered, by the crowd of anecdotes with which Taine crams his pages. We learn a great number of facts about Bonaparte's indifference or insensibility to political, or indeed to any kind of

morality; we are shown his marvellous power of taming ruffians such as Augereau or Vandamme; we are told about his impatience, his breaking of furniture when in a passion, the blows he gives his valets, or the kick in the stomach with which, on one occasion at least, he silenced the opposition of a colleague. We learn a great deal about the condition of his body, and a great deal also about the powers of his intellect, about his passion for details and his hatred of abstractions, the coolness of his understanding overbalanced (as Taine considers) by the excess of his imagination. All these and a hundred other things about Napoleon (such, for example, as the irregularity and the vigor of his literary style, the rapidity of his dictation, and the illegibility of his handwriting) are to be learned from Taine's pages. But do we gain any picture of the man, any real idea or explanation of Napoleon's genius?

The question can be answered only with the most emphatic negative. Taine can pile together details out of which some one may in the future construct a whole; but he can no more draw a portrait or analyze a character than he can paint a state of society or trace the evolution either of institutions or of ideas. His passion for detail prevents him from affording real information with regard to large questions even when the inquiries are of a kind which might be answered by research. The Code Napoléon, for instance, must, like every other great work, have a history. How far is it really the creation of the man whose name it bears? No one but a child supposes that the Code was written by Napoleon; but it is a fair, and in estimating his character a most important, inquiry, What was the part which he bore in the conception or the execution of the work which will insure his name a life as long as that of French law, and very possibly far longer? On this point Taine tells us next to nothing. We would gladly have spared anecdotes illustrative of Bonaparte's insolence or passion if their sacrifice had made room for a history of the Code.

Taine is not an original or a profound thinker. As long as he dealt with the *ancien régime* he followed the guidance of an original and subtle teacher. All that is speculative in Taine's pages on that subject is, whether consciously or not, drawn from Tocqueville. No doubt Taine's information is far wider and better than that possessed by his predecessor. Tocqueville died while his work was incomplete, and the last thirty years have opened mines of information about Revolutionary history and the condition of sentiment at the outbreak of the Revolution which were not open to Tocqueville, and have been worked with most creditable diligence and energy by Taine. But we find it impossible to perceive that, in the way of thought, the disciple has ever got a step beyond his master. In one respect at least Tocqueville saw a good deal more deeply into the truth of things than Taine. Tocqueville perceived that, as a matter of fact, the *ancien régime* was detested by all who came under it, and therefore inferred that it was detestable. Taine, with Tocqueville's writings before his eyes, and with hundreds of additional facts confirmatory of Tocqueville's conclusions, never grasps the meaning of the facts which he records. His view of things is detached, wavering, and incoherent. His 'Ancien Régime' shows us a society falling to pieces from inherent faults; his 'France Moderne' implies, though it does not distinctly state, that modern French institutions have suffered irreparably by not being built on the foundations of the *ancien régime*.

Let us take two points as tests—they are simple and obvious ones—of Taine's capacity as a thinker. The first is the relation of Napoleon to the institutions of modern France. Napoleon, argues Taine, is the architect of France as it now exists; if we want to understand the work, we must examine the character of the workman. This is the plea under cover of which he introduces into his work an immense lot of more or less interesting anecdote or gossip about Napoleon. No plea was ever more specious or more unsound. It is only in a very modified sense true that any man, however powerful, can be called the architect of a country's institutions. Modern France, with all its apparent unlikeness to the *ancien régime*, is, in many points, the development of the social condition which preceded the Revolution. On this matter Tocqueville is a surer guide than Taine, and French public law betrays, even to a very superficial student, the influence of ideas at least as old as Louis XIV., and probably much older. But grant, for the sake of argument, that French society is a fabric built up by Napoleon. To know the genius of the architect is no doubt in this case of importance. Still, it is only with his views as a builder that we are concerned. We are not concerned with the pettinesses or irregularities of his private life. Napoleon's work is partially explained by his ideas of government; it receives no explanation at all from stories of Napoleon breaking chairs when he was angry, or of his suddenly interrupting a dinner to indulge in other pleasures than those of the table. Let us accept Taine's analogy: a student of St. Paul's may gain something from knowing the architectural theories of Wren, but an intelligent student of architecture would never care to know whether Wren habitually went to bed drunk or sober.

Our second point is the cut-and-dried theory which Taine applies as a criterion for testing the merits and demerits of the *régime moderne*. He takes a theory of ultra-individualism as if it were an established political axiom: he refers to Macaulay's essay, Gladstone on Church and State, and to Spencer's 'Man versus the State,' as works containing doctrine which is beyond question. Now, against Macaulay's brilliant essay as an incisive criticism on an unsound theory we have not a word to utter; but it were simply ridiculous to suppose either that Macaulay meant it as a complete statement of the relation between the individual and the State, or that it can be treated as anything like a complete solution of a question the answer to which is filled both with speculative and with practical difficulties. We are quite aware that Mr. Herbert Spencer has disciples who believe that their teacher has solved problems which have perplexed philosophers and statesmen. All that need here be said is, that the validity of Mr. Spencer's theories is a matter, to say the very least, open to discussion. It is difficult to believe that any thinker, not the sworn adherent of a school—which we find it difficult to believe is Taine's position—can seriously believe that the institutions of France can be fairly tested by their consonance with or dissonance from Spencerian theories, or that dicta as to the relation between the State and individuals can in any case go very far in helping us towards an answer to the most difficult of inquiries, namely, how much France has gained or lost by the change from the *ancien régime* to the modern condition of society.

Our critique of Taine will seem to many of our readers unjust. We admit that it is one-sided, for the object of this article is not to weigh M. Taine's merits as a collector of facts—which are very great—against his defects as an historian and a thinker, which, to our mind, are not inconsiderable, and then on a fair balance strike an estimate of his genius; but to point out what are the limits of his powers. Such an attempt must of necessity seem unfair because it is, as we have admitted, of necessity one-sided. In articles on the earlier parts of Taine's great work we have, we think, dealt fairly with its merits. His last volume is not his best; as he approaches present times the difficulty of his work increases. Of this he is well aware. "L'entreprise est hasardeuse, plus malaisée que les deux précédentes." These are his own words; none could more happily express the great, we had almost said insuperable, difficulty of his position. Whether in any case the idea of writing an historical criticism which was neither a complete history nor a complete critique of the development of France since the Revolution was a happy one, is open to doubt. That the perfectly satisfactory performance of the task Taine has undertaken requires on the part of the man who is to achieve it the highest qualities both of an historian and of a philosopher, is certain. That Taine has sometimes not risen intellectually to the height of the enterprise he has undertaken affords ground for criticism, but hardly for censure. His last volume, whatever its defects, abounds in interesting information. All that the severest critic can say is, that the industrious collection of interesting facts does not of itself suffice either for the creation of historical portraits or for the development of the philosophy of history.

MORE NOVELS.

The Beverleys. By Mary Abbott. Chicago: A. C. McClurg & Co.

Boris Lensky. From the German of Ossip Schubin. Translated by Elise L. Lathrop. New York: Worthington Co.

Flute and Violin, and Other Kentucky Tales. By James Lane Allen. Harper & Bros.

Sidney. By Margaret Deland. Boston: Houghton, Mifflin & Co.

Stories Told at Twilight. By Louise Chandler Moulton. Boston: Roberts Bros.

Brampton Sketches. By Mary B. Claflin. New York: T. Y. Crowell & Co.

A Book o' Nine Tales. By Arlo Bates. Roberts Brothers.

Balaam and His Master, and Other Sketches and Stories. By Joel Chandler Harris. Houghton, Mifflin & Co.

Against Heavy Odds. By Hjalmar Hjorth Boyesen. Charles Scribner's Sons.

To have read 'Alexia' is to feel a kindly predisposition towards the successor of that charming little book. 'The Beverleys' has followed it, and it is perhaps unreasonable to be disappointed at missing in a novel the wild-rose perfume of the story. It is a novel clever in form and style, and in its portraits from Calcutta society. The moods and fascinations of the wild Irish girl and the labyrinths of her naughty heart are prettily described; there are pungent observations on men, women, and manners a plenty what more would one have? What, indeed, unless something more of coherence in the plan; something less of disagreeable than one finds in a father's playing rival to his son, to the point of intercepting his letters; something less of shiftiness in the point of attack

upon the reader's interest, and—since one always wishes to approve of the Queen of Hearts—a little less inducement, here and there, to side with her detractors.

'Boris Lensky' is the story of a Russian violinist whose art and person were so steeped in *diablerie* that his pathway was strewn with the wrecks of his lady victims. One of them his son would later have liked to marry, but she never succeeds in loving a second time, so that the son is reduced to loving her "undesiringly, as one does a saint or the dead." The daughter of the violin-player has a yet sadder fate in being betrayed by an Austrian Count. The one who could not love both father and son induces the Count to marry the young girl he has wronged, and every one appears quite satisfied—even the father, who, having fallen into deep musical degeneration, appears before the public in a swan-like burst of more than his original power, and dies. If the story was intended to be a musical story, more music would have been in order; if a German 'Anna Karénina,' more power was needed throughout. There is, indeed, a certain force in the story of the young girl who slips through paths of simple unconventionality down to her doom, and, as well, in those pages where she plans her own death. The rest is an attempt at strength, not strong, and one asks why all this mud for nothing? The book is very poorly translated, and the illustrations are both weak in themselves and utterly out of place in a society novel of the calibre of this one.

It is with something akin to a sigh, nowadays, that one opens a new volume of tales of any section of our country, feeling that every State has bubbled with historians, and that every hue of "local color" has been offered us to admire, till the senses are weary. But Mr. James Lane Allen's book of Kentucky stories shows that any such jaded criticism is all wrong; that there was an imaginative height and a poetic depth to be touched which no previous hand had reached in this class of historic fiction, and which, indeed, puts these stories beyond the limits of local literature—as far as 'Zenobia' is beyond being a mere chronicle of Brook Farm. To read them, particularly the one called "Posthumous Fame," is to think of Hawthorne, and to recognize a poet spirit in this writer, whose occasional flights into the tropics of language do not prevent his being a rare teller of rare stories.

It seems to be Mrs. Deland's literary mission to create a highly unusual religious puzzle, and worry a way through it with a cleverness in pen-work and a fineness of observation that might better be put to better use. Mortimer Lee's conviction that because death is, marriage should not be, occasions his daughter Sidney a great deal of sorrow, and himself still more when she elects to marry at all hazards. It is quite impossible to infuse any great amount of reality into this moral tangle, and consequently the solution has little effect upon the sympathies. It may therefore be called an unsuccessful novel, so far as the main issue is concerned, albeit, as in 'John Ward,' there is some able side-work furnished.

We have not discovered any particular harm in Mrs. Moulton's stories for girls, except that it seems hardly worth while to advise them to nurse scarlet-fever and typhoid cases among their friends on the chance of working faith cures. We might, further, perhaps complain of a sense of monotony in the repeated appearance of the rich young girl who makes friends with the poor young girl in the opposite window, and who gives her first flowers, then drawing lessons. This young person is saved from being too angelic by touches like this: "Her hair . . . was like a halo about her forehead—a fine, fluffy, radiant halo, which meant hairpins over night, to be sure, but was none the less beautiful." This note of the human hairpin is exquisitely real, and should make fully half the world kin. The stories in other respects recall yet another line of Shakspere: "Oh! so soft, oh! so sweet!" are they.

'Brampton Sketches' tell of New England life in a village of the interior, eighty years ago, which has, as their author claims, a flavor quite distinct from the coast life of the same period. The concerns are more of indoors and of the intimately domestic—not of women who sadly await their fishermen from the hungry sea, but of men who meekly stand from under when their wives are making "sass." Gossip is lighter, views of life less sombre, pleasures more frequent, the horizon gayer, but more narrow. Readers of 'Agnes Surriage' will be interested in this closer view of the village where the fair Agnes was enthroned by her baronet, and in the gentle drolleries of the villagers, of the minister in particular. The art is photography, pure and simple, but the modest preface has already disclaimed any higher flight, and all that it promises is tastefully fulfilled.

Mr. Bates's little volume of stories ranges for subjects from hypnotism to the most beruffled young girls of the period. On the whole, we think his deepest ventures are his best, and that his psychic-research stories are more cleverly done than his society pictures. A delicate brightness marks them all, a refined inventiveness, and an expert style. We venture meekly to suggest that a proof-reader who should not permit a ride in New York in a "Fifth Avenue car on the elevated road," would contribute to the local color.

Mr. Harris's negroes are next in vitality to Nature's, and it is only with hers that it could occur to the critic to compare his. The dialect brings the very break of their voices to the reader's ear, and no one else has put such a detaining finger on their phrases. The present stories are mainly of war and reconstruction times, and, whether of blacks or whites, are penetrated with the spirit of those terrible days as few Southern stories are, the more because of the humor that plays around the horrors like a child among graves.

In 'Against Heavy Odds' Prof. Boyesen has made a felicitous return to Norse shores, and given an entertaining boy's story of a remarkable invention in harpoon-guns by which his youthful hero reconstructs whale-fishing and redeems his town, yes, even his country. That it reads something like a fairy story of the machine-shop, and that young Ingomar figures both as a Siegfried to whom Nature yields her secrets, and as a Conqueror before whom baronets and mobs alike bow down, may affect the probability of the story, but, for boy readers certainly, not its interest.

Early Days Recalled. By Janet Ross. London: Chapman & Hall. 1891.

THIS is an agreeable light volume of reminiscences, which, without adding much to the anecdotes of either literature or society, succeeds in giving the pleasantest impression of the social life of a distinguished group, and some aspects of private character in individuals which one is glad to get even a glimpse of. The author is the daughter of Sir Alexander and Lady Duff Gordon, and on her mother's side the grandchild of Mr. John Austin and his remarkable wife, Mrs. Austin, the friend of Carlyle and many other celebrated men. In her parents' town house and in their suburban place, nicknamed "The Gordon Arms," the child saw much of the best society, and was herself enough of a favorite to have many pretty things to tell of the attentions of great men to her small self. Her opportunities may be judged by a list of the guests whom she herself invited as her friends to one of her birthday parties—certainly, as she says, a remarkable company to gather at a child's summons; for in it were numbered Mrs. Norton, Lord Lansdowne, Tom Taylor, C. J. Bayley, Richard Doyle, and Thackeray. On this occasion Thackeray brought her an oyster for a present, and told her it was like cabinet pudding. She was bright enough to turn the tables by liking it and asking for more. He was a friend of the house, as was Dickens also, and often came in to dinner, sending a warning in verse. To this habit we owe the lines—"A nice leg of mutton, my Lucie"—"Lucie" being the name by which Lady Duff Gordon was called by her intimates. Carlyle was also a visitor, the only one whom the child cordially disliked. One day, when her mother was talking of German literature and overbore Carlyle with her animation, he lost his temper and burst out, "You're just a windbag, Lucie, you're just a windbag," on which the child, who had been listening with all her ears and was shocked by what she thought rudeness, interrupted the two, saying, "My papa always says men should be civil to women." Of course she was scolded for her pertness, but Carlyle only said goodhumoredly, "That child of yours has an eye for an inference, Lucie."

She was very fond of going with her father and mother to Rogers's Sunday morning breakfasts. He liked to have her brought in at dessert, and called her his "baby-love," and he kept a bunch of grapes for her, which she ate seated on a chair and two sofa cushions by his side. The highest praise she could think of for a grand Twelfth-Night party at Lionel de Rothschild's was, "It is *almost* as nice as Mr. Rogers's breakfasts." One day he puzzled her by saying, "Prose you will certainly write well—it's in your blood." Another time, seeing her stare into vacancy, he patted her on the head and asked what she was thinking about. "'Which is the most beautiful, mamma or Aunt Carry?' I answered. 'Ah, baby-love, that would puzzle older heads than yours,' said he, chuckling." (Mrs. Norton was "Aunt Carry.") She compliments Macaulay on his kindness to children. When she learned he was in the house, she would go and climb on his knee and say, "Now talk!" But these anecdotes, simple as they are and pleasant to linger over, are far from illustrating the whole little volume.

Of the more important characters of the time who come in for mention, and always in a most familiar and natural way, the most notable are Kinglake and Layard, John and Charles Austin, Barthélemy St. Hilaire, Guizot, Cousin, De Lesseps, Sir George C. Lewis, Eliot Warburton, Sir Francis B. Head, Lord Clanricarde, Lord Lansdowne, and some of the French royal family. The reminiscence of most of these is very slight, but it is put in the way of conversation, and entertains the reader more than memoirs of a perhaps more valuable sort. The passages about Kinglake and Layard are especially pleasing. The latter first appears on the scene with Lord Somers, who calls up to the young lady sitting in the bough of a mulberry tree on the lawn: "Come down, Janet, directly; here is the man who dug up those big beasts you saw in the

museum, and his name is Mr. Bull." Layard consequently signs his letters with this nickname, by which he was for many years called by his young and old friends. There is a good story of Lady Duff Gordon's seeing Kinglake come into the back drawing-room as she and her daughter were playing with a pet mouse; she was sure she saw him, spoke, and had the room searched, but he was, in fact, off on his travels. The hour and minute were written down, but Kinglake had no adventure to tell of it when he came back. "'Ah, Eothen,' we often said, 'you spoiled such a good ghost story by coming back with your full complement of arms and legs.'"

An anecdote of Mr. Nassau Senior will serve as an example of the conversational tone of these reminiscences, and of the sort of thing to be found in them, like plums. Mr. Senior was very indifferent to music, and once at Bowood "Tommy Moore" was induced to sing to a large party. "All prepared to listen to the charming performance save Mr. Senior, who went and sat down at a small table, and began to write with a quill pen on Lord Lansdowne's very ribbed paper. He was compiling an article on statistics, or something of that sort. Moore began, but his singing was rendered impossible by the persistent scratch, scratch, and he looked round to see who caused the odious noise. Mr. Senior raised his head and said innocently: 'Oh, you don't disturb me, I assure you; pray go on—I rather like it'—which caused an outburst of laughter absolutely puzzling to the unconscious statistician." Apropos of this the author relates how Vivier's "inimitable performances" came to an end in London because at the first one Lord Houghton blew his nose—"a war-trumpet, as friends will remember." Vivier threw up all his engagements at once. "'Ah,' he would say, 'les Anglais ont des nez terribles; celà vous fait l'effet du jugement dernier.'"

But we must bring our citations to an end; only it should be added that the author is a keen lover of horses and riding, and has a good deal to tell of her hunting and racing, and always writes of this topic with zest. She married and went to Egypt, and with recollections of her life there the volume comes to an end too soon. There is nothing very important in the story, but it is extremely entertaining to such as care for pleasant personal talk about very amiable and bright people, or merely the gossip of celebrated names. There is, too, a certain feminine charm in the easy-flowing style, a sense of womanly beauty and brilliancy throughout, which give a spirit to the whole.

The Flowers of Japan and the Art of Floral Arrangement. By Josiah Conder, F.R.I.B.A., Architect to the Imperial Japanese Government. With illustrations by Japanese artists. Yokohama: Kelly & Walsh; London: Sampson Low & Co. 4to. 1891.

FOR four hundred years Japan, foremost of nations in the development of the principles of courtesy and social formality, practised assiduously three arts which, with one exception in recent times, have not had their counterpart in the West. The art of tea-drinking (standing for the broader art of social intercourse), the art of gardening, and that of flower arrangement first received systematic development at the same epoch and in union with one another. As painting was in its origin mere decoration, so flower arrangement and gardening were regarded originally as worthy of special attention because of the part they played in embellishing and setting off the tea ceremony, which was to Japanese feudal society what the *levée* and the *salon* were to the France of the last two centuries. The tea ceremony has gradually come to be the accomplishment of a few antiquaries only; but the arrangement of flowers is an art which still preserves its vitality undiminished.

The reason is that it has its roots in the peculiar æsthetic qualities of the nation. It is a trite remark that Japanese pictorial art is essentially linear. The same quality finds a particularly suitable expression and a most congenial field in that grouping of flowers, branches, and leaves which concerns the characteristic art under notice. Its fundamental principles of contour, direction, and proportion receive merely a broader and freer exemplification in the kindred art of gardening. Mixed with the artistic aspect of these rules is the symbolism which insists on attributing a moral significance to certain elements and the various modes of disposing them. Half-way between these moral and artistic considerations stand others which require the ways of Nature to be studied and observed in all artificial treatment of natural objects. The symbolism we of the West may reject, but the canon which requires that Nature shall never be violated and shall, if possible, always be represented or called to mind, is a fundamental principle which will always make the art a living one. This and the general æsthetic principle of variety in unity, without symmetry, are the great gifts of Japan to us in this department, and it is now made possible for us to study the lesson to good purpose.

For Mr. Conder it is a chosen field. In 1886 the Asiatic Society of Japan printed his 'Art of Landscape Gardening in Japan,' and in 1889 his 'Theory of Japanese Flower Arrangements'; and the book now before us is but an adaptation of the latter essay to the needs of foreign readers. He has shown good judgment in the rearrangement of topics, and in eliminating and enlarging where it was necessary for readers not resident in Japan. The chief addition consists of a general preface on the flowers of Japan, the customs and anecdotes connected with them, and the famous places for viewing them. Fifty-four full-page plates and twenty-six smaller cuts make it as easy as anything short of ocular demonstration could do for the learner to acquire practical skill in the art.

As to the art itself, we wish that there were space enough to set forth the attractions which it ought to offer to lovers of beautiful homes. It ought to become not merely a fashionable fad, but a recognized factor in ordinary domestic adornment. It is perfectly adaptable to our own flowers and our own rooms, for the room plays no small part in the ensemble. Everything bearing on the general effect must be considered—direction and proportion, first of all, then season, color, vessel, position in the room, and many other subordinate matters. The wonderful variety of vases and wicker vessels described by Mr. Conder would alone make a notable addition to our domestic furniture and decoration; and there is little which could not be easily reproduced and adapted. The influence which would be exercised towards simplicity, directness, carefulness, love of small things, interest in the ordinary and unpretentious, and against profusion, extravagance, ambition to rival others, exaltation of the rare and unattainable, would be not the least benefit that might result. It is a pity that Mr. Conder could not have embodied in the same volume the essentials of his essay on Japanese gardening, for it is probable that they would have found a quicker acceptance and trial, and would appeal to us more effectively than the floral art. To see a Japanese garden is to love it. As a part of the home, it has a much closer relation to the householder than our type can possibly have. But until we learn as a people to make more of Nature and her ways, to delight, as the Japanese do, in moulding miniature gardens in earthen dishes, to buy inch-high trees for playthings, to spend our holidays only where the finest blossoms are to be found, to give up our sidewalks three times a month to flower markets, to front our homes upon quiet gardens instead of on noisy streets, and to care for form more and for color less—until we change our nature, can we expect to find real attraction in the arrangement of a few flowers or in the composition of a garden?

It remains to add that the volume before us is a generous folio, handsomely printed, and embellished with a large number of interesting illustrations in color prepared expressly by native artists. These include a number of interiors, and it is no mean praise of the work to say that it deserves a place (as being supplementary) beside Mr. Morse's 'Japanese Homes.'

Life and Works of Horace Mann. 5 vols. Boston: Lee & Shepard. 1891.

FROM the preface, which is bound up with vol. ii., we learn that this edition, in the main a reissue after many years, is "in response to a continuing demand for Mr. Mann's educational writings." In fact, apart from the Life by his widow, these volumes show only the educator in Horace Mann. Lectures and addresses, and the twelve annual school reports, with extracts from editorial articles in the *Common-School Journal*, are all devoted to a single theme. Historically, the compilation merits a place in the library of every institution of learning, and its present utility cannot be doubted in spite of Mr. Mann's prolixity and old-fashioned point of view. For example, his remarks on co-education in his inaugural address at Antioch College are full of sound sense. So, in his twelfth report as Secretary of the Massachusetts Board of Education, his argument against sectarian religious instruction in the schools is inexpugnable, though he held fast to the compulsory reading of the Bible in the schools, and seemed to pity the committeeman who assigned as a reason for excluding the Scriptures in his district the fact that "they are not calculated for a school-book: the style and phraseology are too difficult to be read." Of course, he had still less toleration for the committeeman who reported, as to the Testament, that "objections have been raised against it by some teachers, on account of many of the verses not ending with a full stop."

Mr. Mann's faith in the Bible was sufficiently robust to suit the most orthodox, and, coupled with his faith in phrenology (his present editor is George Combe Mann), it led him into some extraordinary trains of thought. In the address already cited, he held it "to be morally impossible for God to have created, in the beginning, such men and women as we find the human race, in their physical condition, now to be." He appealed to the records of the book of Genesis, "which contains the earliest annals of the human family." For the first 2369 years "not a single instance is recorded of a child born blind, or deaf, or dumb, or idiotic, or malformed in any way! . . . Not one man or woman died of disease. . . . No cholera infantum, scarlatina, measles,

smallpox—not even a toothache! So extraordinary a thing was it for a son to die before his father that an instance of it is deemed worthy of special notice."

In contending (Report for 1846) for State education, he offers a test of the validity of his reasoning which he thinks "defies denial or evasion," namely:

"We prohibit infanticide under penalty of death. We practise a refinement in this particular: the life of an infant is inviolable even before he is born. . . . But why preserve the natural life of a child, why preserve unborn embryos of life, if we do not intend to watch over and to protect them, and to expand their subsequent existence into usefulness and happiness? . . . We are brought, then, to this startling but inevitable alternative—the natural life of an infant should be extinguished as soon as it is born, or the means should be provided to save that life from being a curse to its possessor; and, therefore, every State is morally bound to enact a code of laws legalizing and enforcing infanticide, or a code of laws establishing free schools."

We commend this dilemma to our Socialist friends, that they may supply the second term to suit themselves.

These volumes suggest many reflections not intended to be aroused, and it would be easy to comment further upon them. We close with remarking that as far back as July, 1848, the Irish immigration had so affected the population of Boston that in the primary schools more than half the ten thousand children were of foreign parentage.

Principles of Political Economy. By Arthur Latham Perry, LL.D. Charles Scribner's Sons. 1891.

THIS is not, as might easily be supposed, a new edition of Prof. Perry's 'Political Economy'—of which, by the way, twenty-one editions have been published—but a newly constructed book. The author desired to leave behind him a manual which should contain a fuller exposition of the principles of the science, and less historical matter, while he sought to emphasize the application of these principles to some of the pernicious legislation from which we are now suffering and are likely to suffer. In substance, however, the books are similar, and we observe few references in the volume before us to recent contributions to the science; the names of Cairnes, Rogers, Sidgwick, and Marshall not being mentioned. In fact, most modern researches would be, in the author's opinion, irrelevant, owing to the restricted view which he takes of the science. While there is much to be said in favor of limiting the range of economic inquiries, as necessary to preserve their definiteness, it cannot be denied that a system which disposes of the theory of rent by insisting upon a particular definition of value, and which relegates the doctrine of Malthus to the domain of physiology, is too narrow to be altogether satisfactory.

At the same time it is quite possible to construct a political economy, as the author has done, which shall have a merit of its own in making prominent a few highly important truths. By confining attention to the matter of buying and selling as the proper subject of the science, it becomes easy to explode some common fallacies. Since two parties are necessary to an exchange, the principle of diversity of advantages is disclosed at once, and with it the whole theory of trade. Again, as it scarcely admits of denial that the motive in buying and selling is gain, the consequence is easily deduced that Government is not properly constituted for engaging in such transactions. As to the constitutional argument against protection, however, we fear that the last legal-tender decision has rendered it futile.

In spite of the title of the book, we apprehend that for most persons its chief interest will be in its practical applications. There is a profusion of anecdote and quotation, much of which is effective and most of which is entertaining. The historical element is still prominent, and current events are considered in their bearing upon the principles laid down. The style is animated and often colloquial, and it is impossible not to be struck with the vigor with which the author maintains his propositions. While most economists would differ radically with him on many points, it is quite probable that the general good sense of his conclusions will make his book useful to readers who are not prepared to undertake abstruse investigations, and in this way a large class of citizens will be put in possession of a great deal of information which they require for the proper discharge of their political duties. We could easily prolong our comments, but Prof. Perry's books are too well known to the public to require any extended notice from us.

A Student's History of England from the Earliest Times to 1885. By Samuel Rawson Gardiner. Vol. I., B. C. 55—A. D. 1509. Longmans, Green & Co. Pp. xxxii+378.

EVERY teacher of English history has reason to rejoice that the historian of the Stuart reigns has found time to write an extended general treatise for the use of schools. So long as text-books are a necessity, there is an obvious advantage in having the guidance of a master. Besides, for other reasons, we have really needed a book such as Prof. Gardiner has given us, one somewhat fuller in details and better provided with aids to study than is Green's 'Short History,' the only work which is at all likely to prove a serious rival. There are, however, no maps in the 'Student's History'; and it is to be regretted that the valuable reference-lists were not greatly extended. No opportunity should be lost to lead even the young student beyond the narrow horizon of the text into the greater world of the library. The genealogical tables are excellent. Particularly is this true of the twenty-one special tables, placed in their proper connections throughout the book, and carefully designed to aid the pupil where he most needs such assistance.

A unique feature consists of the very numerous illustrations. These have been prepared under the direction of Mr. St. John Hope, Secretary to the Society of Antiquaries, and they throw light on almost every phase of English life in all ages. Among others we find representations of domestic furniture, costume, armor, historic events, architecture, agricultural processes, and of various articles of manufacture, from the rude flint scraper of the river-drift to the ship of the fifteenth century. Never, perhaps, in such a treatise, has pictorial illustration been used with so good effect. The alert teacher will find here ample material for useful lessons by leading the pupil to draw the proper inferences and make the proper interpretations and comparisons.

The author writes for "such students as have already an elementary knowledge of the main facts of English history," and aims at meeting their needs by the use of plain language, and by the avoidance of multiplicity of details. In the accomplishment of this purpose he has been fairly successful, though we cannot give him unqualified praise. Any affectation of simplicity of diction, of childlike phrase, in a work of this grade is out of place. It leads to vague generalization. Educators are beginning to realize more and more that the young student of history requires much stronger meat than is usually set before him. His mind should be lifted up, his faculties put upon the strain, his aspirations aroused. Clearness of style and careful analysis are indeed essential; but to substitute general descriptions for exact terms, especially in the treatment of institutions, is to rob the subject of much of its scientific value. The remarkable success with which good teachers have been able to use Green's 'Short History,' even in the grammar school, is due largely to its dignified and suggestive style, constantly inviting and stimulating the best thought of both pupil and instructor. Prof. Gardiner's offence is not serious in this regard, and it is noticeable, perhaps, only in the opening chapters. Yet one cannot help regretting that he did not employ consistently the natural and fascinating manner which lends such a charm to his 'Thirty Years' War' and the 'Puritan Revolution.'

The present volume is divided into four parts: (1.) England before the Norman Conquest; (2.) The Norman and Angevin Kings; (3.) The Growth of the Parliamentary Constitution, 1199–1399; (4.) Lancaster, York, and Tudor, 1399–1509. The first division, consisting of six chapters, opens with an introductory account of ancient Britain. The characteristics of palæolithic, neolithic, and Celtic man are tersely described. The discussion of the English settlements, the strife of the early kingdoms, and the growth of the West Saxon and Danish monarchies, is clear and well arranged. Still this first part is, on the whole, the least successful division of the book. The treatment of institutions, in particular, lacks fulness and precision. Practically nothing of value is given as to the government of Roman provincial towns; and, considering the wealth of recent literature relating to the subject, the old English constitution receives scarcely the careful attention which it deserves. For example, some of the statements regarding the gesiths may prove misleading. It is not strictly accurate to say that the gesiths in their relation to the ceorls "were called eorls or men of noble descent"; or that the name gesiths "was abandoned for that of thegns, or servants, when they—as was soon the case—ceased to live with their chief and had houses and lands of their own, though they were still bound to military service." As a class, the gesiths—if they existed in England from the beginning—were not identical with the eorls. True, in many cases, it is natural to suppose that "they were probably all of them eorls." But nobility by service, as such, is opposed to nobility by blood. Theoretically, the *comitatus* of the chief, like the chief himself, was originally chosen solely on account of valor or military skill. Nor is it clear that the gesiths were superseded directly by the thegns. For a time, at least, as Konrad Maurer has shown, gesiths and thegns coexisted as distinct classes. Moreover, the name *thegn* does not mean "servant," as suggested, but "warrior."

The remaining three parts, constituting the body of the volume, are admirably well done. The political and institutional development is given due prominence. The style is compact, vigorous, and interesting. There is no lack of precision; and in the selection of the details the hand of a scholar thoroughly conversant with the sources and with the results of recent criticism is plainly revealed. It is a little surprising, however, to find the author seemingly

repeating the old error respecting the merchant gild. Speaking of the first borough charters, he declares that "in all these instances the governing body acknowledged by the charter was the merchant gild. It, to the exclusion of the townsmen who were not admitted to it, received authority to regulate trade to its own advantage, to choose officers, the principal officer being usually styled an alderman, with power to keep order and generally to provide for the well-being of the place." In practice, of course, the gild through its influence may usually have controlled the affairs of the borough. But, since the appearance in 1883 of Dr. Gross's 'Gilda Mercatoria,' recently expanded into his larger treatise, it may be regarded as definitively settled that the gild organization and the governing body of the town were in theory entirely distinct.

But whatever imperfections may be pointed out in Prof. Gardiner's book will not detract materially from its value. It is destined to take its place, we feel sure, as the leading text-book in general English history.

Taxidermy and Zoölogical Collecting: A Complete Handbook for the Amateur Taxidermist, Collector, Osteologist, Museum-builder, Sportsman, and Traveller. By William T. Hornaday. Charles Scribner's Sons. 1891. 8vo, pp. 362. Illustrated.

THE fact that Mr. Hornaday has retired may in part account for the readiness with which he gives out what by fellows of the craft are held as professional secrets. How such an enthusiast in the business could decide to retire is an unanswered question, unless, perhaps, it was a consequence of his exasperating experiences with rays and sharks, "the meanest of all subjects that vex the soul of the taxidermist." His book is a bulky, profusely illustrated volume, the contents of which, though in the main relating to results of his own labors or those of his comrades, give information on the majority of the topics by which it is demanded for either professionals or amateurs. The text is written in a lively style, and, aided by the numerous diagrams, conveys very clear ideas of the different devices and modes of procedure. A number of the cuts are drawn from single pieces or groups, of national renown, in the production of which the author has fully established his claim to rank as a master in his art.

The book is thoroughly modern; because of this, certain methods of manipulation, and receipts for special processes, as removal of stains, grease, etc., no longer appear as they did in older works. In regard to the collection and preparation of skins and skeletons, and in the instructions for mounting, the volume is most satisfactory. The section devoted to insects is admirable. Marine collectors will regret that several pages, with cuts of drags, tow nets, tangles, and grapples, were not added for their benefit. There is also reason to wish the proof-reader had been a little more wakeful.

BOOKS OF THE WEEK.

A Dead Man's Diary. New York: W. D. Rowland.
Buckbee, Sarah E. A Primary Word Book. Boston: D. C. Heath & Co. 30 cents.
Colvin, Sidney. Letters of John Keats to his Family and Friends. Macmillan & Co. $1.50.

Branch during summer season, Store No. 1, Grand Union Hotel, Saratoga Springs.

Coast of Maine.
CAPE ROSIER.
The lands of the "Cape Rosier Associates" on Penobscot Bay, 50 miles nearer Boston and the West than Bar Harbor, Mt. Desert, are offered for sale in parcels of five and ten acres and upwards. These lands comprise over ten miles of almost continuous shore-frontage in one of the boldest and most beautiful sections on the coast, twelve hours' journey from Boston. They front upon fine harbors, have beautiful rocky shores, beaches, woods, and mountain views. The drives along the shores and among the hills are very varied and beautiful. New wharves have been built, and new connections with daily trains and steamboats established. In these lands is offered an exceptional opportunity to purchase for very small sums fine and perfectly protected seashore estates. The lands will not be sold for speculation or in small lots.

Mr. Louis Dyer's New Book.

STUDIES OF THE GODS IN GREECE

At Certain Sanctuaries Recently Excavated. Being Eight Lectures given in 1890 at the Lowell Institute. By LOUIS DYER, B.A., Oxon., late Assistant Professor in Harvard University. With Maps and Plans. 457 pages, crown 8vo, cloth, $2.50.

"Marked throughout by wonderful reason and moderation, and openness to the evidence on all sides of matters in dispute. With singular grace and felicity of phrase, with abundant learning, and with accuracy due to personal observation, Professor Dyer explains the development of the cults of Demeter, at Eleusis and Cnidus, of Dionysus, in Thrace, Icaria, Athens, and Eleusis; o Æsculapius, at Epidaurus and Athens; of Aphrodite at Paphos, and of Apollo at Delos. What gives the work its most admirable quality is the success of the author's effort to put himself at the Greek point of view. The gods are treated with the reverence that is due to them, and the fact is emphas zed that there is much in Christianity which is of Greek rather than Jewish quality."—*New York Tribune.*

"The volume is marked by breadth as well as depth of scholarship, and is full of spirit and zeal in treating of the subjects in hand."—*New York Times.*

LIFE OF
Jane Welsh Carlyle.

By MRS. ALEXANDER IRELAND.

8vo, 330 pages. Portrait.

The publication of this book is a literary event. It is a remarkable biography of a wonderful woman, written and compiled from materials never before made public. The powerful side light it throws upon the life and character of Thomas Carlyle will make the volume indispensable to all who venerate the genius, or are interested in the personality, of the Sage of Chelsea.

Vellum cloth (half bound), gilt top, $1.75.

Postpaid on receipt of price.

MRS. THROOP'S SCHOOL FOR Young Ladies and Children.—College Preparatory. Reopens September 30, 1891.

MASSACHUSETTS, Worcester.
JOHN W. DALZELL'S PRIVATE School for Boys, 66 West St.—Prepares for College or Scientific School. Send for Catalogue.

MICHIGAN, Orchard Lake.
MICHIGAN MILITARY ACADEMY. —A College Preparatory School of the highest grade. Location thirty miles from Detroit, and unsurpassed for beauty and healthfulness. For catalogue, address Col. J. S. ROGERS, Supt.

MINNESOTA, Duluth.
THE HARDY SCHOOL.—A COLLEGE Preparatory School for Girls. Reopens September 23, 1891. Certificate admits to Smith, Wellesley, and other Eastern Colleges. Native teachers in French and German. Special departments in Art and Music. A handsome new building, with ample grounds. For circulars or information concerning the school, apply to KATE B. HARDY, ANNA R. HAIRE, Principals.

MINNESOTA, Faribault.
SHATTUCK SCHOOL, ONE OF THE best equipped Church Schools for Boys. Specially thorough fitting for College. Ask for catalogue. JAMES DOBBIN, D.D., Rector.

NEBRASKA, Lincoln.
THE UNIVERSITY OF NEBRASKA opens Sept. 16. Academic and Industrial Colleges, Law School, and Experiment Station and Farm. Tuition free to residents of Nebraska.

NEW JERSEY, Freehold.
FREEHOLD INSTITUTE.—COLLEGE preparation a specialty. For boys only. Early application advisable. Boys taken through summer. A. A. CHAMBERS, A.M.

NEW JERSEY, Lakewood.
LAKEWOOD HEIGHTS SCHOOL.— Among the pines. A thorough and attractive school for boys. Opens Oct. 1. JAMES W. MOREY, Prin.

NEW JERSEY, Lawrenceville.
LAWRENCEVILLE SCHOOL, JOHN C. Green Foundation. Early application for admission is advisable. For catalogue and information, address Rev. JAMES C. MACKENZIE, Ph.D.

NEW JERSEY, Matawan, Monmouth County.
DR. JAGGAR'S SCHOOL. $300.

NEW JERSEY, Morristown.
MISS E. ELIZABETH DANA'S School for Young Ladies reopens September 23. Terms—Board and tuition in English, Latin, and Greek, $600. Circulars on application.

NEW JERSEY, Morristown.
ST. HILDA'S SCHOOL FOR GIRLS will reopen Sept. 28. Terms $250. Music extra. *Summer session.* Circulars sent on application.

NEW JERSEY, Mount Holly.
MOUNT HOLLY ACADEMY FOR Boys.—Between Philadelphia and New York. Healthful, helpful, homelike. Education with formation of character. College prep., English, and business courses. $400 per year. HENRY M. WALRADT (Yale), Prin.

NEW JERSEY, Princeton.
THE PRINCETON PREPARATORY School opens Sept. 17. Inquiries may be addressed to President Patton of Princeton College, or to J. B. FINE, Head-Master.

NEW YORK, Albany.
ST. AGNES SCHOOL.—UNDER THE direction of Bishop Doane. 21st year. Full courses of study from Kindergarten through Harvard Course for Women. 34 instructors. Tuition $400 a year. For catalogue address St. Agnes School.

NEW YORK, Brooklyn, 160 Joralemon Street.
MISS KATHERINE L. MALTBY, B.A., formerly Principal of the Nassau Institute, will open her spacious and inviting residence Sept. 24, 1891, for the reception of young ladies who desire to spend a winter in the city in the enjoyment of its art or musical advantages; for students who will attend the sessions of day schools in Brooklyn; or for pupils who wish special instruction under her charge. 3d Year. Address for Circular, Miss MALTBY, Prin.

NEW YORK, Brooklyn, 140-142 Columbia Heights.
THE MISSES ELY'S SCHOOL FOR Girls will reopen September 30.

NEW YORK, Buffalo, 284 Delaware Avenue.
BUFFALO SEMINARY.—THE FOR- ty-first year begins Sept. 16. For circulars address Mrs. C. F. HARTT.

NEW YORK, Buffalo, St. Margaret's Place.
ST. MARGARET'S SCHOOL, BOARD- ing and Day School for Young Ladies, reopens Sept. 16, 1891. Special Course of Study. College Preparatory. For circulars, address Miss TUCK, Principal.

NEW YORK CITY, 1961 Madison Avenue.
CLASSICAL SCHOOL FOR GIRLS.— Primary and advanced work. Certificate accepted by Wellesley and other Colleges. Delsarte Gymnastics. Reopens Sept. 29. Miss NORTH and Miss BARNES, Principals.

Schools.

NEW YORK CITY, 525 Park Ave., cor. of 61st St.
ACADEMIC CLASSES FOR GIRLS.— Open Oct. 1. Preparation for the Harvard Examinations, Barnard, and other colleges for women; number limited; special attention to English, elocution, and physical culture; daily instruction and practice in Delsarte gymnastics. MARY B. WHITON, A.B., and LOIS A. BANGS.
References—The Hon. Seth Low, Pres. Columbia College; the Rev. L. Clark Seelye, D.D., President Smith College, Northampton, Mass.; Truman J. Backus, LL.D., Principal of Packer Institute, Brooklyn; James G. Croswell, Head Master of the Brearley School for Girls, N. Y.

NEW YORK CITY, 423 Madison Avenue.
J. H. MORSE'S SCHOOL FOR BOYS opens October 1. For circulars and information, address the Principal at Cotuit, Mass.

NEW YORK CITY, 55 West 47th Street.
MISS GIBBONS' SCHOOL FOR GIRLS will reopen Sept. 30. Three boarding pupils will be received into the family.

NEW YORK CITY, 32 and 34 East 57th Street.
MISS PEEBLES AND MISS THOMP- SON'S Boarding and Day School for Girls reopens Thursday, October 1, 1891.

NEW YORK, Fort Edward.
FORT EDWARD COLLEGIATE IN- stitute for Young Women. Superior buildings, appointments, and advantages. $240. Send for illustrated Catalogue. Jos. E. KING, D.D., Pres.

NEW YORK, Garden City, Long Island.
THE CATHEDRAL SCHOOL OF ST. Paul, a thorough preparatory school of high grade. Military Drill. Address for July and August. CHAS. STURTEVANT MOORE, A.B. (Harv.), Scarboro Beach, Me,

NEW YORK, Lake George.
MRS. ELIZABETH EGGLESTON SEELYE will receive a few children into her family at Joshua's Rock on Lake George, to be taught with her own children by a private teacher, at moderate rates. Healthful location. Home care. Highest references if desired.

NEW YORK, Manlius.
ST. JOHN'S MILITARY SCHOOL.— Civil Engineering. Classics. Business. Under the visitation of the War Department. Military under U. S. Army Officer. Address WM. VERBECK, Supt.

NEW YORK, Newburgh.
SIGLAR'S PREPARATORY SCHOOL. —The mistake in bringing up boys begins at eight. A pamphlet. ($600 a year.) H. W. SIGLAR.

NEW YORK, New Rochelle.
THE COLLEGIATE INSTITUTE, "The Castle." Boys prepared for college or business. Rooms elegantly furnished. Military instruction. Pupils limited. For illustrated catalogue, address H. F. FULLER, M.A., Principal.

NEW YORK, Pine Plains.
SEYMOUR SMITH INSTITUTE.— Healthful, homelike, select, thorough. Address Rev. A. MATTICE, A.M., Principal.

NEW YORK, Saratoga Springs.
TEMPLE GROVE SEMINARY.—SU- perior facilities for the higher Sciences, Philosophy, Languages, Music, Painting, social culture. 37th year begins Sept. 16. Address CHAS. F. DOWD, Ph.D., Pres.

NEW YORK, Sing Sing.
ST. JOHN'S SCHOOL.
Rev. J. B. GIBSON, D.D., Rector.
Edward B. Bostwick, M.A., Warren S. Adams, M.A., Associate Principals.
Prepares for college, scientific and Government schools, or business life; military system, extensive play grounds, gymnasium, laboratory, and boys' workshop. Special provision for the care of younger boys. The 23d year will begin Sept. 15, 1891.

NEW YORK, Syracuse.
MRS. ALFRED WILKINSON'S School for Girls. Reopens September 30, 1891. Refers to Hon. Abram S. Hewitt, George Wm. Curtis, Hon. Wayne McVeagh, Rev. Edward Everett Hale, Thomas Wentworth Higginson, Hon. Andrew D. White.

NEW YORK, Syracuse.
KEBLE SCHOOL.—Boarding School for Girls. Under the supervision of the Rt. Rev. F. D. Huntington, S.T.D. The *twenty-first* school year begins Wednesday, Sept. 16, 1891. Apply to Miss MARY J. JACKSON.

NEW YORK, Tarrytown-on-Hudson.
IRVING INSTITUTE.—PREPARES boys for college or business. New gymnasium. The thirty-seventh session opens September 16, 1891. Address JOHN M. FURMAN, Principal.

The Nation.

NEW YORK, THURSDAY, AUGUST 13, 1891.

The Week.

SENATOR Sherman is picking his way over the stones in Ohio in his usual circumspect manner. He has written a letter to the Urbana *Citizen* to define his position on the McKinley tariff. We print the essential part of it in juxtaposition with what he said in the Senate concerning a much lower tariff than that of McKinley:

SHERMAN ON THE M'KINLEY TARIFF.

The policy of a nation upon economic questions should be fixed and stable. The McKinley law as now framed, though it may be open to criticism as to details, is a strictly protective measure, fair and just as applied to all industries, with ample provisions to secure reciprocity in the exchange of domestic productions for articles we cannot produce. It ought to be thoroughly tested by the experience of several years. It is not good policy to disturb it or keep the public mind in suspense about it. It will, as I think, demonstrate its wisdom, but if not, with the light of experience, it can be modified. The highest policy and the greatest good to our people lie in the full trial of this effort to establish upon a firm foundation the domestic production of every article essential to American life and independence.

SHERMAN ON THE TARIFF BILL OF 1872.

It must be remembered that the present duties, taken together, are far in excess of what they were before the war, and that they have been three times largely increased since the passage of the Morrill Tariff Act of 1861. . . . The result of such duties is to secure to mechanical industries higher wages than can be earned in other kindred employments. Such excessive protection not only ceases to diversify production, but forces labor into protected employments. If the present rates of duty were high enough during and since the war, when home industry was burdened with heavy internal taxes—with stamp duties, income taxes, and high rates on raw materials—then surely they are now too high when all these taxes are removed.

The falling off in dutiable imports during the first nine months of the operation of the McKinley Bill is given by the Bureau of Statistics as $55,543,692. These figures, while no doubt correct, are yet misleading in one important particular. We refer to the extra amount of tin plate imported in the period in question, in order to anticipate the increased duty going into effect July 1. A high English authority estimates the sales of Welsh tin plate to American purchasers since last October at $10,000,000 above the average sales for a similar length of time in foregoing years. This estimate falls in very well with the Treasury returns of the imports of tin plate for the eleven months ending May 31, as compared with the same part of the preceding year, which show an increase in the former period of $10,100,000. Thus it is perfectly clear that in the future, now that the McKinley tax on tin plate is actually in force, another $10,000,000 should be knocked off our importations, making the total falling off more than $65,600,000. This ought to mean an extra $10,000,000 worth of happiness to the McKinley organs, but it will not. Their chorus of delight at finding the total of imports actually increased under the new tariff shows that they do not really believe in their own professions, and were in great alarm lest the Republican party should have to bear the odium of having contracted the nation's foreign commerce. Moreover, deep down in their hearts they are quaking for fear they will have to enter the next campaign with the burden of a Treasury deficit on their backs, and would secretly be glad to see the dutiable imports mount up to any figure if only the gaps made in the Treasury by extravagant legislation could be filled.

The Republican Club Convention at Syracuse had very little excuse for being, its sum total of achievement having been the passage of a set of resolutions which are in part perfunctory and in part unintelligible. The perfunctory parts are the endorsement of the Administration of President Harrison (no separate mention of Blaine); approval of the doctrine of protection to American labor (no separate mention of the McKinley Bill); approval of "a fair ballot and a fair count" (no separate mention of the Force Bill); approval of judicious and liberal pension laws (no special mention of any bill). The unintelligible part is the demand for "a bimetallic currency based on sound financial principles that will protect the producer and consumer."

An interview with Senator Carlisle is published by the Philadelphia *Ledger* in which he expresses the opinion that the incoming Congress will pass a free-coinage bill, and that President Harrison will be greatly embarrassed by it. The Senator may be right in his conception of the action of Congress, but he is very much "out" if he thinks that President Harrison would be embarrassed by the passage of a free-coinage bill. On the contrary, the opportunity of vetoing such a bill would be welcomed by him with avidity, since it would change the issue upon which the Republicans were so tremendously thrashed last fall. Anything which promises a change is pat to his hand. It does not make much difference what the change is. No political disaster could be worse than that which the McKinley tariff brought upon the party. Therefore any change will be welcomed, especially a change which brings with it some moral character, an element in which the party has been much lacking of late. To veto a bill which looks to depreciation of the currency and to cheating creditors, would be an act of moral elevation that would attract thousands of voters who are not now friendly to Mr. Harrison or to his party. The embarrassment would be very much on the other side.

The *Financial Chronicle* makes an analysis of the Treasury statements for August 1. These show a net gain of $1,986,273 in the Government's holdings of cash in subtreasuries and in national banks during the month. But on the other hand the disbursements for interest in July were about $4,000,000 less than normal, owing to Secretary Windom's prepayment of the same. In other words, if things had run on in the customary way, the August statement would have shown a loss of about $2,000,000 in cash holdings. The *Chronicle* goes on to show that since the 1st of January there has been a shrinkage of $31,000,000 in the public revenues, while the expenditures for the same period have increased $36,385,000. It should be added that the maturing 4½ per cent. bonds are due on the 1st of September, and that there are about $29,000,000 of those bonds still to be accounted for. The holders of that amount have not yet signified their wish for an extension at 2 per cent. There are good reasons to believe that most of these bonds will be presented for payment. One reason for thinking so is that the money can be used at better rates than 2 per cent. Another reason is, that if the holders take their pay now, they will get it in gold, whereas it is just possible that they may get it in silver if they wait. If twenty millions should be called for on the 1st of September, the Secretary's gold balance would perhaps be cut down to the $100,000,000 constituting the greenback-redemption fund. Anticipating this approach to the $100,000,000 fund, the Philadelphia *Press* of August 8 has an editorial article urging Secretary Foster to make a declaration beforehand that he will sell bonds to recoup his gold reserve if necessary. This article derives considerable weight from the paper's semi-official relations to the Administration.

The statements given out by the Treasury officers regarding the effect of the bond-extension policy on national-bank circulation are extremely misleading. It would appear from these interviews that the banks are expanding their circulation rapidly by use of the new 2 per cents; yet the regular official bulletins show nothing of the kind. On the first of July the Treasury circular reported $22,638,450 of the 4½ per cents held as a basis for bank circulation. On the first of August the same account showed $16,772,650 of the 4½s, and $5,942,950 of the 2 per cents; a total of $22,715,600, or less than $80,000 increase for the whole country. Even this small increase, moreover, was offset by a decrease of $375,000 in holdings of the same bonds as security against public deposits, so that the banks now hold $300,000 less of the 4½s and 2s than they held of the 4½s alone a month ago. It is quite true that there has been an increase in total bank circulation during the month, but the new circulation

has been based almost wholly upon the 4 per cents and currency 6s, and most of these bonds were already deposited by the banks as security for Government deposits. The rapid decrease in the public-deposit account left a considerable amount of these bonds free, and, rather than sell them in a dead market, the bankers have simply transferred them to the account of note circulation.

Considering the general condition of our investment market, the readiness of the public to take shares in newly incorporated business houses is the phenomenon of current finance. Within a month, three important firms have advertised their corporate shares for outside subscription, the aggregate amount of stock offered being $4,000,000. In each instance, the shares were promptly subscribed for; in two cases they were "oversubscribed" long before the prescribed time-limit was reached. Yet, in the face of this, it has been found impossible to sell a single new issue of railroad bonds; a new stock issue of an important railway, offered at a heavy discount, had to be taken almost entirely by the company's shareholders; and even cities in excellent credit, such as Cincinnati, St. Louis, and Brooklyn, have sought in vain for a market for their bonds. The phenomenon would be less puzzling if we were to assume, as some authorities are disposed to do, that the former partnership interests in these enterprises have bought up the bulk of the new stock, leaving only an insignificant proportion for outsiders. But this is not easy to prove, and it is rendered improbable by the quick succession of such subscription offers, involving, as each of them does, enormous advertising and commission expenses. If it were known to the projectors that previous public subscriptions of the kind had not been successful, it is safe to suppose that they would wait for a few months, until the investment community had regained its equanimity, before undertaking their own experiment. Moreover, it should be noted that London's investment market presents the same anomaly. The public subscriptions to new loans and shares in that city average nearly 50 per cent. less than in 1890, and the reader will look in vain along the list for railway bonds and shares. The recently reported sale in that city of $5,000,000 bonds of an American railway is much doubted by financiers, and it stands in any case absolutely alone. The falling off in England has affected chiefly the enterprises for colonial and South American development; here, the burden has come upon the enterprises for developing our own West.

Mr. Drew, the National Bank Examiner who was dismissed by the Comptroller of the Currency because of his course in regard to the Keystone Bank of Philadelphia, has sent to the Comptroller a long statement which the latter is likely to find a troublesome document. Let us say, before giving an outline of it, that, early in the investigation of the Keystone Bank scandal, Mr. Drew was put upon the witness-stand and gave testimony which made it of vital importance to have the Comptroller summoned as a witness. It was obvious that such a proceeding was necessary in order that the whole truth in the matter might be disclosed. The Comptroller was invited to appear before the Committee, but the Harrison Administration decided that it would not be advisable for him to do so, and that he must confine himself to a written statement in reply to Drew's testimony. That statement was prepared, but was not allowed to be sent and published until it had been carefully revised at a Cabinet meeting. It did not meet many of the points raised by Drew's testimony and that of other witnesses, and was, of course, far less satisfactory than an oral examination and cross-examination of the Comptroller would have been. Subsequently, Mr. Drew was dismissed because of a failure on his part to include $544,000 of Clearing-house certificates in one of his reports, in a list of the liabilities of the Keystone Bank. This report was dated January 24, 1891, and his dismissal was dated July 2, 1891.

In his statement Mr. Drew says that his report of January 24 was plainly marked on its face "Preliminary," was characterized by him in an accompanying letter as "a sort of an abstract," thus "intimating a fuller and more trustworthy report to follow, and which did in fact soon follow, with the omitted item entered in full." The second report was accompanied by a letter explaining that the omission in the preliminary report had been a "sheer accident." After this explanation, which may be taken for what it is worth, Mr. Drew goes on to make some very serious charges against the Comptroller in reference to his conduct towards the Keystone and Spring Garden National Banks. He declares that "early in 1890" the names of these banks were furnished by him to the Comptroller as "banks whose condition was so unsatisfactory, and whose methods were so objectionable, as in my (Drew's) opinion, to require especial attention on the part of his office"; that his "reports for a long period, particularly of July 3, 1890, showed the Keystone National Bank then to be in a very unsatisfactory condition, requiring an immediate and radical change of management and of method"; that when the Keystone Bank took out Clearing-house certificates in November, 1890, and when in the "run" of December, 1890, such certificates to the large amount of $730,000 were advanced to it, he kept the Comptroller fully informed; that on February 13, 1891, the Comptroller, at Drew's suggestion, visited the Keystone Bank and personally saw its Clearing-house account; that on February 16, and on February 28, 1891, Drew sent to the Comptroller reports giving a full account of the bank's affairs; that in addition to these official reports, he sent to the Comptroller on June 8 and 13 private letters giving him the exact facts about the bank's condition, and that the Comptroller subsequently informed him of the receipt of these letters. The Comptroller closed the Keystone Bank on March 20, 1891, or more than a year after Mr. Drew declares that he informed him of its unsatisfactory condition. Why did he allow it to remain open so long, and, after he had closed it, why did he dismiss the Examiner for an error in a report which was made five months earlier, and which was corrected almost immediately? These are questions which make it more imperative than ever for the Comptroller to take the witness-stand.

Mr. James Russell Lowell died yesterday at his home in Cambridge. We give in another column a critical account of his career and of his place in the world of letters. But no tribute to his memory in the *Nation* would be complete or adequate which failed to mention how much it owed to his sympathy and encouragement from the day of its foundation, and how unstintingly these were given to its conductors. His rare contributions to its columns, though very valuable, were but a very insignificant part of the support it received from him. What was most valuable was his constant and very frequent private expressions of praise and appreciation. These never ceased for any great interval during twenty-five years of good and evil report, and they, we need not say to readers of his works, and still less to those who knew the man himself, came from the hand of a master in politics as well as in literature, and, what was still better, from the hand of one of the warmest and stanchest of friends. Of no American of our time might it be more truly said, "Nec vero ille in luce modo atque in oculis civium magnus, sed intus domique præstantior. Qui sermo, quæ precepta!"

The downfall of prohibition in Kansas appears to be complete. The amendment to the Constitution was adopted in November, 1880, by a vote of 92,302 to 84,304, and provides that "the manufacture and sale of intoxicating liquors shall be for ever prohibited in this State, except for medical, scientific, and mechanical purposes." A Legislature chosen at the same time passed an act to enforce the amendment the following winter, so that the system has now had a ten years' trial. The results are summarized in a letter just published from E. Leonardson, "State organizer Prohibition party." Mr. Leonardson begins with the frank confession that "there is more liquor sold and drunk to-day in Kansas than at any time since the passage of the amendment. There is a general letting down all over the State." Coming down from generals to particulars, he says that "there are about 150 saloons and four wholesale liquor houses in Leavenworth" (population, by the new census, 19,768); that "there are about 130 in Atchison [population 13,963], also a brewery with a wagon running on the street selling beer"; that "nearly all the large towns are collecting re-

venue from the saloons"; that "many of the small towns are following the example of the larger ones"; and, finally, that "unless something is done to open the eyes of the people to the facts, fair Kansas will soon be under the power of the saloon."

A remarkable contribution to the Presbyterian controversy over Prof. Briggs appears in the *Evangelist* of August 6. It will be remembered that the convincing argument against delay in dealing with the case at the Assembly, last May, was that it was "now or never"; that is, that, under the terms of the compact between the Assembly and Union Seminary, veto of an appointment to a professorship must be exercised within a year, or else the right to use it would lapse. Now comes a Scranton lawyer, Mr. Torrey, pointing to the fact that no such limitation whatever appears in the original compact made with Union in 1870; it was introduced in 1871 in the compact made with Lane and Auburn Seminaries. Coming thus a full year after the closing and execution of the contract with Union, there is no legal ground whatever, so Mr. Torrey convincingly argues, for saying that the Assembly could not defer action in the case of a Union professor without losing the right to act at all later on. Moreover, he goes on to show that, as a matter of fact, the Assembly in 1879 and 1880 actually had deferred action on the election of professors until more than a year after the same, and that, too, in the cases of Lane and Auburn, where the time-limit was specifically set down in the compact. Of course, the case is closed now, as far as the Assembly is concerned, and all this is of no practical avail, but it is of interest as bringing out the amazing fact that amid all the wrestling of the ecclesiastical constitutional lawyers at Detroit, no one actually went to the record to see what the facts were. It is perfectly clear that if Mr. Torrey's presentation of the case could have been laid before the Assembly, the wind would have been completely taken out of the sails of the "now or never" men, and the appointment of Prof. Briggs left over to await the action of the New York Presbytery.

Mr. W. E. Bear, the well-known English writer on agricultural statistics, supplies to *Bradstreet's* a "rough estimate" of the shortage in the wheat harvests of Europe this year, and of the sources of supply from other parts of the world. Mr. Bear's estimate, it should be noted, takes account of the short rye crop as an element in calculating the demand for wheat. He begins with Russia, whose wheat production last year (including Poland) was about 212,000,000 bushels and her exports about 90,000,000 bushels. This year Mr. Bear thinks her crop will not be over 180,000,000 bushels and her exports not above 40,000,000. Austria-Hungary falls short this year 27,000,000 bushels as compared with last year. The country will not be able to spare more than 8,000,000 bushels. Rumania has a good crop and may be able to spare 30,000,000 bushels. Bulgaria and Servia may export 12,000,000 bushels. The power of the exporting countries of Europe to supply the importing countries is thus set down at 90,000,000 bushels as a maximum. The importing countries will have a deficiency of 371,000,000 bushels, so that Europe in the aggregate will be under the necessity of importing 281,000,000 bushels from the other quarters of the world. What countries can supply this amount? Mr. Bear thinks that India may furnish 33,000,000 and the United States 144,000,000, leaving still a shortage of 104,000,000 to be looked for in Australia, South America, Canada, Asia Minor, Egypt, etc. Mr. Kains-Jackson shows that this wheat requirement of Europe will call for ship room of 5,600,000 bushels per week average for the whole year. The editor of *Bradstreet's* considers Mr. Bear's estimate of the European deficiency rather under than over the mark.

The French have evidently had a thorough inoculation with protectionism, and are all the while breaking out with it in unexpected places. The law for the regulation of the practice of medicine which lately passed the Chamber is so purely a domestic concern that one would scarcely look for a blow at the "foreign devil" in it—but there it is. Some of its provisions of purely French application are open to objection, as, for example, its abolition of health officers, and its imposition of a fine of from 100 to 1,000 francs upon a priest or sister of charity who should venture to prescribe remedies of any kind to the sick. Both the clauses aim, of course, to give a monopoly to regular physicians as against unlicensed practitioners, as does also the particularly absurd one prohibiting a pharmacist, even if a graduate in medicine, from prescribing; but the worst of all is that forbidding a foreign doctor to practise in France, even temporarily, without obtaining a degree from a native school. It would seem that the suicidal effect of such a law would be at once apparent in view of the great numbers of foreign invalids who, with their own physicians, seek the health resorts in the south of France every year. Doubtless there was some prevision of this in that clause of the bill which authorizes the Government to make exception of a certain number of cases when asked to do so by foreign ministers; but even this qualification leaves the measure an especially narrow and benighted one. Not even physicians of souls are to escape, it would appear, if they are foreigners. The Minister of Justice and Worship is about to make an investigation of the nationality of priests in the various parishes of the city of Paris. Those who turn out not to be French citizens are to be deprived of their livings, and it is said that some fifteen or sixteen are in that unfortunate plight. Finally, the hated foreigner is to have no place in the system of public education. The Minister of Public Instruction has lately sent a circular to principals of *lycées* and colleges, informing them that foreigners are not to be allowed to act as teachers or assistants in any schools above the primary grade, unless they first secure permission from the Government to take up their domicile in France, this authorization to be valid for five years only, at the end of which period they must become naturalized French citizens or lose their positions. Thus are the blessings of protection extending.

With the characteristic folly of protectionists, the French Chamber has decided that the general tariff which has just been enacted for France shall apply equally to all her colonies. The Chamber refused an adjournment of the debate, which was proposed in order that the representatives of the colonies might prepare their case, and insisted upon the measure in spite of all reason. A deputy from Martinique declared that if it became a law, it would be for the colonies a radical revolution. It would involve not only an abandonment of the existing colonial policy, but would necessitate an entire change of the policy upon which the colonies regulated their interior affairs. The different productions, the different manners, the different needs of the colonies are wholly disregarded by this extraordinary measure, and it is almost amusing to see such a crushing blow dealt to its own colonies by a Power that has been at such great pains to establish and extend them. The French seem to regard their colonies now just as England looked upon hers during the last century, as mere plantations established for the benefit of the traders of the home country, and are going through England's experience that the traders of the home country can be benefited only by a policy that allows free development to its colonies.

The report upon public instruction in France contains some interesting figures. Confining our attention to intermediate schools, it appears that the practical monopoly of education by the Government has nearly extinguished the private schools not supported by religious denominations. They have decreased in number since 1876 from 494, with 30,000 pupils, to 250 in 1891, with only 15,000 pupils. On the other hand, the religious schools, in spite of most oppressive legislation, show a considerable increase. In 1876 they numbered 309, with 46,800 pupils, and in 1891 they had increased to 352, with 51,200 pupils, and the 139 *petits séminaires* had in addition more than twenty thousand pupils. Comparing these numbers with those of the Government schools, it seems that about one-half of the youth of the middle class are still educated outside of the Government institutions. In both classes of schools a marked decrease in the number of pupils boarded in the institutions has taken place. The cry is already heard that the fees now charged for schooling should be remitted, but it cannot be said that any movement in this direction has yet manifested itself.

MR. M'KINLEY'S EXPLANATION OF THE TARIFF.

THOSE of the people of Ohio who were gathered at Lakeside a few days ago, had the privilege of listening to a speech upon the tariff by Mr. McKinley that is described by men who have heard him often as one of the strongest he has ever delivered. As it is desirable to know all that can be said in favor of the measure with which Mr. McKinley's name is associated, we shall try to present the main points of this speech. The first point emphasized was that "the subject of the tariff, stripped of everything else, is simply the subject of taxation." But as we are immediately told that taxation is necessary to every municipality, it is plain that the subject of taxation is not always the same as the subject of the tariff. It is fair to say, therefore, that Mr. McKinley meant that the tariff was a tax, but not the only kind of tax. That this was his meaning is apparent from the subsequent statement that there are two forms of taxation: "The one is the direct system of taxation and the other the indirect system, or a tariff tax."

As to the direct system of taxation, Mr. McKinley dismisses it briefly with the assertion that "there is no considerable sentiment in the United States in favor of raising $360,000,000 by a system of direct taxation. . . . Therefore the Government is remitted to that other form of taxation that is commonly called tariff taxation—that is, taxing somebody else's property rather than our own; taxing the property of other nations seeking a market in the United States." It seems strange that Mr. McKinley should have omitted to mention that system of taxation known as the internal revenue, which cannot be described as either direct or indirect taxation according to his definition. It is almost incredible, considering that he has been a member of Congress for some years, that he has not heard of the existence of the taxes upon liquors and tobacco; and if he knew of such taxes, he should not have made the classification that he did. It is strange, also, that he did not mention the sugar duties. If the tariff is "taxing somebody else's property," why did the McKinley Bill throw away fifty millions of dollars per year that foreigners were paying into our treasury?

Leaving this matter, we would call attention to another error into which Mr. McKinley has evidently fallen, especially as it is an error common among protectionists—the error of supposing that a tariff is a tax "upon somebody else's property rather than our own." This error on Mr. McKinley's part may be explained, if not excused, by his having passed his life in an interior State and having had few educational opportunities. He evidently labors under the impression that foreign governments take the goods produced in their respective jurisdictions, bring them over here and pay the duties imposed by our Government, and then sell them to American citizens for whatever they can get. Some one ought to point out to Mr. McKinley's audiences that such commerce as this exists only in his imagination. As a matter of fact, American citizens generally sell their products to the citizens of foreign countries and buy goods with the proceeds, paying the duties upon the goods to their own Government. The tax is paid in most cases by American citizens; but it is in reality a tax upon commerce, and may affect the price of exports as well as that of imports. There is certainly no evidence that "the property of other nations" ever passes through our custom-houses.

Apparently, Mr. McKinley is not altogether satisfied with this explanation of the incidence of taxation, for he immediately proceeds to abandon the position that the tariff is a tax and nothing else. There is a tariff for revenue, but there is also a tariff for protection, and that is the kind of tariff he favors. If he felt sure that the tariff was a tax only upon the property of foreigners, he would scarcely propose to give up this simple and convenient means of paying our expenses. As he justly says, you cannot have revenue without having importations; and although revenue is a good thing, yet it is better to go without it than to have it at such a price. "Every importation of foreign competing products displaces the purchase of that much domestic products, which ought to be produced by the American people."

At this point in his speech, Mr. McKinley becomes quite incoherent, being excited by the spectacle of a glass tumbler upon which the tariff is 60 per cent., nor does he attempt further argument or return to the subject of taxation. He refers to the period between 1846 and 1861—a period when the census reports show that our material progress was more rapid than at any other—as a period when we had a genuine revenue tariff. "During that time there was the Mexican war, the famine in Ireland, the European war, the Crimean War, and in the meantime there was the great discovery of gold in California; yet with all these helps to American manufactures, commerce, and trade, the revenue-tariff policy of 1846 signally failed to supply the revenue needed for the Government." Possibly if further help had come in the shape of a universal epidemic of smallpox and cholera, together with frequent earthquakes and destructive floods, this result might have been different. As the Government did not then need a revenue of $500,000,000 a year, but a little more than one-tenth of that sum, as its revenues were ample for its purposes, and as American manufactures, commerce, and trade flourished as they never had flourished before and never have since, Mr. McKinley's lamentations are unnecessary. If he had cared to pursue the subject of taxation, he might have added that the taxes per caput during that period were less than half what they are now.

With a degree of confidence in the ignorance of his audience which we trust was unjustifiable, Mr. McKinley argued that a revenue tariff is unwise because at one time under such a tariff the bonds of the Government were at a discount of 12 per cent. As to the discount under a protective tariff, he is silent. As a matter of fact, the protective tariff did operate to depress the value of our bonds, as Mr. Bagehot has shown, while the revenue tariff did not; but it is scarcely worth while to consider the question at length. Mr. McKinley repeats the foolish statement that 99 per cent. of the duty upon raw material imported is refunded by the Government when the material is manufactured and exported. As the expense of collecting the duties is nominally 3 per cent., and really a good deal more, the Government pays a bounty to traders who will furnish goods to foreigners at a cheaper rate than our own people can get them. Mr. McKinley commits himself to tin in the following positive language: "Mark my words: inside of four years you will get cheaper tin than you ever got before, and it will be American tin, made in American mills, from American raw material, by American workingmen, for the American people." This may be worth remembering, and it is at all events a fair specimen of the logic of Mr. McKinley's speech, which we are quite willing to believe is "one of the strongest he has ever delivered."

SOCIOLOGY AND THE CHURCH.

THE customary summer jokes about closed churches and clerical trips to Europe have scarcely had their usual run this year. They were never exactly brilliant, and have had most of their reason for existence in the nervous wincing at them visible in the churches themselves. But that is about gone now, and the practical cessation of church life in the city is accepted as inevitable during the summer time. In other words, the churches have come to perceive and frankly acknowledge that they are but a part of the life of society, by the customs and trend of which they are and must be largely shaped. This has always been an historical fact, as recent investigations of the powerful influence of its environment upon early Christianity have convincingly shown; but the churches themselves are more acutely conscious of it now than ever before.

This change of feeling is leading to still greater changes in practice. When the Church considered itself as in but not of the world, its contact with society at large being mainly for the purpose of rescuing an individual here and there from a corrupt and doomed social order, it inevitably had an air of aloofness and condemnation. But now that it is coming to the conception of Christianity as but an element in the whole movement of civilization, it necessarily feels its solidarity with the social organization in which it exists, and thinks more about bettering and building up society as a whole than of snatching individual brands from the burning. The result is a far kindlier attitude towards projects for social reform, and a measurable recovery of lost enthusiasm through the new interest in sociological studies and experiments. In fact, the quickening of church zeal in that direction has been so marked that church leadership in philanthropic effort, now when it is given so largely a scientific basis, is almost as pronounced as it was in the days of its more strictly religious grounding. The feeling of "social compunction"—the name

a well-known writer gives to the vague sense of obligation to do something for the unfortunate classes in society—is stronger and commoner in no part of the community than in the churches.

And they are allowing it to work great changes in their thought and organization. Sociology is accorded a vastly more important place than formerly, for example, in the preparatory studies of the ministry. The recent founding of a chair of Sociology in a theological seminary is highly suggestive of the new point of view, as is also the fact that the professorship became at once the most popular one in the institution. Before that noteworthy event, practical training in sociological methods had been provided for here and there in the way of sending theological students to investigate certain social and social-religious questions in great cities. The tendency had, perhaps, its most striking emphasis in an address by President Hyde before the Congregational clergy in Boston. According to published reports, he flatly declares for the retiring of dogmatic theology to the extreme background of the seminary curriculum, and its virtual displacement by discipline in sociology. Such displacement is already an accomplished fact in the actual experience of multitudes among the younger clergy, who leave the Church Fathers and the system-makers unopened in order to read the latest monographs of social investigators, and reports on organized charity, prison reform, model coffee-houses, labor organizations, and the like.

We have already said that church people are among the readiest to accept the methods of applied sociology. A good instance of this is their very general willingness to cooperate with associations for organized charity. This willingness was rather slow in appearing. The special charities of the individual church were almost sacred to it, and it seemed little short of an outrage to ask it to merge these in the general charitable work of the community, or at least to allow its own records of names and gifts to be entered in the common register. But it did not take the associations long, after they were fairly at work collecting facts and making investigations, to convince the church authorities that charity by isolated and secret methods was a direct encouragement to professional mendicancy and fraud; and now, we believe, it is seldom that church records are not at their disposal for purposes of comparison. We might adduce other cases of a similar acquiescence on the part of the Church in forms and methods of benevolent work quite inconsistent with the older view that society as such could not be improved outside of its own organization and control. Wholly apart from millenarian views, the improvability of society and the possibility of a kingdom of heaven on earth are now generally accepted articles of belief. They derive largely from sociology.

No account of its influence upon theological conceptions should omit to notice the profound modifications which it has brought about in the whole idea of the economy of redemption. This was long conceived of from an intensely individualistic standpoint. The powers of good and evil were arrayed in deadly struggle for the possession of the individual soul, and Christ came to save not a race or a society, but a number of individuals. All that is rapidly disappearing—has gone, in fact, from the writings and sermons of all who do not take their teaching exclusively from the past. Now the talk is all of a race redemption, and of a salvation which has society in the mass as its objective. Doubtless this has been reflected back into theology from the sociological studies of the time; but that fact is of less importance than the practical effects of the change of view, and it is mainly to them that we have wished to call attention.

CITY BOARDERS AND THE FARM.

How essential it is that the various forces which bear upon a great social or economic question should each have its separate estimate, is brought out vividly in an article by Mr. Edward Hungerford on "Our Summer Migration" in the current number of the *Century*. Mr. Hungerford, with great skill and minuteness, sets forth the present and potential value of the city boarder to the farmer, and shows optimistically the relation of the former to country life in its various branches and especially in relation to rural decadence. Nearly all that Mr. Hungerford says pro and con on the question may be fully conceded, except the too large balance which he strikes in favor of city influence and city dollars in the summer home of the urban "boarder." It is the old experience over again, that a dozen points of reasoning, each good enough in itself, do not countervail the weight of two or three much more important considerations to be set in the opposite scale.

The first suggestion which presents itself in connection with Mr. Hungerford's too rosy views is, that while the city boarder may make the farmer's family more "æsthetic," may transmit a bit of culture, may help in the support of the family, may add somewhat to the local demand for minor farm products, and so on; yet the same boarder works in another way directly against the "farm idea," pure and simple. The whole conception of successful and real farming, both ancestral and present, involves the converging of the owner's full strength upon his land. Now, as in the old days, it is the story of close economies, of the toiling housewife, of the farmer himself battling with and subduing his stubborn soils. This is real farming, and is the farm life which in the old times brought out, in the "strength by struggle" form, the grand old race of yeomen whose passing we so justly deplore. Boarding-house-keeping in the country, with its constant tendency to "add a new wing," to take new boarders, and still more boarders, and finally to let the meadow go, provided only the truck garden "for boarders" can be kept up, is not farming. In fact, precisely as this boarding-house idea expands, that of old-fashioned farming wanes. The former idea may build up a race of truck-farmers, may create a body of rural boarding-house-keepers, may possibly in a few cases prevent an old farm from being abandoned or sold out at 10 per cent. of its former value. But does it positively and directly stimulate the genuine farming spirit and yeoman ambition or hopes? Is it not rather a substituted calling, which takes, or tends to take, the place of genuine agriculture?

Let us consider the subject in a more practical way so as to get a clearer perspective of it. If we exclude the younger children on the farm, who, sad to say, our census shows are decreasing, we may divide in our Eastern States the farm race into three groups. One is the old parental group, made up of the "old folks" fifty years or more of age, who, for manifest reasons, are pretty certain to remain on the farm for the rest of their lives. Next we have the grown-up daughters of the farm-house. Some of these leave the farm for the city or the West, but not, on the whole, many of them, save as they go in the migration of their young husbands. Finally, far more important than the other two groups, we have the "young-farmer" class, whether married or not. This is the class on whom really the whole farm problem centres. They form the great body of the long procession which streams to the cities and westward, subtracting from the farm the bone, sinew, brains, and aspirations of its life. To consider them and the relation to them of motives and influences is to consider almost the whole of the imperative and depressing farm question.

Is the contact of the city boarder with such a class stimulative of home ambitions or not? Whether the city boarder is intellectual, or artistic, or merely wealthy, is his or her example to the young son of the farm such as to make him contented with his lot? We might also refer, as does Mr. Hungerford, to the pernicious influence of a "fast" city element to be found at fashionable country places, but that we do not now put stress upon. The main point is, that the incursion upon him of city life for a certain number of months in the year makes even more visible than before to the young farmer the rise of classes above him, and infects him with the desire to make money and copy them. It is pretty hard, too, to conceive such a young man, spirited and ambitious, even if he have a natal love of the soil, remaining contented in the farm boarding-house, which, on the whole, must seem to him a grade below the independent farmer's position. This pride of his may be false and foolish, yet it is in him just the same as in other persons who by necessity are forced to the expedient of "taking boarders," which *per se* is perfectly honorable and praiseworthy. But even without this factor of pride, is not the mere contact of the young farmer with city culture and wealth a force which unsettles him and makes him restless more than it spurs his local energies?

We might speak of another point raised by Mr. Hungerford, namely, the future reflux of migration to Eastern farms after those at the West have been taken up. That in time it will come is probable, though

it may be seen only by our remote posterity. When it does come, however, will it be an eastward coming of actual farmers, or of the wealthy "fancy-farmer" type? Will it be a new "yeoman" class and actual owners of the soil, or a tenant-farmer group, or merely a plutocratic race of landholders, who, employing many hands, till their fifty acres each more for diversion than profit? The end of another century which may find New England in her rocky parts an English Cornwall or Devon, and in her more level areas an English Warwickshire, may answer the question. Meanwhile, such influences as the city boarder in the farm-house give us little light and less encouragement on the absorbing and pressing enigma, particularly that major part of it which bears upon the matter of making the young Eastern farmer less restless and more willing to abide on the ancestral acres.

THE INDUSTRIAL SITUATION IN FRANCE.

THE French Government having sown the wind by refusing to protect the omnibus-drivers who wished to work, against the assaults of the strikers and the mob that sympathized with them, is now reaping the whirlwind in an epidemic of strikes. The employees of the horse railroads at Marseilles, at Lyons, at Bordeaux, and at Toulouse followed the example of the Paris omnibus-drivers. Then the infection extended to the employees of the steam railroads, nearly all the great roads being affected, and great exertions being made by the members of the labor unions to make the strike universal. The bakers had their turn; the hair-dressers, the grocers, the shoemakers, all manifested discontent; and the workmen in the sewers joined in the demand for improved conditions.

The Municipal Council of Paris, a body as mischievously disposed as the Board of Aldermen in New York, eagerly took advantage of the opportunity to interpose in behalf of the unions. They proceeded to vote pecuniary aid "to the families of workmen who were out of employment," and the unions whose members were on strike very naturally considered that this was a subvention of their cause by the State. They assembled the striking workmen, and it was arranged that the sums to be distributed by the Municipal Council should be paid over by the recipients to their respective unions. The first vote of the Council was for but 2,000 francs, but, as the General Government apparently did not dare to veto it, it was presently followed by a larger vote intended for the benefit of other strikers, whose union in its turn directed its members to hand over their gratuities to the common treasury. This went on until the railroad strikes took place, a disturbance upon a much larger scale than those that preceded, when the Council again undertook, by the same transparent subterfuge, to furnish pecuniary aid to the unions of the strikers.

The situation of the general Government was by this time alarming. The employees of the railroads were engaged in work that affected the public interest very materially, although not directly employed by the Government, while the workers on the sewers were paid directly by the city. These workmen had formed a union, and there were reports of projected unions in the postal and telegraphic services. Certainly the families of the sewer workmen would suffer as much from want as those of other workmen out of employment, and they were therefore entitled to assistance from the Municipal Council. This aid would, of course, have been transferred to the union, and the extraordinary spectacle would have resulted of the city of Paris furnishing pecuniary assistance to an organized body of workmen on strike against the very city that was aiding them. This prospect overcame the timidity of the Government, and the Prefect of the Seine was at last forced to oppose the granting of further subventions of this kind, and, as his opposition was unavailing, to interpose his veto. Since then the French papers have been devoting themselves to explaining why unions of laborers employed by private persons are permissible and laudable and their strikes legitimate, while laborers employed by the State should neither unite nor strike. The distinctions are somewhat finely drawn, but the exigencies of the situation are such as to require that they should be made.

The railroad strike was not so extensive as the strikers hoped to make it, although it excited grave apprehensions for a time, and the present attack of the strike mania is probably over, but the future is by no means unclouded. As one of the members of the Paris Council declared, in reply to the contention of the Prefect that he did not need to treat with his employees through the medium of a union, the unions are bodies recognized by law. The State compelled the omnibus company to recognize the authority of the unions; how can it decline to recognize this authority when its own affairs are involved? As a matter of fact, the French Government has been for some time travelling upon a road that leads to eventual disaster. The compulsory-insurance scheme, upon which we have recently commented, is only one of a number of Socialistic experiments. A project for the establishment of a bureau of labor under the care of the Government has recently been brought forward, and the limitation of the hours of labor for women and children, with the necessary accompaniments of a force of Government inspectors of factories, will beyond question soon be established by law. Such experiments may not be disastrous in a country like England, where the pressure of taxation is light and the general spirit of the people is conservative, but in a society composed of elements so inflammable as those which exist in France, radical changes are perilous. The natural form in which discontent manifests itself there is in attempts to overthrow the Government, and the rapid formation of trade unions is likely to result in their participation in these attempts unless they are placated. To placate them, however, as the recent events have shown, leads directly to assisting them in their strikes, and to the formation of unions among Government employees. Whichever policy is adopted by the Government, it will encounter difficulties, and the difficulties to be encountered in steering a middle course will be even greater. It is easy to begin with a policy of opportunism, but this becomes harder and harder to follow, and ends in collapse.

JAMES RUSSELL LOWELL.

JAMES RUSSELL LOWELL was born at the residence called Elmwood in Cambridge, Mass., February 22, 1819. He came of a family which in every generation has rendered public service in some form. His father, the Rev. Charles Lowell, D.D., was prominent in his day as a clergyman, though now best remembered for the wholesome brevity of his sermons; he was one of the conspicuous early Unitarians, although he never would accept that or any other denominational name. Dr. Lowell's father was the Hon. John Lowell, United States Chief Justice for the New England circuit, who has permanent fame as author of that clause in the Massachusetts Constitution which abolished slavery, and it is worth noticing that he was also the author of an English poem in the Harvard "Pietas et Gratulatio" of 1761. Judge Lowell's father was the Rev. John Lowell, a clergyman of Newburyport, Mass., and there now hangs at Elmwood a painted panel representing this worthy divine, with several others, sitting around a table with pipes and tobacco, the motto being appended, "In necessariis unitas, in non necessariis libertas, in omnibus caritas." The father of the Rev. John Lowell was Percival Lowell, a merchant, who came from Bristol, England, in 1639 and settled in Newbury, Mass. James Russell Lowell was thus of the fifth generation from one of the founders of New England. His brother, the Rev. R. T. S. Lowell, is also an author, as is his sister, Mrs. S. R. Putnam; and among his kinsmen, not through direct descent, have been John Lowell, the prolific pamphleteer of Madison's Administration; Francis Cabot Lowell, the founder of the cotton manufactures of New England; John Lowell, the founder of the Lowell Institute in Boston; the present Judge (John) Lowell; and the younger authors, Percival, Abbott Lawrence, and Edward Jackson Lowell. Two of James Russell Lowell's brother's children, Gen. Charles Russell Lowell and Lieut. James Jackson Lowell, were killed during the civil war. It is doubtful whether any family name in New England represents so large a total of conspicuous usefulness.

Prof. Lowell's mother, Harriet (Spence) Lowell, was the daughter of Robert Traill Spence of Portsmouth, N. H., an officer of the United States Navy. She is described by those who knew her as affording the greatest contrast to her gentle and dignified husband, she having a strain of Celtic blood which gave her great vivacity, wit, and impetuosity of manner, all combining to make her very attractive. She lost her intellectual powers with advancing years, and was the subject, under those circumstances, of one of the most powerful and pathetic of her son's poems—"The Darkened Mind."

The house in which Lowell was born was one of several fine old mansions on Brattle Street (Cambridge)—a street bearing the name of a prominent Loyalist of the Revolution—known in the last generation as "Tory Row." The Baroness Riedesel in her Me-

moirs has described these houses as they were during the Restoration, when occupied by a series of families all connected, all rich and prosperous, and all upon the Tory side. Elmwood was built in 1767 by Lieut.-Gen. Thomas Oliver, and was the scene of a popular outbreak in 1774, when the occupant was compelled by a mob to decline office as Mandamus Counsellor in these pithy terms: "My house at Cambridge being surrounded by about 4,000 people, in compliance with their command I sign my name, Thomas Oliver." The house was afterwards occupied by Gov. Elbridge Gerry, from whom the Rev. Dr. Lowell purchased it. The beautiful trees which now adorn it were mostly planted by him. Nearly opposite, across Brattle Street, in another of those large colonial houses, was kept for many years the classical school of William Wells, who then had the reputation of fitting boys better than any one else for Harvard College. This was probably true, but it was nevertheless a rough, old-fashioned school of the English type, upon which none of its boarding pupils look back with much pleasure. Lowell, however, was a day scholar, as was his lifelong friend and fellow-worker, William Story; and among the younger pupils who afterwards developed literary tastes were T. W. Higginson and Charles C. Perkins. The training was mainly classical, Mr. Wells being himself the author of an excellent Latin grammar and editor of the first American edition of Cicero.

From this school Lowell entered Harvard College in 1834, taking his degree of A.B. in 1838, and that of A.M. in 1841. He was a college classmate of his friend Story, of Hon. Charles Devens (of Boston), Hon. Rufus King (of Cincinnati), Dr. G. B. Loring (our recent Minister to Portugal), Gen. H. L. Eustis, the Rev. Drs. E. A. Washburn, Rufus Ellis, and J. I. T. Coolidge. Socially, he was one of the favorites of his class and one of the editors of the College periodical, *Harvardiana;* but he was rather irregular as a student, and was suspended on the eve of graduation for a boyish escapade. This prevented the delivery of his class poem, but it was subsequently published without his name, and partly for this reason has now become so rare that copies of it command a high price. It contains some boyish satire upon the abolitionists and other reformers, but showed the nascent spirit of reform in an eloquent protest against the eviction of the Cherokees, and also in a tribute to the Rev. Dr. Channing. He never reprinted it among his works, but it is very probable that its publication did something to commit him to the career of letters.

A far more powerful influence was, however, brought to bear upon him, in the same direction, soon after. A young poet's love is always a prime factor in his career, but rarely one so altogether controlling as in the case of Lowell. The object of his attachment was Maria White, the sister of one of his classmates. She lived in Watertown, the town adjoining Cambridge, where her father was perhaps the most influential citizen; she had a good deal of beauty, and this of a thoughtful and poetic type, and, under a peculiarly serene and gentle aspect, concealed great strength and fervor of nature. Lowell was, as he has since said of himself, by "temperament and education of a conservative tone." She was, on the other hand, a natural reformer, and, though partly educated in a convent, had already thrown herself with ardent sympathy into the reformatory spirit of the times, and especially the anti-slavery movement; she had also attended Margaret Fuller's classes. That this reformatory spirit was with her a matter of temperament as well as conviction—something in the blood—is indicated by the fact that her brother, only a few years older, gave up all for reform, travelled about the country with Frederick Douglass and others as an anti-slavery apostle, and afterwards gave equal energy to the temperance agitation.

All this reformatory atmosphere determined Lowell's career: his love made him a poet, the object of his love made him a reformer. The same end might have been reached in other ways, but this was the way in which it actually came. For the rest, he and his betrothed became the centre of a circle of very clever and joyous young people, who had several pleasant headquarters in Boston, Cambridge, and Watertown, and who all accepted these two lovers as their natural leaders, or, as the phrase among them was, their "king and queen." Lowell was then studying law, or just essaying his powers in that direction; he could not yet afford to be married, and it was understood that the prospective father-in-law withheld his consent until Pegasus should have learned to work in harness, thus giving the needed flavor of opposition. Meanwhile, the love affair interested the whole circle. It was a composite romance; there was, moreover, a theory of publicity about it—it was too sacred *not* to be spoken of—and the love-letters of the young people were shown freely from hand to hand. Perhaps it was all a little exaggerated, but it was pretty and innocent, and the real genius and earnest purposes of the parties gave it a certain dignity. They meant to lead a life as ideal as that of Dante and Beatrice, and, incidentally, to reform the world.

Lowell's first volume, 'A Year's Life' (1841), shows primarily the influence of Maria White, and secondarily that of Keats and Tennyson; he and his betrothed being among the first readers of the two thin volumes which then imperfectly predicted the well-earned fame of the present Laureate. As the first work of a youth of twenty-one, 'A Year's Life' had doubtless much that was crude and imitative, but it struck a note then new in our literature, and found at once a circle of warm admirers who did not hesitate, with youthful daring, to claim that the most gifted of American poets had appeared. Margaret Fuller, who later criticised him in a more trenchant way, said acutely of the work that its best encomium was to be found in the perhaps exaggerated admiration of these young people; and Lowell has since been his own severest critic by omitting most of it from his published works. Perhaps he has done this too rigidly, but it nevertheless remains in literature as a beautiful example of shaping influence from a pure and devoted love.

Its reception, at any rate, weakened his hold upon the law, his brief experience in which is best recorded in a paper by him entitled "The First Client," and published in the Boston *Miscellany*. This periodical was an outgrowth of the "Brothers and Sisters," as the coterie of young friends called themselves, it being edited by Nathan Hale, one of the leaders of the group, and he being aided by the contributions of Lowell and Story. The two volumes edited by Hale (1842–3) are still worth inspection as a landmark in American literature, exhibiting the first step out of the *Godey's Lady's Book* period towards the magazine of to-day. The fashion-plate was still retained, the type was dingy, the criticisms were conventional, but a step was taken. Lowell himself attempted a still further step in the *Pioneer*, a magazine which he essayed to conduct, in 1843, after Hale had surrendered the *Miscellany*.

The *Pioneer* took at once a higher stand than any previous American magazine. The element of costume was now wholly disregarded, and there were substituted "outlines" from Flaxman, as being better than "a host of tawdry fashion plates." The editors secured the best corps of purely literary contributors to be had in the country—Hawthorne, Poe, John Neal, T. W. Parsons; Elizabeth Barrett sent one poem; Maria White printed two really noble and beautiful sonnets, addressed to her betrothed, but without her name; while Lowell and Story wrote profusely under various names. Whether it was too good to live is now uncertain, but it died after its third number, leaving, however, a promise which gave great encouragement to the later *Putnam's Magazine* and the final *Atlantic Monthly*. After all, the absence of capital may have been the simpler key to its fate. Lowell could have commanded very little, in those days, of this essential requisite, while his associate, Robert Carter, had less. But Lowell's poems were in demand in a moderate way; indeed, it was considered quite a triumph of the muse when he was offered $100 for ten poems to appear in *Graham's Magazine*. The same periodical contained a very eulogistic paper on the new poet, signed "P.," and generally attributed to Poe, but really the work of the late Charles J. Peterson of Philadelphia.

The following year Lowell was married and entered on a wedded life which fortunately did not disappoint its early promise. He and his young wife took up their abode at Elmwood with the Rev. Dr. Lowell; and Fredrika Bremer remarked, on her visit to this country, that it was the only house she had entered where two successive generations had been born. Two children were there given to them, of whom the elder, Blanche, died young, only the younger surviving—now Mrs. Edward Burnett, who still resides with her children at Elmwood.

Lowell's volume called 'Poems' (1844) showed a maturer development of his powers, although, as often happens with young authors, the long poem, "A Legend of Brittany," was one of its least successful portions. More significant was the sonnet to Wendell Phillips, in which he distinctly took sides with the abolitionists, thus predicting the current of many of his coming years. The sonnet on the opposite page, "In Absence," was by Maria Lowell. Next followed the 'Vision of Sir Launfal' (1845), and in a few years his first prose work, 'Conversations on Some of the Old Poets' (1848), his wife contributing to this also, in the form of a graceful illuminated cover which she designed. This volume was based on his papers on the English dramatists in the *Boston Miscellany*. He chose for his book that conversational form which Landor had then made popular, but not permanent; there is very little of dramatic variation in Lowell's two interlocutors, and the form really added nothing. The style was, moreover, somewhat crude, and had a certain cumbrousness from which he did not free himself for many years; but the book was a work of love, represented a great deal of reading, and showed the author's wonted taste in selections and citations. In his preface he makes an apology for the defects of the book, on the ground of haste, but makes no apology for the haste itself, and alludes, rather defiantly, to that introduction of his anti-slavery opinions which was by no

means to his discredit. Another volume, entitled 'Poems: Second Series,' followed in 1848, containing a touching poem by his wife, "The Morning Glory." It included also his ringing verses entitled "The Present Crisis," which had been first published anonymously in the Boston *Courier*, and had attracted more attention, perhaps, than anything he had written, being at first attributed to Whittier. Lowell had now, for some time, been established, in Willis's phrase, as "the best-launched poet of his time."

He had by this date thrown in his lot with the abolitionists, was a vice-president of anti-slavery societies, a corresponding editor of the *Anti-Slavery Standard* (1848), and a frequent attendant at conventions, although he never spoke. Moreover, he had begun in 1846 to write for the Boston *Courier*, under the name of Homer Wilbur, those satirical verses which were to give him perhaps his greatest fame. Such was his personal reputation for wit that no one was surprised at his writing them, but his best friends were hardly prepared for the extraordinary combination of talent which appeared in the collected volume of 'Biglow Papers' (1848)—the learning, the allusion, the Cotton-Mather quality of the whole setting of the book, alloyed only here and there by a visible touch of Carlylism, then so prevalent. Twenty years after, in returning a second time to the 'Papers,' he wrote in his preface a full explanation of the circumstances under which the original book was written.

During the same year appeared his other work of humorous genius, 'The Fable for Critics' (1848). This was begun as a mere squib, to amuse a friend in New York, but grew upon his hands, and was published anonymously, yet with little attempt at concealment. It had an immediate success, and had many brilliant and many graceful passages. It cannot be fully estimated, however, without remembering that it was written at a period more trenchant than now — the Poe period — when literary personalities were still in order, and when it was considered becoming in literature, as now in politics, to "get even" with an opponent, as did Lowell in this case with Margaret Fuller and with Professor Bowen of Harvard University. Having become an associate of the latter in the University, he modified that part of the poem, and it was hoped by some of his friends that he would also modify that in regard to Miss Fuller, whose heroic Italian life and tragic death had meanwhile disarmed personal criticism; but he never did.

In 1851 he visited Europe with his wife, whose health, never strong, became more and more delicate until her death, October 27, 1853, formed another era in his life. It seemed to produce almost a reaction against former scenes and companionships, now painful through bitter association with her; and although he allowed his name to stand in connection with anti-slavery societies, he was generally regarded as having cooled in sympathy. This was unjustly attributed to his becoming, in 1855, a professor in Harvard University, then rightly regarded as very conservative. He visited Europe again, wrote in *Putnam's Magazine*, and became, in 1857, the joint editor of the *Atlantic Monthly*. In this capacity he showed much acumen and ability, with some want of method and systematic industry. Later (1863–1872) he was editor of the *North American Review*, with his life-long friend Norton as co-editor. Soon after his wife's death his brief 'Life of Keats' was published (1854), prefixed to a new edition of that poet; this was, however, probably written earlier, and for nearly ten years after her death he printed nothing important. Even then his 'Fireside Travels' (1864) was almost wholly a reprint of papers written long before, and seemed hardly enough of a harvest to justify so long a fallow period, although it contained the delightful and semi-autobiographical "Cambridge Thirty Years Ago."

In 1855 Mr. Lowell was appointed to the Harvard professorship vacated by his friend Longfellow, his title being that of "Smith Professor of the French and Spanish Languages and Literatures and Professor of Belles-Lettres." In this capacity he gave lectures and had classes; but there was a certain constitutional indolence about him which made academic life not altogether attractive; his pupils sometimes complained that he came into the recitation-room yawning, and their parents that he put a little cynicism into his interpretations of the great historic legends—such as may be seen, for instance, in his poem of "Blondel." He was always personally popular, however, and reflected distinction on the University by his character and attainments. In 1857 he married his second wife, Miss Frances Dunlap, of Portland, Maine, an accomplished and agreeable woman, who had been his daughter's governess. To this marriage no children were born.

Meantime the storm of the Civil War had begun to gather over the land; three of Lowell's nephews—Gen. C. R. Lowell, Lieut. J. J. Lowell, and Lieut. J. J. Putnam—fell in the struggle, and it seemed to give a new impulse to his productiveness. The second series of the 'Biglow Papers' followed (1865), and his magnificent "Ode" was recited at the Harvard commemoration services, July 21, 1865, taking rank at once as the one great poem of the Civil War. A period of new activity followed; there succeeded in quick succession 'Under the Willows, and Other Poems' (1869), 'The Cathedral' (1870), 'Among My Books' (1870, second series, 1876), 'My Study Windows' (1871), and 'Three Memorial Poems' (1876). He was a Presidential elector in this last year, and in the following was appointed by President Hayes (of whose Cabinet his classmate, Gen. Devens, was a member) as United States Minister to Spain. This was the beginning of his diplomatic career.

The Spanish mission had been by tradition, since the days of Irving, a literary distinction rather than a public function. Mr. Lowell found the social duties very agreeable. Without the training of a diplomat, he had many of the essential qualities—cultivation, *bonhomie*, patience, and a ready wit. Even a certain indolence of nature stood him in stead, since a large part of diplomatic duty consists in waiting. On his transfer to the Court of St. James's, he found some duties more complex awaiting him, in the settlement of various questions relating to Irish-American "suspects"; and he encountered some criticisms at home which now seem to have been unreasonable. His social accomplishments made him exceedingly popular in London, and if this popularity seemed to lie rather in the direction of the conservative than of the more progressive English sentiment, this proceeded evidently from circumstances, and not—as was at one time widely reported—from a want of proper American feeling. Any doubts on this subject were at once removed, in all reasonable minds, by his remarkable address on "Democracy," delivered (October 6, 1884) at Birmingham, England, on assuming the Presidency of the Birmingham and Midland Institute. A more admirable statement has never been made of the working, not merely of guarded republican institutions, but of the principle of democracy itself up to the present day, and it will go permanently on record as a broad statement of the very spirit of the age by one of its finest minds.

It was published in a volume, 'Democracy, and Other Addresses' (1885). This contains a variety of admirable addresses, mostly literary, and all delivered in England, except the address at Chelsea, Mass., and that pronounced (November 8, 1886) at the 250th anniversary of the founding of Harvard University. The whole volume shows a very distinct literary advance above all his previous work; there is a mellowness of tone and a judicial quality which were not always visible in his earlier critical writings. The style is terser, and wholly disarms some of the criticisms which had been earlier made upon him, not wholly without reason, for too great accumulation of metaphor and too great prolixity in the structure of his sentences. These defects, all growing in reality from an excess of wealth, were keenly pointed out long since by Prof. W. C. Wilkinson in 'A Free Lance in the Field of Life and Letters,' and by John Foster Kirk in *Lippincott's Magazine;* but their objections certainly do not hold against this his crowning volume.

The second Mrs. Lowell died in London, after a long illness, in February, 1885. His diplomatic life closed in 1885, not abruptly, like Motley's, but with his full consent, and in the most cordial relations with his successor, Mr. E. J. Phelps, for whom Lowell predicted at the outset that successful career which followed. Returning home, Lowell resumed, in a slight way, his connection with the University, being, however, transferred soon after to an "emeritus" position. He delivered lectures before the Lowell Institute on the old English dramatists, and gave various public addresses. For a time he resided with his daughter in Southborough, Mass., but in 1889 returned with her and her children, after prolonged absence, to his birthplace, and occupied himself during a period of broken health in a Life of his old friend Hawthorne, for the "American Men o Letters" Series.

It is too early to anticipate the judgment of posterity on Lowell's position in literature. All will now admit him to have been th author of the finest single poem yet produced in this country, the "Commemoration Ode"; to have reached in his 'Biglow Papers' the high-water mark of American humor; to have been unquestionably, despite all necessary allowances, our foremost critic; and to have done more, probably, than any man to command for our institutions, in all their aspects, the respect of the English-speaking world. His fame was not, like that of his friend Longfellow—or even like that of Cooper, Mrs. Stowe, and Bret Harte—international; few of his writings, if any, were translated into other languages than his own. But this is, after all, a very uncertain test of merit; and it is probable that no American author, unless it be Emerson, has achieved a securer hold upon a lasting fame. In his political aspect, nothing can be more certain than that his reputation will grow with time, and that, to say nothing of the vigor and originality of his thought, his independence, which of late years brought down upon him a shower of partisan abuse hardly to be matched in any country, or in any age, for indecency, will be rated among his crowning glories.

SWITZERLAND, 1291-1891.

BERN, July 30, 1891.

THE Swiss Republic is at the present moment in the fever heat of celebration. On the 1st of August the Confederation commemorates the six hundredth anniversary of its birth; on the 15th, the city of Bern the seven hundredth recurrence of its foundation day. For both of these occasions elaborate preparations have been made, for Bern will celebrate no less magnificently than the Union, which it may, perhaps, surpass in artistic effects. Hence, there is much busy excitement and anticipation, much preparation for strange visitors, and some patriotic reflections.

In the midst of all this, and in the summer season, one might suppose that politics would drop out of sight, and the subject of constitutional reform be left to rest till cold weather. But in this very centennial year, and almost in connection with the celebrations themselves, several constitutional changes have taken place which strongly emphasize the historical reflections which the time and season have already called forth. The Republic has taken the most advanced step towards democracy upon which it has ever ventured, namely, the application of the Initiative, or what may be better called the Imperative Petition, to Federal laws. The institution of the Referendum, or the submission of laws just enacted to popular vote when demanded by 30,000 citizens, was already in existence; but the power to demand that a given project be made law has just this month been assumed by the people. On Sunday, July 7, the necessary constitutional amendment was voted upon in a general election and passed. The vote was very light, but the majority in favor of the law quite decisive. A special session of the Federal Assembly was called for July 27, and yesterday the law which sets the Initiative in operation passed the lower house.

The contrast between the Confederation of 1291 and that of 1891 in the matter of central government could hardly have been more strikingly emphasized. In the former there was the merest figment of a Federal Administration, for rules of common action among the States were but just sufficient to keep peace among themselves and the enemy from the door. Even three hundred years ago, when the semblance of central government had been made much greater by regular diets and the appointment of certain standing officials, there was little in the Confederation beyond the power to recommend law to the cantons, and the latter might do as they pleased about agreeing to the suggestion or even about obeying what the majority agreed to. In fact, it is within the last half century that the real Federal Government has grown up, for before the Constitution of 1848 there was only the shadow of it.

Viewed from one standpoint, this new law is a return to the original state of things, for then everything was purely democratic. Laws, wars, or expeditions were submitted to the assembled folk for approval, and according to their vote only could matters be undertaken. But in those days, and even almost to our own day, the State was everything in the mind of the citizen, and the Confederation as little as possible. The placing of the enactment of law more completely in the hands of the people, while it seems in some sense a degradation of the legislator, or of those whose duty it is to suggest measures, is, nevertheless, at this juncture, an additional bulwark for central government, for the people as a whole are to vote for what interests the whole Confederation, and the voter widens his sympathies every time he exercises such a right. As patriotism is not wanting here, so neither is sectionalism and jealousy of central government; hence a measure which makes the State as a whole stronger may be viewed with toleration.

The substance of the new law is to the effect that when 50,000 voters petition for an amendment to the Constitution, or for the adoption of a statute, the Federal Assembly *must* submit the requested proposition within a given time to popular vote. The Government may at the same time present a project of its own for choice, but in any case there can be no avoidance of the duty of giving the people a chance to say whether they want such a law or not. If a majority of all votes cast, and at the same time a majority of all the States, are in favor of it, the proposition becomes law.

The effect is to take out of the hands of the Federal Legislature the power to delay or postpone the consideration of a law which public sentiment seems to demand. For example, if fifty thousand citizens had demanded the passage of an International Copyright Law, Congress could not have postponed the matter for year after year, but must have formulated a law within six months and then submitted it to the approval of the people. Yet this is only a passive instrument for the introduction of law. It still remains to be seen what use will be made of it, or whether it will be used at all. The Initiative has been in existence in a number of the State constitutions for a considerable time, but has been very little employed. Switzerland has long been acquainted with the theory of the subject, but has used the machinery hardly enough to learn the effect. Some are fearful that radical reformers will spring unripe legislation on the country—for instance, the election of the Cabinet by the people—and will get enough votes to carry it through. There is a little trembling before the labor vote, but all is in the uncertain future, and it will not do to prophesy as yet.

Another matter of political importance, also to be charged to this month of July, was the trial of the Ticino revolutionists. It will be remembered that last October and November the Liberal party in Ticino became tired of waiting for a change of government by regular means, planned a *coup d'état*, and thrust out the Conservative administration by force of arms. The Federal Government was obliged to interfere, restored the previous administration, and indicted a number of the leaders of the insurrection. The trial took place in Zürich, as it was thought that a German jury would be more cool-blooded than one in Ticino or in a Romance canton. Great interest was felt all over Switzerland in the examination of the witnesses, for they represented the ultra-Conservative element in general politics as well as in Ticino. The defence was, that the party in power had got into office and maintained itself there by all sorts of corruption, and had driven the Opposition to desperation; that appeals to the Federal Assembly and the Federal courts had been delayed for years, and that total subordination to bossism and priestcraft was the only alternative. This was the drift of the cross-examination and of the arguments for the defence, and, much to the surprise of everybody, the jury brought in a verdict of acquittal. There was universal sympathy with the revolutionists among Liberals of other States, but the expectation was that they would be found guilty and then pardoned, or only nominally punished. The effect of the verdict is to put a premium on revolution and to injure regular modes of party government—a proceeding which stands quite out of line with the steady legal theories and practice of Switzerland. The Conservative papers set up a perfect howl of objurgation, and prophesied everything evil. The better class of Liberal journals were also surprised and shocked, but did not think the precedent would be followed. The judges of the court in fact rebuked the action of the jury by condemning the man Castione, who was accused of killing a member of the Government in the mêlée, to eight years' servitude with a heavy fine. Castione was *contumax*, and therefore will not serve till caught, but the sentence was for treason and insurrection, in direct contradiction to the verdict of the jury.

I have been much interested in the operations of the Federal Assembly in its sittings of the past few days. I came purposely some distance to take advantage of the extra session, and felt amply repaid in the opportunity it gave for comparison again with our American procedure. The occasion was particularly favorable because the Assembly felt that there was little to do, and one could in a short time follow the whole public history of a measure. The session had been ordered out of the regular time, but the lower house at the outset declared that it was only a continuance, and re-elected the chairman and remaining organization of the previous session. The Senate differed as to the definition, but elected the same organization by ballot. Both houses also agreed to consider other matters than the one named in the call. The bill concerning the introduction of the Initiative was the project of the Federal Cabinet, and had already been for a few days in the hands of a committee of the House, for a favorable vote on the amendment had been anticipated and a contingent committee appointed. According to the usual practice, the Presidents of the Houses had also met beforehand and agreed as to which branch should first consider the bill. It was decided that the House of Representatives should begin the discussion. I have used the term "lower house" in this letter out of regard for American analogies; but that is hardly the proper term here. It is rather strange to an American to find on the general order of the day that the Nationalrath stands at the top and the Ständerath (or Senate) takes second place; but that is really the order of their importance in the public mind.

The sitting opened on Monday afternoon at three o'clock. The most distant member might have left his home the same morning, and reached Bern in time for the roll-call. After the preliminaries of organization, and a few words from the chairman in memory of a deceased Senator, the report of the committee on the Initiative Bill was called for. There were in reality two chairmen of this committee, one to represent the German, the other the French members of the House. Whenever any official statement was made, or explanation of a clause given, the report in German was followed by a statement from the French chairman; so, also, in the case of all announcements by the Speaker of the House and in the reading of motions, there was a double presentation. The discussion of the bill was not particularly animated. No great principle was at stake, for that had been settled in the Constitutional amendment. It was only a question of detail, and though opinions varied a good deal, an agreement was reached with comparative ease. The committee varied somewhat from the project of the Federal Council, and now and then the member of the Cabinet who had the matter in charge rose to explain and

give his opinion. The House, however, generally sustained the committee. Under the favorable conditions of the subject, the bill was taken up, debated, amended, and passed by a large majority, with apparent moderation, in two sessions on Tuesday. J. M. VINCENT.

P. S., July 31.—The Senate has decided, quite unexpectedly, to postpone the consideration of the Initiative question until the December session. So the purpose for which the extraordinary assembly was called, has been defeated; but it is only a question of a few months before the introduction of the law will be accomplished substantially as passed by the Nationalrath.

Correspondence.

THE JEWISH QUESTION.

TO THE EDITOR OF THE NATION:

SIR: If your correspondent "L. N. D." did not think it likely that I had been "hired with Russian rubles" to write my article on the Jewish question in the *North American Review*, he might perhaps as well have refrained from repeating that suggestion. His own hypothesis is, that I "am simply filled with hatred against those whom I think too weak to resist oppression, whether they be Irish rack-rented tenants or Jewish artisans and students in Russia." He may very well be ignorant of my history, and not know that I pleaded to the best of my power the cause of the slave against the slave-owner, of the black peasantry of Jamaica against the tyranny of the whites, of the aborigines in the British colonies against colonial inhumanity, of the Ionian Islanders against imperial aggrandizement, and of the Hindus, after the Sepoy mutiny, against imperial vengeance. More than once I have run a social gauntlet in doing the very reverse of that which your correspondent assumes it is my propensity to do.

As to "the Irish rack-rented tenants," it happens that I was the first, I believe, to present their case in its historical aspect; at all events, I so presented it as to win the approval and friendship of leading Irish patriots in that day. Like John Bright, I was opposed to home rule because, like him, I thought that it meant separation, civil war, and a renewal of the calamities of the past. Like him, also, I have always believed that the malady of Ireland was economical, not political, and that the remedy must be economical also. Events surely have so far justified our course that my motives need not be taken to have been vile.

There appears to be reason to believe that peasants in Russia and other countries where Jewish usury has prevailed, have suffered at the hands of the usurer not less than the rack-rented tenant of Ireland suffered at the hands of his landlord. I do not justify or excuse the deplorable violence of the revolt, but I submit that a revolt was the almost inevitable consequence of the unhappy relations into which the two nationalities had been brought. I think it is clearly proved that the origin of the outbreaks was not religious, as has been generally supposed, but economical and social. I think these facts, if they are facts, ought to be recognized, because otherwise the true solution of this desperate problem cannot be found. Nor do I see why Russian men and women should be allowed to rest under the imputation of hideous and fiendish atrocities when impartial evidence can be adduced to show that the imputation is unfounded.

About the present policy of the Russian Government I have said nothing, because I do not know, nor does any one seem to know, exactly what it is. Mr. Arnold White has been sent by the friends of the Jews to inquire, and the Russian Government seems to oppose no obstacles to his investigations. There was a letter from him the other day in the London *Times*, in which he said that a gang of men who were being led through the street in chains had been pointed out to him as persecuted Jews, but he had afterwards learned that they were convicts. The Czar is called by "L. N. D." a "Nero," but he once had liberal tendencies. It is too likely, however, that he has been goaded to measures of violence by that constant dread of assassination which so few men's nerves or characters withstand. If he has, this seems to be another reason for giving up murder and murder clubs as instruments of political reform. Nobody believes that Russia is ripe for popular government, even if the whole imperial family could be destroyed.

To speak of the Jews collectively as "the weak" is a great mistake. They are not weak, but formidably strong. They are lords of money in a world which bows to it; in a world largely governed by journalism, they have a great and increasing influence over the press. There is a general dread of their power and their resentment. In granting insertion to an independent article on this question, the editor of the *North American Review* has given no ordinary proof of his own independence.

Yours faithfully, GOLDWIN SMITH.

P. S.—Let me take the opportunity of mentioning that the title of the article in the *North American*, "New Light on the Jewish Question," is not, as some critics assume, the author's, but editorial.

THE OLIPHANTS AND HARRIS.

TO THE EDITOR OF THE NATION:

SIR: Not having read the Life of Laurence Oliphant reviewed in the *Nation* of the 9th of July, I do not know how much of the conclusions in the review belong to the book and how much to the reviewer; but as I knew both Oliphant and his wife (the latter, indeed, being a distant relative of our family), and as I had talked with them at a period long after their abandonment of the community of Harris, *i. e.*, when they were in Athens after a stay in the East, I can state their contradictions of the popular traditions even then current as to their relations with Harris. I asked Laurence particularly about the story of his having been warned by what you term "a strange superstition," which is an allusion to the story of his having refused to return to America during the siege of Paris at the call of Harris, and having been warned by a discharge of musketry through his window, on which he left at once, considering it a warning from Providence, etc., and he assured me that the whole story was pure fiction, no such incident having ever taken place, no shot having ever been fired through his window, and the call of Harris to America being simply a statement that the business affairs of the community were in need of attention, and, as Harris had no business capacity, it was necessary that he, the only member of the community conversant with them, should be on the spot for the purpose. He declared the compulsion attributed to Harris over the acts of the members of his flock to be purely imaginary, other than that he taught that, to conquer the worldly propensities of human nature, it was necessary to do the things most unpleasing to one's natural tendencies.

He said, in words which struck me then as the expression of his inmost feeling, "They considered me mad because I had determined to sacrifice the world to God," adding that the real madness was in the contrary course. And Alice assured me in the most positive manner that there was no truth whatever in the story that Harris had ever had possession of her dowry, but that she had invested it and had then (*i. e.*, when we were together at Athens, I think, in 1882) the entire capital and the profits of the investment. She, too, denied in the most energetic manner the reported tyrannical interference of Harris in the conduct of the disciples; she herself chose the hard life she entered into at intervals as a means of conquering her self-indulgence, and she declared that these acts of discipline were in all cases voluntary and not enjoined by Harris, who was in an almost complete seclusion, ill, and sometimes not seen by them for a fortnight, devoted to meditation, and rarely interfering with the acts of his disciples. Her visit to California in particular she declared to me to be her own impulse, and in one case she undertook the work of a washerwoman with the same purpose. The expressions of their feelings as to the character of Harris in all that either of them said in our long conversations on the subject, were affectionate, respectful, and inconsistent with the assumption that he was either an impostor or a tyrant, or that the restraints he inculcated, rather than imposed, were anything more than the voluntary putting in practice of what he taught as to the necessity of subduing all the human tendencies to worldliness and self-indulgence; and this Alice repeatedly asserted and Laurence confirmed.

After her death Oliphant became utterly absorbed in the spiritual (as he believed it) intercourse with Alice in her new state; and as all know who have at any length studied this class of phenomena, absorption in the so-called spiritual intercourse leads rapidly to a more or less complete insanity. What may have been Laurence's conclusions in this state, or his opinions of Harris and his doctrines, I cannot conjecture; but when I saw and talked with him and Alice, he was in the perfect enjoyment of his reasoning powers and of the present life, and the testimony of both was directly contradictory of the conclusions of the review in the *Nation*, and, if those are also those of the book, of the book itself.

Yours truly, W. J. STILLMAN.

PIEVE DI CADORE, July 29, 1891.

BOND OF UNION IN THE EPISCOPAL CHURCH.

TO THE EDITOR OF THE NATION:

SIR: I cannot but think you have been doing the community a service in calling its attention to the existence of such a thing as intellectual honesty and to the need of it. To many persons it is as much a surprise to discover that "I believe" implies a direct intellectual process, as it is to discover a distinction between "I think" and "I know." It is a testimony to the higher standard of intellectual honesty demanded by our time, that the question what constitutes unity of belief with others is, so far as I am aware, a modern one. The demand for positiveness and activity in a belief has gone a long way since compulsory baptism by thousands in a river was regarded by the ecclesiastics of Charlemagne's time as sufficient conversion for the Saxons. To insist that the believer shall ask himself wherein lies his bond of unity with the past, is decidedly doing him a service.

But I cannot but think, too, that you, with

many others, miss the point when you make this unity with the past consist chiefly in assent to the result of an intellectual process. To many, a creed is like a business contract, where the terms have one definite meaning, clearly understood by all parties, and where, if any party attempts to vary the meaning, he may properly be arrested for breach of agreement. Any one who should allege in excuse for non-fulfilment of a business contract that by dollars he did not mean dollars but dimes, would be sent out of court with damages and derision. Now, is a creed a contract of this nature? The fundamental condition of a contract is wanting in the case of a creed. The terms have not one definite meaning, but meanings which differ in every age, and this difference cannot be prevented. The attempts of ecclesiastical councils to keep definitions the same, form one of the melancholy chapters of Church history. The term "God" must have a different meaning to every different person. If it is an intellectual result that is to constitute unity among believers, if it is having the same ideas, unity is impossible. And much of the upheaval going on in the various churches to-day arises from the fact that the machinery of a church is framed to secure the holding of the same ideas in common, which is now seen to be impossible, while yet unity is becoming daily more of a fact and more evident. We are puzzled by our success, for we have more unity than our machinery can handle.

I have nothing to say as to the way in which other churches should meet this difficulty, but it seems to me that the Episcopal Church, to which I belong, which has been supposed to be in this respect an especial offender, has in reality guarded herself from misconception on this point. She is supposed to be guilty partly because she retains in her Prayer-Book the Thirty-nine Articles, while it is acknowledged that these do not represent the theological belief of many of her members. But in reality these Articles have no confessional value whatever in the Protestant Episcopal Church in the United States. They have never been adopted by that Church as an authoritative standard, as they are in the Church of England. They were placed in the American Prayer-Book as a compromise, with no statement of their legal position. Perhaps it is not wise to have on your premises a door-plate bearing the name of a former occupant; at all events, wise or not, when messages come to you intended for him, you are justified in sending them back.

Now, the Episcopal Church has herself officially declared how it is that she desires her members to hold their faith in common. It is not the having of the same ideas that she aims at. She regards it as a secondary matter whether her members hold their faith in the unity of intellectual apprehension or not. But she bids them all (Morning Prayer: Collect for All Conditions of Men) pray that they may "hold the faith in unity of spirit, in the bond of peace, and in righteousness of life." That is, the unity she seeks to foster among them is not an intellectual, but a spiritual unity, one of common aims rather than common apprehensions. Common apprehensions are indeed desirable for any intimacy of relationship and for work in common. Regarded as secondary, they constitute a rightful ground for the differences among the various churches and among members of the same church. But the bond of unity is primarily spiritual, that is, one in which stress is laid on the nature of the issues and aim rather than on the thought underlying them.

If it were generally understood that the bond binding Christians to the past and to one another is community of aim rather than identity of organization, ritual, or belief, valuable as these are in a secondary way, not only would many misapprehensions be avoided, but a larger unity would result than is possible with the view of a creed as a commercial contract. FREDERIC PALMER.

ANDOVER, MASS., August 6, 1891.

EVASIONS OF THE CONSTITUTION.

TO THE EDITOR OF THE NATION:

SIR: There is an art, not ranking yet among the fine arts or the familiar arts of industry, which consists in defeating the Constitution without coming into direct collision with its provisions. Adepts in this art have flourished in the State of New York for many years, and in 1877 had carried their skill to such perfection as to elicit the remark from our highest court that "there may be ways for a Legislature to circumvent a constitutional provision without violating it."

One of these ways of circumvention is so to draft an act, or provision of an act, as to make it appear to be general, though it is, to all intents and purposes, local. This artifice has been practised in order to evade those clauses of the State Constitution which ordain that the "Legislature shall not pass a *private or local bill*" for the purpose of granting to corporations any exclusive privilege or franchise; and that "no *private or local bill* which may be passed by the Legislature shall embrace more than one subject, and that shall be expressed in the title." As those clauses of the organic law do not apply to general acts, the ingenuity of the legislative expert is exercised in presenting, with general features, an act which is particular in its purpose and must be local in its application. For example, the 36th section of the Rapid-Transit Act of 1875 was general in its form, because made applicable in general terms to "*any* elevated steam railway now in actual operation"; but, in fact, it was local because it could apply, and was intended to apply, only to the New York Elevated Road, that being the only elevated road at the time in "actual operation." The section conferred an exclusive privilege, and would have been unconstitutional if it had specified a particular corporation as the sole grantee of the privilege.

This legislative finesse in converting local into general laws is also exhibited in so classifying the cities of the State according to population that a particular city may alone constitute a class, and then legislating generally in relation to the class. Take, for example, the laws regulating the price of gas. The act of 1887 restricting the price of gas in Brooklyn to $1.60 per thousand feet, and the act of June 5, 1890, restricting such price to $1.50, treated only of such restriction, and that single subject was fairly indicated by the titles of those acts, as required by the Constitution, so as to give a reasonable notice of what was going on in the Legislature to all concerned.

But on June 7, 1890, another statute was passed under the title of "An Act in relation to transportation corporations," and section 70 of this long and complicated statute of 163 sections restricts the price of gas to $1.25 per thousand feet "*in any city in this State having a population of 800,000 or over.*" It is certain that this section was not intended to apply, and will never apply, to any other than the cities of New York and Brooklyn. Even if it be supposable that Buffalo, the next largest city, will reach a population of 800,000 in the next century, no Legislature should be charged with the supreme folly of now attempting to regulate the price of gas in that city in 1990. But if the said section, though thus local in fact, had been made local in terms by naming New York and Brooklyn as the only cities in which the price of gas was thus restricted, it would have offended against one of the clauses of the Constitution before quoted, because such restriction, which is the subject of the section, is in no wise indicated in the title of the act in which it is concealed. Therefore, in order to evade the Constitution, the trick of city classification was resorted to, and New York and Brooklyn, instead of being designated by name, are merely described in general terms as "any city having a population of 800,000 or over."

To prohibit, as was done by the constitutional amendment of 1874, the creation of a monopoly by a private or local law is obviously of no avail, if local laws can at pleasure be changed into general by the skill of the draughtsman. Under such conditions, the only effect of that amendment of 1874 is to make unscrupulous corporations pay for the trick of evading it in addition to paying for the monopoly. A special charter in the innocent guise of a general law may well command an extra perquisite.

It will occur to the intelligent reader that evasions so simple and transparent must at once be detected by the courts. Detected they are, but not exposed. More than once it has been judicially announced that the Court of Appeals will not look beneath the face of a statute in order to find an *arrière pensée*; that if a law be general in its terms, general that court should declare it to be. In the old English jurisprudence statutes were called *constitutiones*, because deemed so deeply imbued with the spirit of the Constitution. Now, if there is any way to dodge the letter of the Constitution, the Legislature is not concerned about its spirit; and why should it be, when the courts declare that "the spirit of a constitution may be disregarded and yet its letter observed"?

If, as the great Marshall said, "the judicial power is coextensive with the legislative, and capable of deciding every judicial question which grows out of the Constitution and laws," then it was hardly becoming for the Court of Appeals to give a construction to the 36th section of the Rapid-Transit Act before mentioned which Judge Earl admitted "might leave the way open to great abuses of legislative power." Either that court should be able to afford some effective protection against such abuses, or the guardianship of the Constitution should not remain in its nerveless hands. Or perhaps the Constitution should be so amended as to require that court to pass upon the constitutionality of bills affecting substantial rights before they become laws.

Wherever we turn, we see it written and hear it declared that the Constitution, as "the voice of the people speaking in their sovereign capacity," is paramount to all other laws. Such expressions are idle verbiage, and the strongest mandate of the people's voice a mere *brutum fulmen*, if, through an excess of judicial courtesy towards the Legislature, such evasions as have here been noticed are to continue. But the rule just laid down by Judge Andrews, that the question whether a law be local or general "must be determined upon the special circumstances of each case," will check these evasions if firmly applied. On the one hand, in accordance with this rule, a law may be territorially local and yet really general,

because it aims to prevent or abate a public nuisance and danger. Such are the subway acts requiring electric wires to be placed beneath the surface in the city of New York; and such are the acts for the protection of New York harbor, because that protection is essential to the prosperity of the whole State. On the other hand, however general a law may be in its form and terms, it is local if its whole practical effect is confined to the price of a commodity in one or two cities. A restriction of the price of gas in Brooklyn benefits only the householders of that city; that special fact cannot be changed by smothering it with all the general terms in the English language, and that special fact makes the restriction local, according to Judge Andrews's rule and the plainest dictates of justice and good sense. There is no magic in city classification, no jugglery with the words *any* or *all*, that can make a part equal to the whole; and no more flagrant evasion of the Constitution was ever attempted than the subterfuge of concealing a local restriction of the price of gas in that general law of 1890, which, according to its title, relates only to transportation corporations. It is a climax in that art of legislation which has no place among the honest arts.

WM. E. BULLOCK.

BROOKLYN, August 6, 1891.

THE JUDICIARY AND POLITICS.

TO THE EDITOR OF THE NATION:

SIR: Here in Cincinnati an effort is being made on the part of the bar to select able men for judges. To this end some five hundred lawyers balloted for candidates and selected four names which they recommend to the people. It was hoped that the political parties in convention assembled would endorse this Lawyers' Judicial Ticket. The Republicans ignored it—in fact, failed to renominate a gentleman who has been on the bench during the past ten years and who has always been affiliated with that party. The cause assigned for his defeat is unique. Said the great Republican "Boss," "We had nothing against him; he only forgot to have some one in the convention to work for him." This answer alone is sufficient reason for making the judiciary appointive instead of elective. Of late we are having men nominated for judges because they will "catch" the soldier vote, the German vote, the farmer vote, etc.

The recent lawyers' movement has been criticised as an attempt to abridge the authority of the people and as an effort to create a "Lawyers' Trust." When such sentiments as these are abroad, it is well to turn to Chief-Justice Shaw's admirable farewell address to the Massachusetts bar, found in the appendix of 15 Gray's Reports, and read:

> "Above all, let us be careful how we disparage the wisdom of our fathers in providing for the appointment to judicial office, in fixing the tenure of office, and making judges as free, impartial, and independent as the lot of humanity will admit. Let no plausible or delusive hope of obtaining a larger liberty, let not the example of any other State, lead you in this matter to desert your own solid ground until cautious reason, or the well-tried experiment of others, shall have demonstrated the establishment of a judiciary wiser and more solid than our own."

MAX B. MAY.

CINCINNATI, August 6, 1891.

THE PATENT MONOPOLY.

TO THE EDITOR OF THE NATION:

SIR: The people of Keokuk have been favored with an electric street railway for about ten months, and, until about six weeks ago, had a feeling of supreme confidence in its capacity and efficiency as a public server. Since then, however, that confidence has been rudely shaken. A thunderstorm or two about the middle of June was the cause of the change. Lightning struck the trolley wire, ran into the power-house, despite the lightning arrester, and disabled all the armatures. Since then, let a thunder cloud appear, and the street-car service stops; and if you are down town, you either walk, hire a carriage, or wait until the elements expend themselves.

The management, on being interviewed, says there is a remedy for the inconvenience, but it cannot get it. The Thomson-Houston Electric Company have a lightning-arrester which will arrest lightning, but they refuse to sell it to a company not using their system, and its device is so well patented that no other device equally efficient can be made without infringing its rights. Our company uses the Sprague system, and therefore suffers from the boycott.

This state of affairs suggests a defect in the patent laws. While ordinarily a sense of justice supports the rule that no man should be compelled to sell his property, yet there would be no injustice in compelling the patentee of an article to sell such article to all who may desire it, if he sells it to one. He is granted a valuable monopoly by the Government, and in return therefor should be compelled to deal impartially with the general public.

W. J. ROBERTS.

KEOKUK, IOWA, August 3, 1891.

THE TARIFF ON IDEAS.

TO THE EDITOR OF THE NATION:

SIR: One Bagster's Bible and one 'Bohn's Classical Quotations' mailed to me from London, in two sealed packages, and invoiced to me at $2.60. Packages cut open at New York Custom-house, invoice raised to $3.60; packages rewrapped and mailed to Chicago Post-office, C. O. D., ninety cents duties.

I have preserved the mutilated packages as an object-lesson. ***

CHICAGO, August 7, 1891.

Notes.

HOUGHTON, MIFFLIN & CO. will issue in the autumn Mr. John Fiske's work on 'The Discovery and Spanish Conquest of America.'

Macmillan & Co. will shortly begin publication of a series of copyright novels by English and American authors at the uniform price of a dollar. 'The Witch of Prague,' by F. Marion Crawford, 'Blanche Lady Falaise,' by Mr. Shorthouse, 'Life's Handicap,' by R. Kipling, and 'David,' by Mrs. Humphry Ward, are some of the titles already announced.

Ginn & Co. are about to bring out 'The Story of Our Continent: A Reading Book in the Geography of North America,' by Prof. N. S. Shaler of Harvard University.

Benjamin Drew, 48 Summer Street, Plymouth, Mass., has copied all the inscriptions and epitaphs which are legible on the headstones of Burial Hill, and proposes to print them in a volume if the necessary number of subscribers can be obtained at two dollars each. An alphabetical register and a numbered map will accompany the transcriptions.

The British Museum will soon publish the poems of Herodas, together with other texts deciphered from recently acquired papyri. They are to be edited by Dr. Rutherford, and it is hoped not to repeat the unfortunate experience with the 'Constitution of Athens.'

A new edition of Landor's 'Imaginary Conversations' is to be issued in six volumes by J. M. Dent & Co., London, with bibliographical and explanatory notes by Charles G. Crump. Volume i. is before us, and we learn from the Introduction that Forster's edition of 1876 is to be followed, with the addition of but one Conversation, that between Don Pedro and Inez di Castro, which has never been reprinted in its original prose form. The notes are largely devoted to pointing out Landor's successive alterations and omissions; a "collected bibliography," showing the date of each Conversation and the forms in which it has appeared, is promised for the last volume. The typography is very handsome.

Having so lately reviewed the first three parts of the fifth edition of Prof. Foster's 'Text-book of Physiology' (Macmillan), we need not enlarge upon the fourth and concluding part just to hand. It finishes book iii., on the central nervous system and its instruments, and adds book iv., on the tissues and mechanisms of reproduction. In this last book one can but be struck by the beautiful English style of the author, as well as by his other merits, which we have already pointed out. Prof. Foster gives notice of a sixth carefully revised edition, which he hopes to produce early in the autumn.

We need but mention the issue of the third of the nine volumes of Shakspere's Works as reëdited by William Aldis Wright (Macmillan). It contains "The Taming of the Shrew," "All's Well That Ends Well," "Twelfth Night," and "The Winter's Tale." No other edition surpasses this for readers who ask no more than a scrupulous text in clear and elegant type, with notes and footnotes given up wholly to various readings.

The latest volume to appear in the "Adventure Series" is 'The Story of the Filibusters,' by James Jeffrey Roche (Macmillan). It is not confined to the filibusters *par excellence*—the Walker bands of freebooters in Nicaragua—but goes back for a brief notice of the various piratical attempts made upon Spanish possessions in America, and comes down to the *Virginius* affair as the vanishing-point of filibusterism. The narrative takes on a melodramatic tone at times, but is well written on the whole, and appears to be based upon adequate investigation. Spanish phrases and proper names are curiously spelled here and there—perhaps in order to show the author's sympathy with David Crockett (whose abridged autobiography fills the last half of the volume), who said: "I despise this way of spelling contrary to nature."

Kinglake's 'Eothen' is the latest addition to the Messrs. Putnam's series of "Knickerbocker Nuggets," and none of its predecessors can be judged more suitable to this handy and entertaining collection.

Any good list of idioms is a decided help in acquiring conversational facility in a foreign tongue, and one is not surprised to find August Koop's recent 'German Idioms' issued in an enlarged second edition under the changed title 'Dictionary of English Idioms, with their German Equivalents' (Boston: Carl Schoenhof). The English portion alone is arranged alphabetically according to the leading word of each idiom. Some of the examples are not idiomatic, as, "Whereby does he get his living?" "To be in queer streets"; some are vulgarisms, as, "She is great on the piano"; and some have anything but a colloquial stamp, as "A goshawk beats not a bunting,"

"Gray hairs are death's blossoms," "Do not prepare thyself to die before thou seest the sea." These lapses, however, are not numerous.

A text-book to be recommended is 'Readings from French History,' edited by Prof. O. B. Super of Dickinson College (Boston: Allyn & Bacon). It consists of extracts from Thierry, Barante, Louis Blanc, Michelet, Lamartine, Mignet, Lanfrey, Ségur, Thiers, and Guizot. The arrangement is chronological. Obviously, apart from the historical information it imparts, this little book affords a capital comparison of French styles. The notes are for the most part explicatory, and not critical either of style or of fact. To this extent the teacher may need to intervene. In connection with the foregoing we may mention a second volume of 'Extraits Historiques de Jules Michelet' (Paris: Hachette; Boston: Carl Schoenhof). It covers the period from the beginning of the reign of Louis XIV. to the battle of Waterloo, and is a useful complement to Prof. Super's selections. Each chapter is preceded by a summary in English, and besides the notes there is a biographical and geographical index; and besides two maps there are a number of portrait illustrations of a rather poor order.

Sir Alfred Lyall's Rede Lecture on 'Natural Religion in India' is issued by Macmillan & Co. in a pamphlet of sixty-four pages. He regards India as the most favorable country on earth for an investigation of religion in the making; all grades of it, from the lowest animism up to the most philosophic Brahmanism, being present, with many transition stages clearly marked. This state of things he regards as due to India's remarkable exemption from the domination of the State in religious matters for many centuries, and also to the absence of a regularly organized hierarchy; the result being to preserve the ancient polytheism in a sort of arrested development, or, better, to leave the natural flux and growth of religious ideas to run their own course.

In the current number of his monthly catalogue of United States Government Publications (Washington), Mr. J. H. Hickcox expresses his thanks for the additional support given to his invaluable enterprise by librarians and others. On p. 125 will be found an interesting list, by States, of the sheets of the great atlas of the United States which the Geological Survey is making, completed during the year ending June 30, 1891. The sheets are designated by the most prominent feature. Colorado, Iowa, and Kansas have received most attention.

The French correspondent of the *Athenæum* reports an observant bookseller as declaring that the historians are gaining on the novelists in popular appreciation; and confirmation of the statement, so far at least as declining sales of novels are concerned, is given in the current *Publishers' Circular*. Reference is made by the *Circular* to some late statistics which show a remarkable falling off in the demand for novels — one "highly popular [French] writer" lately having had 45,000 copies of a single work thrown back on his publisher's hands.

In the second *livraison* for this year of the *Journal du Droit International Privé*, appears an article by Thorvald Solberg on "La nouvelle loi des États-Unis sur la propriété littéraire et artistique au point de vue national et international."

Edmond Plauchut has an article "d'une grande actualité" in the *Revue Bleue* of July 25, on the massacre of French residents in Tientsin, particularly of the members of a religious sisterhood, June 22, 1870. The hired murderers were led to their task by a Chinese General who was afterwards chosen as special envoy to France to make amends for the outrages. In the critical situation of the country at the time, the affair received little notice.

In the *Revista Ilustrada* (New York), for July, we find a valuable descriptive and statistical article on Venezuela, printed in parallel columns in Spanish, French, and English.

Among the new periodicals which have reached our table, two deserve a word of mention. The second number of the *Journal of Comparative Neurology* was published in June at Cincinnati by Robert Clarke & Co. This journal is under the editorial direction of Prof. C. L. Herrick. Its especial aim is, by suitable investigation of the anatomy and physiology of the lower animals, to throw light on the evolution of human consciousness with its concomitants. It is illustrated and prints a list of current neurological literature. A series of articles constituting a laboratory guide to the study of the nervous system is contemplated. The other periodical is the *Architectural Record*, published at No. 14 Vesey Street in this city. Its form (octavo) is unusual for this class of magazines. The typography falls short of being elegant or taking, but the illustrations are very good if arbitrarily inserted, and the table of contents is interesting. A novel at the end is a decided innovation.

—The contrast between the opportunities for higher education afforded women in Germany and in this country is well brought out by two publications that reach us together. One is the sixth issue in the "Bibliothek der Frauenfrage," being a vigorous address on "Like Education for Man and Woman," delivered by Frau J. Kettler before the Berlin branch of the "Deutsche Frauenverein Reform." An appendix gives an account of the aims and methods of this society, founded March 30, 1888, and of the petition laid in its name before the Reichstag on April 18 of the present year. The latter asks, in brief, for the right of women to study in at least one gymnasium and university in each State of the Empire, and particularly for the admission into German universities, without separate examination, of women who have been students of medicine in the Swiss universities. While their German sisters are thus battling for the right to enter institutions of higher learning, American women graduates are conducting a quarterly journal—the *Outlook*—in the interest of post-graduate and professional studies. The second number, that for July, is admirable in the quiet way in which it avoids anything like a "plea" or a "demand," and dwells, in its contributed articles, upon the work which women have done and are doing at Zürich, Boston, and Bryn Mawr. An editorial miscellany of notes and gleanings rounds off a periodical that evidently means to waste no strength in prolonging a battle already decided, but to do its best to make the most of the victory.

—Visitors to the Royal Observatory, Greenwich, will hereafter miss the great cylindrical structure which has for a quarter-century and more covered the largest telescope possessed by the Observatory. Notwithstanding its size, the Astronomer Royal has now procured through the Lords Commissioners of the Admiralty a telescope more than twice as large as the old one. This step, long delayed at Greenwich, was absolutely required in the recent advances of astronomical science; and the optical peculiarities which the Astronomer Royal has embodied in the new instrument will render it one of the three most powerful telescopes at present in existence. The glass itself has a diameter of twenty-eight inches, and is figured by Sir Howard Grubb to a focal length of twenty-eight feet. This relatively short distance of the focal plane specially adapts the objective to photographic requirements. The peculiar architectural feature of the building which is to shelter the new telescope is that its dome, of thirty-six feet diameter, will surmount a tower having a diameter of only thirty-one feet. Technically, the form adopted is the surface generated by the revolution of an involute of a circle. The general exterior effect will be not unlike that of the cupola of a Turkish mosque, and the requirements of the astronomer are easily met mechanically, the necessary lightness and rigidity being secured by a framework of iron and steel. At the annual visitation of the Observatory in June, the Astronomer Royal, Mr. Christie, pressed upon the Board of Visitors the need, already severely felt, of providing accommodations for the increasing staff and the accumulating material. He recommends a comprehensive scheme, which the Board will doubtless accept, and which will provide for the expansion that has taken place in late years and may be expected to continue in the future. This comprises computing quarters for the magnetic, meteorologic, and astrophotographic branches of the establishment, fire proof houses for permanent storage of the books of calculation and photographic records, and a laboratory and dark galleries for spectroscopy and photography. In view of the advantage resulting from the use of electric lighting for the photographic, equatorial, and other instruments, it is very desirable that an electric-light installation should be provided for the observatory. This method of lighting is specially adapted to the requirements of an observatory, and might then be applied to the instruments generally, as has been done with marked success at the Royal Observatory, Cape Town, the Leipzig Observatory, and elsewhere. The new thirteen-inch photographic refractor has been brought into working shape, and is found to be very satisfactory and admirably adapted to its purpose. In particular, as its electrically controlled driving-clock proves to be very efficient, the great work of photographic star-charting to which the instrument is to be applied, will be thoroughly well done.

—For details of the spectroscopic, magnetic, and meteorologic work, reference must be had to the Astronomer Royal's report. The year 1890, however, presents some meteorologic peculiarities worth a note in passing. The aggregate number of hours during which the sun was above the horizon was 4,454. The ingenious Campbell-Stokes sunshine-recorder shows that there was bright sunshine for only 1,255 hours, or 35 hours below the average of the preceding 13 years. If constant sunshine is represented by unity, the mean proportion of sunshine for the year was thus only 0.282. The rainfall of 1890 was 21.9 inches, being 2.7 inches below the average of the preceding 49 years. The winter of 1890-91 was remarkable for a long period of exceptionally cold weather, which began November 25. From this day till the 22d of January the mean temperature on every day except January 13 was below the average. The temperature was continuously below 32 on November 27, 28, December 10 to 19, 22, 23, 25, 28 to 30, January 2, 6 to 8, 10, 11, 17 to 1

The mean temperature of December, 1890, was 10° below the average of the preceding forty-nine years. In this same month only 2.4 hours of sunshine were recorded. It is to be observed that the Board of Visitors of the Royal Observatory includes many of the leading and most eminent men of science in Great Britain. The names of Prof. Sir William Thomson, Sir George Airy, Lord Rayleigh, the Earl of Rosse, Sir George Stokes, Profs. Adams and Cayley, Dr. Huggins, and Prof. Darwin are sufficient guarantee that the work of its Government observatory, maintained at the public charges, is in every way worthy of the nation. Similar control of the affairs of our own national observatory must be urged with strenuous insistence for the attainment of similar ends.

HARDY'S CALCULUS.—I.

Elements of the Differential and Integral Calculus. Method of Rates. By Arthur Sherburne Hardy, Ph.D., Professor of Mathematics in Dartmouth College. Boston: Ginn & Co. 8vo, pp. xi, 239.

THE stock example given in most treatises on the Differential Calculus in order to illustrate the nature of the quantities with which it deals and the processes it employs, is that of a body falling freely from a point above the surface of the earth. Suppose, in order to give precision to our conceptions, that a bullet is dropped from the top of the Washington Monument. Every one knows that as the bullet descends it moves "faster and faster." Briefly, in 1 second it falls 16 feet; in 2 seconds, 4 times as far, or 64 feet; in 3 seconds, 9 times 16, or 144 feet; in 4 seconds, 16 times 16, or 256 feet. The rule for finding the whole distance from "start to finish" for any given time is this: Multiply the square of the number of seconds by 16. Taking the seconds separately, the bullet falls 16 feet in the first, 48 feet in the next, 80 feet in the third, and 112 feet in the fourth second. All this will be found in any, the most elementary, text-book of natural philosophy. As the bullet goes "faster and faster" as it descends, the question seems very naturally to arise, How fast is it moving at any given instant, say the end of the third second? Put the question in the form of a problem, and it reads: How fast is the bullet moving at the end of the third second from the time it was dropped? The answer which the Differential Calculus gives is: At the rate of 96 feet per second. The rule for finding the answer for any given instant is: Multiply twice the number of seconds by 16. This also will be found in any common-school text-book of natural philosophy.

All this seems very simple, and even those who do not know how to go to work to solve the problem think they understand perfectly well what it means, and what the answer means. They will, perhaps, be surprised to learn that the real meaning of the problem and its answer, and the explanation and justification of the method by which that answer is obtained in the Differential Calculus—a method in principle as simple as the old-fashioned arithmetical rule for reducing fractions to a common denominator—are matters about which the profoundest mathematicians and philosophers, from the invention of the Calculus down to the present time, about two centuries, have differed and still differ. From the vast number who have written on the subject we select two or three examples. Augustus De Morgan—of whom Mr. Ball, in his 'History of Mathematics,' has truly said, "He was perhaps more deeply read in the philosophy and history of mathematics than any of his contemporaries"—in a work specially devoted to this subject, says: "It is matter of common observation that every one who commences this study, even with the best elementary works, finds himself in the dark until some accidental combination of his own ideas throws light upon the subject." To this the present writer may be permitted to add that it is matter of individual observation on his part that persons who had acquired facility in using the Calculus in the solution of problems, acknowledged their inability to give any explanation of its processes which was satisfactory to others, or even to themselves. De Morgan returns to the subject in various places in his works, and the general conclusion to be derived from all he has written is, that the manner in which the subject is treated by Leibnitz, though false in logic and absurd in language, is superior to every other in practice, and is, in fact, the method which almost everybody uses in practice even when, like himself, they adopt another method of explaining the philosophy of the subject.

The late Mr. Todhunter, one of the ablest English mathematicians of the present century, tells the student to submit to his teacher's guidance, keep to work, and he will come out all right. August Comte in the sixth *leçon* of his 'Philosophie Positive,' after a masterly summary of the different theories, comes to the conclusion that the Differential Calculus (*Calcul des Fonctions Indirectes*) is in a "veritably provisory state," and that no one can hope to understand it, "above all in its applications," without becoming acquainted with all the fundamentally different modes of explanation. This was in 1830. Thirteen years afterwards, in 1843, he published his 'Géometrie Analytique,' the only special mathematical treatise he ever wrote. Appended to it was a "Programme du Cours de Calcul Differentiel," etc., from which it appears that he was still of the same opinion. After another thirteen years, in 1856, he published the first volume of his 'Synthèse Subjective: Traité de Philosophie Mathématique,' the only volume he lived to complete. In it he pronounces an "irrevocable condemnation" of every attempt to demonstrate deductively the fundamental law of the Calculus, as alike "irrational and useless." In his opinion, the elementary principles of the Calculus were to be expounded, not proved, to be believed because they are always in accordance with the facts of experience.

We have no room for further citations. The present state of the Differential Calculus may be briefly described. By far the greater number of text-books adopt what is called the "Method of Limits." In our opinion its only advantage is that it enables the authors to cover up to a certain extent the real difficulties of the subject under a cloud of seeming analogies, a multitude of words, and a multiplicity of algebraical formulæ. Let us return to our problem and its answer: At what rate is a falling bullet moving at the end of the third second? Answer: At the rate of ninety-six feet per second. The *rate* of a moving body is the ratio of the number denoting the distance passed over in any portion of time to the number denoting the time occupied in passing over that distance. Thus, if a train of cars runs 10 miles in 20 minutes, or one-third of an hour, it is said to run the 10 miles at the rate of 30 miles an hour, because the ratio of 10 to one-third is 30. The rate is always found by dividing the number denoting the distance by the number denoting the time; more concisely, the ordinary way of stating it is: Divide the distance by the time. When the whole distance passed over divided by the whole time occupied in passing over it, and any distance taken anywhere within the whole divided by the time occupied in passing over it, give the same quotient, the motion is said to be uniform, or, in mathematical form, the distances are proportional to the times. Uniform motion is in almost, perhaps quite, all cases a mere mental conception, an intellectual assumption, never realized in fact. Assuming that the distance from New York to Philadelphia is 90 miles, and that a train of cars goes over it in 3 hours, we say it ran at the rate of 30 miles an hour. But the chances are infinitely great that it did not run any one mile in exactly two minutes. All numerical statements of a rate are statements of an average or mean rate. It is always so much space passed over in so much time. How the space was passed over, whether uniformly or otherwise, is another matter. In various departments of practical life the statement of a rate is reversed: instead of so many units of space in one unit of time, it is so many units of time occupied in passing over one unit of space. The one method is always easily convertible into the other. Tell a patron of the race-course that a certain horse trotted a certain distance at the rate of 25 miles an hour, and the statement does not at once convey any definite notion to his mind. Tell him the horse "trotted in 2:24," meaning 1 mile in 2 minutes 24 seconds, and all seems clear. Both statements mean the same thing; 2 minutes 24 seconds is the twenty-fifth part of one hour.

When we attempt to apply these very simple considerations to our problem and its answer, we are at once plunged in a maze of the most glaring absurdities. How long is the end of the third second? How much space did the bullet pass over *at* the end of the third second? How long was it after the third second ended before the fourth second began? The bullet, *at* the end of the third second, was in a certain definite position relatively to everything else in the universe, and after any interval, however small, it was in a different position. State any interval of time, though it be but the ten-thousand-millionth of a second, and, without going beyond the ground rules of arithmetic, we can show how far it went in that interval, what was its *mean* or *average* rate for that interval, and further that it did not move over that interval at any one rate. Stated in the language of logic and mathematics, "*at* an instant" and "*at* a point" are neither of them predicable of the subjects "motion" or "continuous change" of any kind. This is as true of uniform as of continuously varying motion. By an excusable and almost unavoidable license of language, we say that *at* a given instant a train of cars is running at a certain rate; but this is only to avoid the long circumlocution of saying: Taking any interval of time, great or small, within which the given instant lies, and dividing by it the distance passed over in that interval, you will get a certain rate. In popular language and in popular thought, what Kant would call the "pure intuition" (*reine Anschauung*) of motion is mixed up and confounded with a number of phenomena which always accompany it, but do not constitute it. But there is even in the minds of the uneducated a consciousness of the truth. Whoever first conceived the idea of taking instantaneous photographs, we presume, was a person who had never studied the Differential Calculus, or bothered himself about the metaphysics

of "pure intuitions *à priori*." But he certainly had a conception of the fact that just in proportion to the instantaneousness of the action of his camera, his photograph would resemble one of the same object in the same position at rest. It is needless to multiply illustrations. It may be asked, Is there not some difference, even at a given instant, between a body in motion and one at rest? There certainly is, but it is not to be ascertained by dividing a point in space by an instant in time, nor is it necessary to our purpose to investigate what that difference is. One thing is certain: there is no such condition or conception, no such thing or thought, as instantaneous motion. When we ask, At what rate is the bullet moving at the end of the third second? we are inquiring about some interval of time and some distance in space at the beginning or end of which or within which that instant occurs, or else the problem is meaningless and the answer absurd.

FOUR NOVELS.

Tales of Two Countries. By Alexander Kielland. Translated by William Archer. Harper & Bros.

Dally. By Maria Louise Pool. Harper & Bros.

Iduna, and Other Stories. By George A. Hibbard. Harper & Bros.

Main-Travelled Roads. By Hamlin Garland. *Arena* Publishing Company.

THE half-score of studies in imaginative prose which have just found such an admirable translator are, as may be learned from the short biography by Prof. Boyesen which serves as an introduction to them, the work of the Norwegian author's 'prentice hand. But it was none the less a hand which had already gained the skill to draw with firm and broad strokes. Tentative as they are, both in subject and treatment, no signs of hesitation appear in the execution of these small but boldly outlined sketches. What first strikes the reader after turning them over, one by one, is the range and variety of the themes on which they touch. The most unlike among them differ almost as widely in form and thought as a poem may from a prose tale. Before the collection was finished, the author had already made himself as familiar with the outward aspect, and with at least some phases of the life, of the Parisian boulevard as he was with the wild natural scenery of the peat-moor and heath and the paralyzing monotony of existence in a "stagnant little town" in his own country. "Romance and Reality," a brief history of matrimonial shipwreck, shows the dreary details of this provincial stagnation. Though told with humor and feeling, it is a trifle didactic in tone, and is, perhaps for this reason, less successful in general effect than its companion pieces. In "Pharaoh," a little spiritual drama, as strong as it is brief, the voice of the Parisian mob is heard, though only in a "long, withdrawing roar." A high order of talent was needed to produce within the compass of so few pages, and by means so simple as the chance visit of a commonplace young couple from Lyons to the fête of Saint-Germain, so large a perspective of life as is disclosed in the little episode called "At the Fair." Conspicuous amid the scenes which the painted curtains hide from the eyes of the holiday-makers is the hauntingly pathetic figure of the tiny mountebank, in green and red tights, who sobs, under his sorry fool's-cap, the refrain of his grief, "Maman m'a pris mon sou!" A happier picture of boyhood is drawn in "The Parsonage," where the opening of spring on the Norway coast is charmingly described, and where the rudely interrupted happiness is not restored, only because the good pastor, so wise in the ways of Providence, "could not understand his children." However slight in motive they may seem individually, these novelettes, as they were called in the original, have the qualities that put them in the ranks of the literature that has more than a day to live.

In spite of the somewhat confusing effect of the contrasted dialects in which it is largely written, 'Dally' contains some very entertaining pages. The half-savage little Carolina waif, brought by the whim of a fine lady, on a tour in the South, into the orderly New England home of the widow Abijah Jacobs, speedily wins her way into the affections of the simple-hearted woman, whose ideas of domestic economy she so sadly sets at defiance. An arch enemy, however, she does not fail to find. With some of her methods of avenging herself on the tormentor it will be difficult for other "professors" than the self-reproaching widow Jacobs not to sympathize, but the author's hardly concealed satisfaction in the "Nemesis" (paralytic in character) which overtakes "her that was a Jones," would surely put to blush the Ransom code of morals. Dally, in constant need of soap and water and of discipline, or in a softened mood "reckoning 'tis better to pray nor 'tis to cuss," is always attractive and possible; but Dally grown up, "almost iridescent" in face, and in a "clinging" gown of the New York lady's ordering, with even her adopted idioms smoothed from her speech, savors too much of the conventional type of heroine. Altogether, the rather melodramatic key to which the story is wound up towards the end does not form as happy a termination as was promised by the earlier quiet and recognizable descriptions of the good people of Ransom.

"Iduna," the first of the stories in the volume to which it gives its name, is chiefly noticeable as the failure of an ambitious attempt at originality. The young girl who has been kept in ignorance of death until, in a thunderstorm, "when there came a crash as if the world itself were shattered," she finds herself alone with it, can only be rivalled in unreality by the persons who surround her. The other stories reach merely a crude sensationalism. As specimens of style they offer some amusement, if not instruction. "We cackled a fusillade of cachinnations in salute to new ones [jokes], as if those of which we had been fond for years were as nothing in comparison." "The pellet of the pistol ball shall physic my present pain—characteristic cure—life true to itself to the last." In this last delicate fancy allowance must be made for the heated brain of the intending suicide to whom it is attributed. The following is a bit of the author's narrative: "The countenance . . . of a connoisseur, aglow as the banquet and flavor of some rare, age-thinned ichor of some royal vine melt along two senses for the instant seemingly made exquisitely one—were but blanks to the child's face as she finished the quick feat of swallowing the first mouthful."

If the title of 'Main-Travelled Roads' contains a suggestion of sentimental journeying, the suggestion is a delusion. Mr. Garland writes with the pen of uncompromising realism. The atmosphere to which he confines himself is that of farm life in the Mississippi Valley. Throughout his six short stories the point of view, as well as the literary manner, is consistently American. But this does not prevent the conclusion of the first one of the group from showing an indifference to the question of morality worthy of an advanced disciple of Flaubert or Daudet. It must be added, however, that the sundering of family ties resolved upon in "Ed" Kinney's neglected kitchen offers no dangerous illusions to the imagination. The note of "modernity" is nowhere more fully struck than when the Western tempter proposes that in the future they shall go "maybe to Europe" and to "the theatre and concerts." Life as seen through these pages does not present a buoyant face. The mortgage, the grasshopper, "the injustice of his fellow-men" combine to make the battle a losing one to the settler who "rises into a magnificent type" in the "dusk of that far-off valley." There is no doubt that power of observation and of rendering the results with exactness is disclosed in these stories; but they lose by a successive reading. Descriptions of the same uninviting interiors, the same birds and insects, the same hot corn-rows and wheat fields, finally produce an impression of monotony and of mannerism. "Under the Lion's Paw" and "Mrs. Ripley's Trip" make strong and successful appeals to the emotions, while "Among the Corn-Rows" looks into a future of brighter prospects than are realized by Mr. Garland's travellers on the main road.

The Battle of Seven Pines. By Gustavus W. Smith, formerly Major-General Confederate States Army. New York: C. G. Crawford. 8vo, pp. 202.

THE fighting at Seven Pines and Fair Oaks, near Richmond, on May 31 and June 1, 1862, gave rise to controversy on both National and Confederate sides. On the National side, Generals Keyes and Casey contended that the despatches and reports of McClellan did great injustice to Keyes's corps, and especially to Casey's division, by assuming that their being dislodged by the enemy was due to bad handling and lack of bravery, instead of its being the result of McClellan's own fault in putting them over the Chickahominy and leaving them unsupported against a crushing concentration of the Confederates upon them. On the Confederate side, Gen. Joseph E. Johnston, who was in command, was disabled by a severe wound late in the afternoon of May 31, and Gen. Smith, as second in rank, succeeded him. In the fighting of June 1 the National troops repulsed the attacks of the Confederates on the new lines to which Keyes's Corps had retreated, and in which it was supported by Sumner and Heintzelman. On June 2 President Davis put Gen. Lee in command of the Confederate Army, relieving Gen. Smith. The latter was taken ill just afterwards, and continued much broken in health, so that he did little active field service again. To this illness he attributes his failure to secure reports from subordinates, and thus to prevent erroneous accounts of the engagement from getting a rooted place in current history. He now makes a review of the events, collating reports on both sides, and adding much original material from his own papers and correspondence.

The drift of opinion has been in favor of the theory that Johnston's plan of attack had failed of full effect by reason of tardiness on the part of General Smith's troops (Whiting's and A. P. Hill's divisions) and those of General Huger in coöperating with Longstreet's troops on May 31, and that Smith failed in giving purpose and force to the Confederate movements on June 1. General Smith contends that this inverts the truth: that his troops and those of Huger were prompt in reaching the positions assigned them on the 31st, and that

the only error was that of Longstreet, who wholly missed the road upon which he was to march his own division, and took that upon which D. H. Hill had advanced, instead of moving parallel to Hill. He insists that Longstreet thus blocked the way against Huger's continued movement and became responsible for the disjointed attack which occurred, instead of the concentrated and overwhelming one which had been intended. As to the 1st of June, he argues that Longstreet failed to send reinforcements to the left wing of the Confederates as ordered, and represented himself as fighting at desperate odds so as to need help himself instead of sending it to others; that, in fact, Longstreet was not seriously engaged or seriously threatened, and that the purpose of the commandant (Smith himself) was thus defeated.

It is only fair to say that the array of evidence which Gen. Smith presents is strong enough to command attention, and must modify the received reports of this episode in the civil war unless it can be rebutted by superior weight of proof. His documents (of some of the more important of which he gives facsimiles) are from the chief actors themselves, and seem to be of unquestionable authenticity. His tone is dignified and self-respecting, and he strikes manfully at the real points in dispute without indulging in pettiness or wrangling. His book, therefore, must be regarded as a worthy treatment of an historic question of real doubt. Gen. Longstreet is still living, though it is reported that his work upon his military memoirs has been suspended by reason of his delicate health; and it is to be hoped that he may not fail to give the world a full explanation of the facts so strongly marshalled by Gen. Smith.

Notes on American Schools and Training Colleges. By J. G. Fitch, M.A., LL.D. Macmillan & Co. Pp. 133.

THESE notes, although reprinted from an English educational blue-book, have a special value for Americans, inasmuch as they show how our public-school system appears to one of the most eminent of English educators; and, although in the main encouraging, they intensify our consciousness of the defects of this system. The author, one of Her Majesty's Inspectors of Training Colleges, during a recent visit to this country saw some of our best schools; and in this report to Parliament he embodies the results of his investigation.

Naturally, one of the first things mentioned by Mr. Fitch is the diversity of organization and of administration in American schools, due to the autonomy of the local authorities in educational matters; and he rightly says that the one prerogative of an independent and autonomous government with which the States are not likely to part is the absolute control of public education. Perhaps the most serious evil in our public-school system mentioned by Mr. Fitch is the one growing out of this autonomy of the local authorities, namely, the influence of local politics in school administration. This influence he notes especially in relation to the school superintendent. Of this peculiarly American officer he says:

"Within his own domain, whether a State, a county, or a city, he combines in himself the characters of a minister of public instruction, an inspector of schools, a licenser of teachers, and a professor of pedagogy. . . . The main drawback to the usefulness of the school superintendent is his precarious tenure of office. He is appointed by a local school committee, which is itself directly or indirectly the product of popular election, and which is liable to frequent changes. He is himself subject to biennial or even to annual reëlection, and cannot count on that reëlection unless he is *persona grata* to the local authority of the day. . . . Every school superintendent has, therefore, a personal interest in local elections, which sometimes necessarily identifies him with party controversies, and which must in any case tend to withdraw his attention from his proper duties."

The remedy suggested by Mr. Fitch is the application of the principles of civil-service reform in the sphere of education. He adds:

"A body of public officers like the members of the permanent Civil Service in England, bound by the traditional etiquette of their profession to hold themselves aloof from all party politics, and to place their best services at the disposal of chiefs of different administrations, yet, at the same time, secure in their position *quamdiu se bene gesserint*, does not exist in America. Until it exists, the nation will not induce the ablest men to take up departmental duty as a life's profession, nor will it obtain, even from those who now undertake it, the fullest and highest service which they are capable of rendering."

Mr. Fitch has spared us the disgrace of an extended report on the way teachers are appointed in many of our cities, and on their liability to displacement because of partisan intrigue, nepotism, and prejudices of sex and nationality. He might have added that, until the principles of civil-service reform are extended to the appointment and tenure of office of teachers, the nation will not secure the most efficient service in the school-room.

Noting the evil influence of local politics, the disorganized condition of our educational "system," and the inadequate provision for education in some States—Alabama, for example, according to official report, providing free public schools only seventy and one-half days in the year—Mr. Fitch seems to regret that there is no central authority that has any influence. The one important point that he has failed to notice, however, is that, in a republic like ours, the autonomy of the local authorities is the great safeguard of education. It is this which gives every good citizen a feeling of personal interest and responsibility in the schools of his own municipality or township. Any form of national or State aid to education—land-grants, Blair Bill, or the like—or any scheme of centralization, is likely to be opposed by thoughtful educators, unless some guarantee can be given that a wholesome measure of local responsibility will be retained. A distinguishing merit (and not the only one) of the old "district-school" system was that it intensified this feeling of local responsibility. Probably such a general interest in the public schools, and sense of individual responsibility for their welfare, as prevailed in New England towns under this system, has never existed elsewhere in this country or in England. Elaborate educational machinery will not atone for lack of popular interest in the schools. As Spencer has attempted to show, we must not educate our children at the cost of uneducating the community. Mr. Fitch himself says that "the one great safeguard for the continued and rapid improvement of education in America is the universal interest shown in it by the community"; but this interest is in great degree due to the autonomy of the local authorities in educational matters.

Among the other evils noticed by Mr. Fitch are the following: small playgrounds and too limited air-space for pupils in some schools, subterraneous influences in the introduction of school-books, too much memorizing, idolatry of text-books, method-cramming and slavery to pedagogical formulæ, the crushing out of individuality and originality by the custom of judging schools by methods and machinery adopted rather than by results achieved. Among the things that he commends are the continuous blackboards on the walls of our school-rooms, the practice of oral composition, the adoption of the Grube method and the custom of giving original problems in arithmetic, the excellence of the discipline, the lessons in patriotism, platform exercises, teachers' institutes and associations, the Chautauqua movement, Teachers' Reading Circles, the popular interest in education, and the attention given by teachers to the philosophy of education and to psychology. Many points of similarity and of contrast between English and American schools and teachers are also presented, an account of our normal schools and means of educating teachers is given, and some attention is devoted to Canadian schools.

The book as a whole is well written and interesting. The author, already favorably known to Americans by his 'Lectures on Teaching,' will increase their gratitude and esteem by the appreciative spirit in which he has made this brief but valuable survey of American education.

Stevens's Facsimiles of Manuscripts in European Archives relating to America. 1773–1783. Vol. VIII. Nos. 754 to 849. London: B. F. Stevens.

THE eighth volume of these facsimiles is more interesting than those which immediately preceded it. We are not obliged, in reading it, to climb again the treadmill of the petty intrigues and small conspiracies of 1777. The end of that year brought to Paris the news of Burgoyne's surrender, and thus opened a new period in the dealings of the French Court with the American Commissioners. This may, indeed, be considered the beginning of the diplomatic history of the United States. Franklin, Deane, and Lee ceased to be the agents of a band of insurgents to whom unacknowledged aid was to be given through secret channels, and became the representatives of an independent nation, dealing openly, if not quite on equal terms, with French Ministers of State. In the first half of January, 1778, we find the Commissioners answering two questions. The papers are preserved in the French Foreign Office. In each case question and answer are in the same handwriting, yet there can be little doubt that the questions were really asked on the part of the French Government and answered by the American envoys. One document is in the handwriting of Dr. Franklin. It runs as follows:

"Question. What is necessary to be done to give such Satisfaction to the American Commissioners, as to engage them not to listen to any Propositions from England for a new Connection with that Country?

"Answer. The Commissioners have long since proposed a Treaty of Amity and Commerce, which is not yet concluded: the immediate Conclusion of that Treaty will remove the Uncertainty they are under with regard to it, and give them such a Reliance on the Friendship of France, as to reject firmly all Propositions made to them of Peace from England, which have not for their Basis the entire Freedom and Independence of America, both in Matters of Government and Commerce." (774.)

The date, 8th January, 1778, has been added by another hand. The second paper, written out by Silas Deane, appears to have been presented three days later:

"Question. What is necessary to be done immediately so to satisfy the Congress and the People of America with the Utility and Certainty of the Friendship of France and Spain,

in securing their Independence that they also will reject all Propositions from England for Peace inconsistent with that Independence.

"Answer. The Commissioners think, that an immediate engagement on the Part of these Kingdoms to guarantee the present Possessions of the Congress in America, with such others as they may acquire on the Continent during the War; and either to enter into a War against England, or to furnish the Congress with Money (if they do not) to carry on the War, untill a safe Peace can be obtained, and untill, all that the English now possess on the Continent shall be conquered, which will be necessary both for the weakening of their Power, and for securing the Fisheries to the United States and their allies. And that the Treaty containing Engagements to this Effect be directly communicated to the Congress.

"If France and Spain, or either of them as Auxiliary, would furnish us with a Fleet of Six or Eight Sail of the Line or more, this would give the Congress and the People of America the most certain Prospect, of a favorable, and speedy End of the War, to their full Satisfaction, and prevent their listening to any Accommodation or Terms, short of absolute Independency." (776.)

It was less than a month from the time that these questions were answered that two treaties, one of amity and commerce, the other of alliance, were signed between the Most Christian King and the United States of America.

The eighth volume of the facsimiles is not entirely given up to diplomacy. It contains several letters from French officers in America, and especially from the adventurer known as Baron de Kalb. The claim to gratitude on the part of Americans, set up by some lovers of Germany in behalf of that country on account of the services of Kalb and Steuben, is one of the comic things in our history. John Kalb, whose title of Baron would appear to have been assumed without authority, was a thoroughgoing soldier of fortune. Although born in Germany, he never in his life held a German commission. He was employed in the French service, and in that of Poland in the French interest, and rose to the rank of lieutenant-colonel. He came to America with the connivance of the French Ministry, but principally as an agent of the Comte de Broglie. This nobleman had held a position of power and influence in the reign of Louis XV. Through him the secret correspondence which that monarch kept up in foreign courts, behind the backs of his acknowledged advisers, had been carried on. The accession of Louis XVI. had put an end to these intrigues and left the Comte de Broglie without occupation. His active mind conceived a bold project for a new rise to importance. He would go to America, with sufficient guarantees as to salary and honors, supersede Washington, become generalissimo, protector, or what not, and return to Europe crowned with laurels and clothed in glory. That this scheme, long suspected, was actually entertained, there is now no doubt. Friedrich Kapp explained the whole matter in his Life of Kalb. The latter was to prepare Broglie's path in America, and was sent out with Lafayette for that purpose. The Marquis, who was only nineteen years old, was probably ignorant of the scheme. Whether Silas Deane knew of it when he gave Kalb his commission as Major-General in the army of the United States, is uncertain. Nor will it ever be known what Kalb himself thought of the plan, in his own heart, at the time when he left France with instructions to see about carrying it out. He had already been in America, in 1768, to collect information concerning the state of the country and the condition of public feeling, for the use of the French Ministers. He may be supposed to have known from the beginning, better than Broglie, how futile were the latter's hopes. In any case, he had not been long in America, in 1777, before he sent word to his employer that the great project which he had taken up with so much pleasure, could not possibly succeed. The proposed plan was not feasible. It would be considered a crying injustice to Washington and an act of violence towards the country (755).

The volume before us contains several of Kalb's letters, full of dissatisfaction and of the desire to get back to France. But he looked on Broglie as his patron, and awaited the latter's permission for his return, doing good military service meanwhile to the United States, whose pay he was taking, but constantly writing long reports in cipher for the use of the French Ministers and nobles, in whom his chief hopes of future advancement were centred. These reports were probably the chief cause of his being retained in America by his patrons in Europe. He complains frequently of not receiving letters. Once only, as we know from Kapp, did Broglie vouchsafe him a reply. By it Kalb was instructed to send his despatches in cipher thenceforth direct to the French Minister of War. Thus is the double part which he played the more clearly exposed.

Crime and Its Causes. By William Douglas Morrison, of H. M. Prison, Wandsworth. London: Swan Sonnenschein & Co. 1891.

It is not often the case that public opinion is so confuted as it is by this little book. There is probably no proposition that would command more general assent than the statement that crime is caused by poverty. A recent writer upon socialism, and one of rather noticeably moderate views, has declared that a community where no one was hungry would be the veritable celestial city, and a similar belief colors deeply the philanthropy of the day. Upon this assumption Mr. Morrison forcibly remarks:

"It has been reserved for this generation to propagate the absurdity that the want of money is the root of all evil; all the wisest teachers of mankind have hitherto been disposed to think differently, and criminal statistics are far from demonstrating that they are wrong. . . . A mere increase of material prosperity generates as many evils as it destroys; it may diminish offences against property, but it augments offences against the person, and multiplies drunkenness to an alarming extent. While it is an undoubted fact that material wretchedness has a debasing effect both morally and physically, it is also equally true that the same results are sometimes found to flow from an increase of economic well-being."

These paradoxical statements would perhaps be dismissed by many persons as mere expressions of opinion, but Mr. Morrison remorselessly proceeds to adduce overwhelming proofs of his position. In the first place, he explodes the common theory that crime is most rife during the winter months, when work is hard to obtain. From the last sextennial diagram of the Prison Commissioners, it appears that the number of prisoners in the local prisons of England and Wales is lowest in February, and increases until October, when it begins to decline and continues to lessen until February is again reached. This phenomenon has been explained as due to the habits of the tramps, who leave the workhouses in spring and roam about in a predatory manner during the warm weather. Unfortunately for this theory, Mr. Morrison is provided with some figures as to the arrests for vagrancy, which indicate that far more persons are imprisoned on this charge in winter than in summer. What is even more contrary to our prepossessions as to the effects of the English climate, the number of suicides in London during the months of May and June is to the number in November and December as 10 to 7.

Mr. Morrison next proceeds to fortify his position by figures concerning crimes committed by destitute persons. He defines a destitute person as one who is homeless and out of work, and points out that the offences most likely to be committed by such persons are begging and theft. Cases of this kind are about 15 per cent. of those tried in England and Wales, 8 per cent. being offences against property, and the remainder offences against the vagrancy acts. But it appears that one-half of the offenders against property, so far from being destitute, were actually at work and earning wages at the time of their arrest. Of the remaining 4 per cent., one-half belong to the class of habitual criminals. Only 2 per cent., therefore, are driven to crime by destitution.

Of the offenders against the vagrancy acts less than half were charged with begging, and of these many were professional beggars. By a careful process of exclusion, Mr. Morrison reaches the result that of these also not more than 2 per cent. are made criminals by destitution. He quotes as additional evidence in support of his conclusion a fact referred to by M. Monod of the Ministry of the Interior in France. It seems that a benevolent citizen determined to offer work at four francs a day to every sturdy beggar who presented himself. In the course of eight months he was favored with calls from 727 persons of this class, all complaining of lack of work. Every one was asked to come the following day to receive a letter that would insure him employment at the wages above specified. More than half (415) never came for the letter; 138 returned for the letter, but never presented it; only 18 worked more than three days.

Upon the whole, Mr. Morrison concludes that not 5 per cent. of the persons tried for crime in England are driven to offend by absolute want, and he observes that the practice of attributing crime to this cause tends to encourage it. "It creates a false sentiment of compassion for the utterly worthless; it prevents them from being dealt with according to their deserts, and, worst of all, it is apt to make the working population imagine that there is a community of interests between them and the criminal classes which does not in reality exist." Mr. Morrison adds that his personal experience has satisfied him that real workingmen seldom beg when out of work, and that those who do are to a large extent elderly and enfeebled men deprived of employment by trade-union rules, which require the payment of equal wages to all members. When men become unable to do a full day's work at their trade, these rules prevent them from working at their trade at all. It is significant that in spite of the economic disadvantages under which women labor, only one woman becomes a beggar to every four men, or, excluding fallen women, to every eight men. If we proceed to examine the figures showing the number of offences which from their character must be committed by comparatively well-to-do persons, we shall find no reason to modify these conclusions. In spite of the fact that this class has many facilities for escaping the penalty of imprisonment, they probably furnish quite their full quota to the jails. It is said that in Prussia the liberal professions contribute twice their proper share to the criminal population, and a like state of affairs seems to exist in other countries. Speaking generally, the number of offences against

property is greater among rich than among poor nations. Twice as many persons are tried for theft in England as in Ireland; thrice as many in England as in Spain. In England one person in forty-two is proceeded against criminally; in India one in one hundred and ninety-five.

Another misconception corrected by Mr. Morrison relates to the volume of crime in England, which is popularly supposed to be decreasing. This belief is based upon the fact that there was a daily average of over 20,000 persons in prison in 1878, and of about 15,000 in 1888. This average, however, depends upon the length of sentence prisoners receive, as well as upon the number of prisoners committed. As a matter of fact, this number is greater than before, from which it follows that there are more short sentences now pronounced, although there is no material diminution in the number of grave offences. This increase of crime is due partly to changes in legislation. In 1888–'89 more than 80,000 persons were tried for violating the Elementary Education Act, and Mr. Morrison comments in a passage of extreme importance upon the tendency of modern legislatures to pass penal laws affecting the daily lives of large classes in the community. The effect of these laws is to fill the jails, and put the prison taint upon a greater number of the population. A man may be sent to prison for violating a municipal by-law, and emerge with criminal associations that will make him a greater menace to society than a hundred offenders against municipal regulations. Wise laws will keep the people out of jail rather than drive them into it.

We cannot consider the evidence that leads Mr. Morrison to think that crime is increasing in other countries, and we are not unwilling to pass over the subject, because he has been misled concerning the United States. We believe that no satisfactory statistics are in existence concerning the amount of crime in this country. Mr. Morrison is excusable for stating, upon the authority of Mr. D. A. Wells and Mr. H. Wines, that it is increasing, but we do not understand that Mr. Wines establishes this proposition by unimpeachable figures, and Mr. Wells is himself misled by a comparison of the census returns of 1850 and 1880. These returns were not made upon the same principle, and are useless for purposes of comparison. As to the influence of climate upon crime, Mr. Morrison's reasoning is extremely ingenious, although not to our mind altogether satisfactory, but our space does not allow us to state his conclusions. For the same reason we must pass over the valuable observations upon the relations of sex and age to crime, the punishment of crime, and the physical and mental peculiarities of criminals. The illustrations that we have given of Mr. Morrison's method will indicate the importance of his conclusions. We shall only add that we have seldom met with a sociological investigation more distinguished for its thoroughly scientific spirit, or for the elegance of its statistical inductions.

Francis Wayland. By James O. Murray, Dean and Professor of English Literature in Princeton College. [American Religious Leaders.] Boston: Houghton, Mifflin & Co. 1891.

Prof. Murray's book is a great improvement on the sketches of Dr. Muhlenberg and Wilbur Fisk in the same series, while still far below the level of Dr. Allen's 'Jonathan Edwards.' The sketch of Wayland is too little of a study, too much of a eulogy, but at least the author has a genuine admiration for his character and work, and does not damn him with faint praise after the manner of Prof. Prentice in his sketch of Fisk, nor bang-whang the glory of his sect into our ears; having, perhaps, taken warning from his predecessor's terrible example. The division of his matter has led to some redundancy, the last chapters, on Dr. Wayland as an educator, author, preacher, philanthropist, and citizen, going over a good deal of ground that had been traversed in the first part. It is not clear why the substance of these chapters should not all have been interwoven with the chapters that repeat—for it is mainly repetition and abridgment of a more elaborate biography—the story of his busy life.

The personal influences that shaped Wayland's earlier manhood were those of Moses Stuart of Andover and Dr. Nott of Union College, two very different men, the first a genuine scholar, the second an ecclesiastico-political educator. Dr. Wayland's first and only regular pastorate was in Boston, and, while his biographer appeals from his own mournful depreciation of it, it is evident that it was a failure in all concrete particulars. Dr. Wayland's strength was in occasional sermons, and these did more for his reputation than for his parish, which had no prosperity with him. The most famous occasional sermon of his life was that preached on Sunday evening, October 26, 1823, when he was twenty-seven years old, "The Moral Dignity of the Missionary Enterprise." It had a great currency in many languages, and did more, perhaps, than any sermon of the century to incite the churches to missionary activities; yet, as preached, it seems to have fallen flat enough on the little company that heard it, chilled by the nor'easter which obliged the preacher to wear his great coat while uttering his majestic periods.

His presidency of Brown University from 1827 to 1855 was the best work of his life. The institution was in a very feeble state when he took charge of it, and in almost comical disorder. It was a characteristic feature that "a barrel of ale was always kept on tap in the cellar, to which all undergraduates had free access." But, notwithstanding his reforms of administration, the improvement of the library and the introduction of scientific studies, the number of students steadily decreased. In 1840 he went to Europe, where he had slight appreciation of anything beautiful, and was not a little nettled to find in England "all the talk about abolition," with some candid expressions about the attitude of the American churches and about a recent volume of his own, in which his interpretation of the Constitution had got the better of his moral sense. Notwithstanding these discouragements, he studied carefully the English universities, and carried back with him many ideas that, coalescing with his original tendencies, produced, a few years later, a policy of reform which his struggling and decadent college accepted to prevent his resignation. It was a day of small things: a total endowment of $34,000 had not been increased a cent for forty years. Prof. Murray gives a good analysis of Dr. Wayland's project of reform, which is too elaborate to reproduce, but it places Dr. Wayland in the front rank of college reformers, among the first in his demand for wider scientific studies and the elective system. Some of his ideas have not stood the test of time, but the most central have done so, and their general adoption by the college was the beginning of its better days, though an endowment of $125,000 which he asked for, and got, did perhaps as much. His plea for a longer course of study must be taken in connection with the preparation then demanded, and other features of his scheme, to be understood. It was not essentially contradictory of President Eliot's recommendation of a three-years course.

When Dr. Wayland resigned his office in 1855, he had ten years more to live, for several of which he supplied the pulpit of the church in Providence which Roger Williams founded, and did much literary work. His three text-books have now reached a sale of 200,000 copies. His 'Political Economy' had the merit of advocating free trade in an intensely protectionist community. His 'Intellectual Philosophy' never had the currency of his 'Moral Science.' The latter, published in 1835, pronounced for immediate emancipation, but with limitations that drew the abolitionists' fire. In 1838 his 'Limitations of Human Responsibility' argued the inability of the general Government to abolish slavery in the District of Columbia, a position from which he receded before long. His biographer has given, though not without regret and in an apologetic fashion, evidence of Wayland's distrust of the abolitionists' methods, and his criticism of their perfervid speech. There is something touching in the innocence of Prof. Murray's suggestion that if he had lived to see the work of emancipation fully accomplished by the war, "no man would have sooner recognized the merits of these abolitionists." In 1844 he voted for Henry Clay, but in 1848 he was a Free-Soiler, and in the fifties a stern opponent of the Slave Power's arrogant aggressions. In religious liberality, combined with an unbending orthodoxy with the edges of its Calvinism somewhat smoothed away, he was distinctly in advance of the majority of Christians in his generation. What was dearest to him in the Baptist polity of his life-long devotion was its assertion of the rights of free thought and the independence of the local congregation.

State and Federal Government in Switzerland. By John Martin Vincent, Ph.D., Librarian and Instructor in the Department of History and Politics, Johns Hopkins University. Baltimore: Johns Hopkins Press. 1891.

The historian of a hundred years hence may well remark that, at the close of the nineteenth century, there was a general dissatisfaction throughout the United States with the working of our political institutions, and, as a consequence, there sprang up on all sides societies for the study of political science with the object of finding out the cause of the prevailing troubles; that chairs of political science were established in most of the leading universities for the same purpose, the occupants vying with each other in publishing studies of the different governments of the world. Among the foremost in this work is the Johns Hopkins University, and in its publications the work of Mr. Vincent needs to take no second place. There is no Government which deserves more attention in the United States than that of Switzerland, and this little book furnishes a statement of the facts so clear and exhaustive as to call for unqualified admiration and praise. In fact, it bristles all over with points for discussion having an electric force of attraction. We must confine ourselves to two, and those very briefly, the relation of the executive to the legislative, and the much-talked-of *referendum*.

The Federal Executive consists of seven

members, chosen by the two houses in joint session for three years, from all Swiss citizens eligible to either branch of the Legislature, though the candidates not only need not but must not be members of the Legislature. One of the seven members is chosen each year, also by the houses in joint session, to be the President for that year. By the Constitution, the Federal Council introduces bills or resolutions into the Federal Assembly, and gives its opinion upon the proposals submitted to it by the councils or the cantons. It administers the finances of the Confederation, introduces the budget, and submits accounts of receipts and expenses. The members of the Federal Council have the right to speak, but not to vote, in either house of the Federal Assembly, and also the right to make motions on the subject under consideration. Yet the members of the Council do not resign when the Assembly votes against them, but keep quietly on for the term of three years, which is all the more remarkable as they owe their election in the first place to the Assembly, and not to the people, as our Executive does.

As to the *referendum*, according to which, upon the demand of a certain number of citizens, any law must be submitted to a vote of the people, though Mr. Vincent advocates its introduction into this country, we do not believe it could be made to work successfully even in the States. It is quite alien to the habits of our people, and with the number of large cities, and the increasing proportion of the foreign element, the experiment, cumbrous as it is, would be too hazardous. But, on the other hand, we already have the *referendum*, only it applies to persons instead of particular laws. If the Swiss Executive had after three years to go back to the people for approval, having in the meantime been constantly held to public cross-examination and accountability, it is pretty safe to assume that no laws would be passed which the people would seriously disapprove.

There is a curious resemblance between the *Landesgemeinde*, as here described, and our New England town meeting; every item of business to be discussed has to be printed in a "memorial," precisely as in our town "warrant." As a reminder that Switzerland cannot be quoted as a rule for other countries, there is an elective judiciary which seems to work well.

Vorlesungen über die Algebra der Logik. Von Dr. Ernst Schröder. Leipzig: Teubner. 1890. Vol. I. Pp. 717.

THE Algebra of Logic has here received an admirable setting forth at the hands of Dr. Schröder. The book is doubtless too large and too diffuse, but it is chiefly intended for a German audience (the subject has been hitherto neglected in that country), and Germans are not frightened away by voluminous reading. The doctrine is almost uniformly sound, and, what is of chief consequence, the arguments in favor of admitting the subject among the branches of human learning are well calculated to convey conviction. The arguments which have been advanced on the other side have sometimes been of a very curious nature. For instance, Mr. Bradley, in his 'Principles of Logic,' scouts it because it does nothing for reasoning that is not syllogistic—for example, for such reasoning as this: A is north of B, B=C, therefore A is north of C. In the first place, it is not true that reasoning of this kind is not included in an Algebra of Logic. The formal definition of the primary copula is simply that it is transitive—that is, that it is subject to the single condition that when A stands in a certain relation to B, and B stands in that same relation (or a limiting case of it) to C, then A stands in that same relation to C. Any relation whatever which fulfils this condition is already included in the Algebra of the primary copula—the copula, that is, which represents, in the first instance, the words "all . . . are . . ."

But in the second place, even if the Algebra of Logic covered syllogism only, no one could doubt its value who had tried to perform without it the extremely complicated pieces of syllogistic reasoning which it can work out by purely mechanical processes. The fact that not many instances of reasoning of this sort can be got from real life shows nothing. As Dr. Schröder points out, it is not strange that this kind of reasoning was seldom attempted at a time when it was almost impossible of accomplishment. Mr. McColl has already made a useful application of the theory to the determination of the new limits of several integrals upon a change in the order of integration.

Dr. Schröder makes constant acknowledgment, in very graceful terms, to the work of Mr. Charles S. Peirce and his school. He rightly considers that Boole's contributions to the subject possess, at present, only an historical interest. He seems to us to attribute rather less value than is due to the method of Mr. O. H. Mitchell as described in the 'Studies in Logic by Members of the Johns Hopkins University.'

Dr. Schröder's book is the only one, in any language, in which the subject can be properly approached by one who takes it up for the first time. We learn that a Spanish logician has undertaken a translation of it. For an English-speaking public, a somewhat different presentation of the subject would be preferable.

Choses d'Amérique; Les Crises Économique et Religieuse aux États-Unis en 1890. Par Max Leclerc. Paris: Plon. 1891.

M. LECLERC has collected into a book a number of articles which he contributed last summer and autumn to the *Revue Bleue* and the *Journal des Débats*, of which he is one of the editors. They are superior in many respects to the current newspaper correspondence and to the usual productions of French travellers in this country, being written with greater intelligence, and being notably free from the ridiculous blunders in the spelling of English words and proper names which one expects as a matter of course in French books. The only exception to be noted is that McKinley is uniformly called MacKinley—a pardonable concession to the inability of Frenchmen to make head or tail of the abbreviated form.

Of course, it is not possible, during a sojourn of three or four months, mostly spent in hurried travelling, to obtain a thorough knowledge of any country, and it is not surprising that a book written under such circumstances should contain statements that Americans cannot endorse. It is to be said, in the author's favor, that he is accurate when he speaks of subjects concerning which correct information can be obtained from newspapers and from conversation with public men, and that if he falls into error, it is mainly when he treats of national traits, manners, and customs, and generally of matters which no one can safely generalize upon except after years of intimate intercourse with various classes of the people.

He writes very intelligently and discriminately concerning the election of 1890, although he seems to consider it a victory of the Farmers' Alliance, and attributes to that movement an exaggerated importance—an overestimate which was more excusable at the time he wrote than it would be now. On the other hand, when he treats of our domestic manners he passes his brush over the time-worn stencil-plate for which we are indebted to the combined imaginations of our foreign critics and our native humorists. To cite a single instance, he appears to regard the so-called personal column in certain newspapers as a tolerated method of obtaining acquaintances of the opposite sex among respectable people. Another misconception is the great influence which he attributes to the Catholic Church. To this he is no doubt led by a combination of the patriotic with the religious bias, to use the terminology of Herbert Spencer.

Perhaps the most interesting passages to American readers are those in which M. Leclerc suggests, with some detail, a method by which France might retaliate the vexatious provisions of the McKinley Administrative Bill, and, by touching the pockets of American farmers, bring about a repeal or modification of the offensive sections. He proposes that all exporters of American products, such as pork, lard, etc., should be required to go before French consuls to procure certificates of inspection, etc, for which a fee should be charged, and the same burdensome formalities should be imposed that we require of a French manufacturer who sells his wares to us. He argues that if some such course were pursued in the case of our cattle, petroleum, and other exports, our farmers and producers would receive an object-lesson in international comity which would open their eyes to the unfairness of our recent legislation, and bring about a change of policy.

Essays, Reviews, and Addresses. By James Martineau. Selected and revised by the author. II.—Ecclesiastical, Historical. Longmans, Green & Co.

THE second volume of Martineau's collected essays has an interest more personal to himself than the first. It brings out very clearly his unsectarian spirit, as marked as that of Channing, and which, like that of Channing, has often made him an object of suspicion and distrust to the sectarians of the Unitarian body. His grounds of sympathy with and distrust of this body come out clearest in two letters, "The Unitarian Position" and "Church Life or Sect Life?" He believes in no dogmatic basis of church union whatsoever, and would not be the minister of a church having a doctrinal name, nor belong to an association having any doctrinal limitation, though his private opinion is of the clearest Unitarian stamp. A very interesting and suggestive essay is that on "A Way Out of the Trinitarian Controversy." It is through the recognition that what Trinitarians worship as the Son, Unitarians worship as the Father. Several of the papers deal with the Established Church and its relations with the dissenting churches, and bring out the author's noble but impracticable dream of the National Church as a federal union of all the sects, independent of doctrinal agreement. In the preface there is a deep-drawn sigh that his "life-long conviction and intense aspiration has ceased to meet with any response, beyond a little unmeaning lip-homage of those who practically contradict it." It is evident that the trend of things is quite another way, towards no establishment whatever. Martineau's scheme, to which he has frequently returned, is extremely academic, and that of an

idealist who quite underrates the organic vitality of religious bodies.

There are two admirable studies of Charles Kingsley's writings, and that on his 'Alexandria and her Schools' will, let us hope, send some to it who did not know it in its day. There is incidental treatment of John Henry Newman's writings in several of the papers, while one is devoted entirely to his 'Difficulties of Anglicans.' That assault on Protestantism is fairly met, and the wide intelligence and knowledge of Martineau afford a striking contrast to the brilliant polemic of Newman, then whistling loud to keep his courage up in untried scenes.

A Dictionary of Classical Antiquities, Mythology, Religion, Literature, and Art. From the German of Dr. Oskar Seyffert. Revised and edited with additions by Henry Nettleship, A. M., and J. E. Sandys, Litt. D. London: Sonnenschein; New York: Macmillan & Co. 1891.

THIS is a work well fitted to do for schools and the lower classes in colleges what Smith's Dictionary of Antiquities does for more advanced students. The original is already in wide use in Germany, although it appeared only in 1882. Its particular merit is that, besides supplying articles on the subjects usually treated in a Dictionary of Antiquities, it contains also information on matters of Mythology and Literature, for which one generally goes to a Classical Dictionary. Thus the student finds all these topics treated in one easily handled volume of some 700 pages, excellently printed in large clear type on fine paper.

The English editors have not rested content with a mere translation into real English free from every trace of Germanisms. They have corrected (with the help of Dr. Seyffert) and enlarged the original as well. Among the entirely new or largely rewritten articles are those on Mosaics, Pigments, Vases (admirably treated, with seventeen illustrations), the Edict of Diocletian, the Law of Gortyna, and notices of artists and architects. It is in the direction of art that the book especially excels. This is seen also in the number and beauty of the illustrations, in which there is a great advance over the original. Together with the plans, they are generally selected from the best modern works, and in execution surpass anything which we have seen in an English book of this nature. The summaries of the history of Greek and Latin literature, as well as articles on the different authors and on religious matters, will be of particular usefulness.

In fact, teachers and students are nowadays getting to be so well supplied with manuals for the study of *Realien* that there is a danger that the reading of the ancient authors themselves will be restricted in the too great particularity of study bestowed upon some few of them. This would be a real misfortune; yet we see signs of it all about us in many "special researches" made by so-called advanced students in the regular college course and in graduate departments. With their reading confined to parts of certain authors that are ordinarily required for the A. B. degree, they set forth gayly upon some quest, as ignorant of the wide fields of literature that lie unvisited about them as was the Rev. Mr. Casaubon of the German investigations along the lines which he fondly deemed all his own. The work of individual research should not be discouraged, for nothing can sooner arouse the ambition of the young student, nor better train him in exactness and in critical acumen; but the vision must be broadened and the scope of the mind increased by the widest possible reading of the authors. The true way to scholarship was surely pointed out in the fifth of Ritschl's ten commandments—"*Du sollst lesen lernen.*"

But to return to our dictionary. The errors in such a work, as we lately remarked upon a similar occasion, will disclose themselves only slowly and in the course of use. In this book, besides the inexcusable lack of an index, that which will, perhaps, be most deplored by teachers is the omission to state with exactness the sources from which many of the pictures are taken. In the preface we read that as far as possible the original authority on which they rest has been stated in every case. But "Vase-painting" or "Pompeii" (*sic*) will not satisfy the teacher who wishes to get for himself or his pupil a more complete account of the subject treated than this book affords. It would have been easy to give the page of the work from which the illustration was actually taken, yet this is done in extremely few instances. In one of these, however, the statement of the source would throw doubt upon the value of the whole book, had we not ample evidence that generally modern works had supplied the illustrations. This is the plan of the temple enclosure at Eleusis (not in Seyffert's original), which is taken from the 'Unedited Antiquities of Attica,' a work published in 1817. Of course the plan is almost useless now. Baedeker's 'Greece' had supplied a better. But the editors are not often caught napping in this fashion, and even Aristotle's newly found treatise has been put into service. It is unfortunate that in this dictionary, as well as in the new Smith, the statement in the *Journal of Hellenic Studies* about the theatre of Megalopolis (already acknowledged to have been premature) has been accepted as gospel. The debate between the Old Stagers and the No Stagers, too, is not left open, as it certainly might have been with safety, but the No Stagers get small comfort in a footnote. Under "Drama," in the account of the costume of comedy, not a word is said about the σωμάτιον. A still stranger omission, in a somewhat full account of the law courts, is that of the ἀνάκρισις, that special peculiarity of Attic judicial procedure. Here also the description of the method of voting in court is defective. Under Persius, it is said that the so-called prŏlogue is omitted by Jahn in his latest edition. It stands in its ordinary place in the edition of 1868; in the revision by Bücheler since Jahn's death it is placed after the satires. For the lighting of the vestal fire by a burning *glass* there is no evidence whatever. A welcome feature and a task well performed is the marking of the quantities in Greek and Latin words throughout the book.

Popular Lectures and Addresses. By Sir William Thomson. Vol. III. Navigational Affairs. Macmillan & Co. 1891. 12mo.

THE first volume of this collection was noticed in this paper some time since, and is now followed by the third instead of the second, which is yet to appear. Though the subjects treated are not usually considered interesting, the work will be found very attractive to the educated general public, to yachtsmen on long voyages, and even to professional navigators. The first lecture embraces the general subject of navigation and the methods employed, both old and new. Of these last, the most important is what is known as Sumner's method of determining the place of a ship at sea, which we owe to the late Capt. Thomas B. Sumner of Boston, and which is now, we believe, in general use. Many interesting and valuable special contrivances for signalling are described, and the whole chapter is eminently readable and suggestive. This is followed by a chapter on the tides, giving a very clear account of the theories and methods of observation, and including an account of the machine known as the tide-predicter, contrived by Prof. James Thomson and Sir William Thomson, his brother. Five valuable appendices follow this lecture. The third lecture, with two appendices, embraces terrestrial magnetism. A paper on deep-sea soundings follows. Sir William Thomson gives in this the history of his invention of the steel-wire sounding apparatus which was rejected by the British Admiralty, but which has been brought in this country by Lieutenant-Commander Sigsbee to a great degree of perfection, and, in the form devised by him, was used in the voyage of the *Blake*. The curious reader will do well to peruse the chapter on this subject in Mr. Agassiz's beautiful work. Very interesting and instructive papers on Light-house Characteristics and on laying deep-sea cables follow. For yachtsmen and shipbuilders the chief attraction of the volume will probably be the lecture on Ship Waves, with which the work ends. Some parts of the book are too abstruse for readers not versed in the higher mathematics, who will probably say,

—"les mathématiques
Donnent des coliques";

but even these will find the greater part of the work well worthy study.

Elementary Text-Book of Botany, for the use of schools. By Edith Aitken, late scholar of Girton College, and certificated student in first-class honors of the University of Cambridge. Longmans, Green & Co. 1891. 8vo, pp. xi., 248.

THIS little book was written by a lady teacher who had sought in vain for a botanical text-book suited to the needs of her class. Professedly proceeding from the familiar to the unfamiliar, she has succeeded in developing the subject in a very attractive way—a way that will fairly entice the student to a closer and closer observation of nature as seen in common plants, and will lead the young disciple along a pleasant path to a very considerable knowledge of the science. After a few pages concerning the root, the stem, the leaf, the flower, and the fruit, she takes up the Scotch fir, and, with it as text, disposes of Gymnosperms in three pages. The wild hyacinth, the daffodil, an iris, an orchid, and meadow grass sufficiently explain the Monocotyledons. A buttercup, a poppy, a violet, and a few other common plants do the same for the Dicotyledons. Part second is a similar "description of some typical non-flowering plants, or cryptogams," leading the way from *Protococcus* and the yeast plant through several algæ up to a moss and a fern. Part third is a more minute description of the structure and physiology of flowering plants, beginning with fertilization and ending with the curious behavior of climbing, sensitive, or insectivorous plants, the whole interspersed with sufficiently explicit directions for practical work. A good teacher, with a small class of bright and willing students, would find not only profit but much pleasure in pursuing Miss Aitken's system for a season. The floral formulas which are given, such as K (5), C 5, A (5+5), G^1 for a pea-blossom, look rather mysterious, and do not seem to be explained in the book. But any good teacher could tell what they mean, and, once

understood, the pupil would try to find the formula for each new flower. The figures are mostly very good, though many of them are old acquaintances, as they needs must be, since the author modestly disclaims any pretensions to originality. The real originality is in the charming treatment of the whole subject, and in omitting much non-essential matter which one usually finds in so called elementary text-books.

Homes of Family Names in Great Britain. By Henry Brougham Guppy. London. 1890. 8vo, pp. 601.

NOTWITHSTANDING that this book has been moderately praised by the *Athenæum*, we cannot advise any American genealogist to buy it in the hope of deriving assistance from its pages. Mr. Guppy desired to investigate the local distribution of British surnames, and sought a short-cut to his end. Assuming that the farmers were the least migratory class of the population, he examined the Post-office Directory for the names of all farmers. Every name which was borne by more than 7-10 of 1 per cent. of the whole was taken into account. He then found that while each county possessed some special surnames, others were common to more counties, so that he made five classes of names—general names found in 30-40 counties; common names, 20–29 counties; regional names, 10–29 counties; district names, 4–9 counties; county names, 2–3 counties. But to a genealogist it is no news to be told that Smith is a common name in 40 counties, or Hobbs in 9; and of little assistance to find that Smiths abound in Gloucestershire more than in Devonshire. All the valuable results of this examination of the records of farmers could have been summed up in a magazine article, and would have even then been valuable simply as confirming what every one felt was the truth, without minute researches.

In respect to names peculiar to each county, this book is vague and misleading. The author tries to check off his "farmer" statistics by the well-known data concerning "gentle" families. He sprinkles in extracts from county histories without regard to date, and gives analogies which are absurd. The whole of this part of his performance is beneath criticism; and the fact that such work receives even moderate praise in London shows how much the study of local history there has declined since the death of John Gough Nichols.

Noctes Manilianae. Scripsit R. Ellis. Oxford: Clarendon Press; New York: Macmillan. 1891.

IT is only in the past two years that really scientific criticism of the author of the 'Astronomica' has been made possible by Thomas's collation of the oldest MS., the Gembloux, with Jacobi's edition. Jacobi believed that Vossianus 2 was the chief authority, while Bechert has endeavored to show that it is full of interpolations. Dr. Ellis takes issue with both, contending that the Vossianus is singularly free from corruption, but holding it inferior to the Gembloux, which he rates above all others. The 'Noctes' comprise some two hundred pages of emendations and notes, written in Latin, and everywhere marked by that soundness of reasoning and power of critical acumen which scholars have learned to expect from the English editor of Catullus. Some few of the notes have already appeared in the *Journal of Philology* and the *Classical Review*, but by far the greater part is new matter, of a most welcome kind, in a comparatively novel field. The volume, which is beautifully printed, contains also an essay on the much vexed question of the name of the author of the 'Astronomica,' and some notes on the 'Aratea' of Germanicus. Dr. Ellis believes in the traditional Manilius, and expresses the opinion that neither Cicero nor Avienus was as happy as Germanicus in rendering Aratus's poem.

Coast of Maine.
CAPE ROSIER.
The lands of the "Cape Rosier Associates" on Penobscot Bay, 50 miles nearer Boston and the West than Bar Harbor, Mt. Desert, are offered for sale in parcels of five and ten acres and upwards. These lands comprise over ten miles of almost continuous shore-frontage in one of the boldest and most beautiful sections on the coast, twelve hours' journey from Boston. They front upon fine harbors, have beautiful rocky shores, beaches, woods, and mountain views. The drives along the shores and among the hills are very varied and beautiful. New wharves have been built, and new connections with daily trains and steamboats established. In these lands is offered an exceptional opportunity to purchase for very small sums fine and perfectly protected seashore estates. The lands will not be sold for speculation or in small lots.

The American Revolution.
By JOHN FISKE. With Plans of Battles, and a new Steel Portrait of Washington from a miniature never before reproduced. 2 vols. crown 8vo, gilt top, $4.00.
"In these volumes Mr. Fiske covers a period of our history of the highest importance, and full of the greatest perplexity. . . . Mr. Fiske gives place to no historian in his power of presenting vividly a campaign or a battle, or in describing with graphic force an individual leader or statesman; but more than any other historian he has opened to us the heart of colonial and Revolutionary history, making clear the diverse conditions, the conflicting theories, and the underlying unity of spirit among the early peoples on this continent. . . . We are grateful to Mr. Fiske for having given this work so popular a quality."—The Christian Union.

Exhaustion.
HORSFORD'S ACID PHOSPHATE.
The phosphates of the system are consumed with every effort, and exhaustion usually indicates a lack of supply. The Acid Phosphate supplies the phosphates, thereby relieving exhaustion and increasing the capacity for labor. Pleasant to the taste.
Dr. A. N. KROUT, Van Wert, O., says: "Decidedly beneficial in nervous exhaustion."
Dr. S. T. NEWMAN, St. Louis, Mo., says: "A remedy of great service in many forms of exhaustion."
Descriptive pamphlet free.
Rumford Chemical Works, Providence, R. I.
Beware of Substitutes and Imitations.
CAUTION: Be sure the word "Horsford's" is printed on the label. All others are spurious. Never sold in bulk.

LIFE OF
Jane Welsh Carlyle.

By MRS. ALEXANDER IRELAND.
8vo, 330 pages. Portrait.

The publication of this book is a literary event. It is a remarkable biography of a wonderful woman, written and compiled from materials never before made public. The powerful side light it throws upon the life and character of Thomas Carlyle will make the volume indispensable to all who venerate the genius, or are interested in the personality, of the Sage of Chelsea.

Vellum cloth (half bound), gilt top, $1.75.

SCOTTISH REVIEW.—ORIGINAL Edition. $4.00 per year. LEONARD SCOTT PUB. CO., 231 Broadway, New York.

School Trustees,
Principals,
Teachers,

And others interested, are invited to consider the advantages offered by the *Nation* as an advertising medium. School advertisements are printed in a uniform typography, with the address in the first line, classification being made by States, alphabetically, unless especially ordered displayed on other pages.

The *Nation*, in its special field of political and literary criticism, is unlike any other periodical, American or foreign. At least 10,000 copies are circulated weekly, but these figures do not accurately represent the number of its readers. It is taken by reading-clubs and literary associations in a large number of places and may be found on file in every library of importance in the country. There are probably few weekly periodicals whose columns offer so favorable an opportunity for reaching an audience interested in educational matters.

Advertising rates, 15 cents a line each insertion, with the following discounts: 5 per cent. on four insertions, 10 per cent. on 8 insertions, 12½ per cent. on 13 insertions, 15 per cent. on 26 insertions, 20 per cent. on 39 insertions, 25 per cent. on 52 insertions.

The *Nation* is sent free while advertisement continues.

Orders may be forwarded through any responsible advertising agency, or directly to

HAS JUST PUBLISHED:

Russian Traits and Terrors.

By E. B. LANIN.

THIS work out-Kennans Kennan in its description of the atrocities practised by the Russian Government and includes an ode written by Swinburne inciting to the assassination of the Czar. The publication is particularly timely, now that the treatment of the Jews by Russia is so prominent a subject of discussion. All the assertions in the work are sustained by the most convincing documentary proofs.
Contents: I., Lying. II., Fatalism. III., Sloth. IV., Dishonesty. V., Russian Prisons: The Simple Truth. VI., Russia: An Ode. VII., Sexual Morality in Russia. VIII., The Jews in Russia. IX., Russian Finance: The Racking of the Peasantry. X., The Russian Censure.

In cloth, $1 00; in paper, 35 cents.

For sale by all booksellers, or mailed by publisher on receipt of price. MENTION THIS PAPER.

The Nation.

NEW YORK, THURSDAY, AUGUST 20, 1891.

The Week.

THE multiplying evidence of good crops at home and of a large foreign demand has at last made itself felt in the Stock Exchange. The principal, if not the only, cloud on the market during the past two or three months has been the apprehension of a change in the standard of value. Even that apprehension cannot overbalance the favorable outlook in the material world. It is never safe to make predictions as to the general course of the stock market or as to special parts of it. But it is as certain that the bulls will have their innings after a long depression as that the bears will have theirs after a protracted "boom." The "boom" in the grain market seems to have come very suddenly, like the outburst of a Yellowstone geyser, yet it ought not to surprise anybody. All the facts that are now known had been known weeks before. It only needed something unexpected to "touch off" the geyser. This was found in the Russian ukase against the exportation of rye. The ukase will not make the difference of one grain in the amount of food raised this year for human consumption, although it may prevent the most useful and economical distribution of what has been raised. But its effect upon the imaginations of men both here and abroad has been very great, and we may expect great fluctuations from this time onward, in which the stock market will share. It should be borne in mind, however, that there is a limit to the price that the Old World can pay for our surplus. Europe is far from being prosperous at the present time. The crisis of last autumn has not yet spent its force. Therefore the grain speculators who are jostling each other so fiercely in the wheat pits of New York, Chicago, and St. Louis, should beware lest they get loaded with grain which foreign countries cannot take off their hands at a profit to them.

The Secretary of the Treasury, in the numerous interviews that he allows to newspaper reporters, sometimes tells more than he ought to. He told a *Herald* reporter the other day that, in case a large amount of 4½ per cent. bonds should be presented for payment, he had more resources for meeting them than the public were aware of. Among these he mentioned the 5 per cent. redemption fund of the national banks, and the balances in the hands of disbursing officers. The 5 per cent. fund must not be confounded with the fund deposited by national banks going into liquidation, or retiring their circulation. It is a separate fund for the daily redemption of national bank notes, in gold or in greenbacks. It amounts to about $10,000,000. It is at least doubtful whether the Secretary has the right to use this money for any purpose except that for which it has been deposited. The law says that the amount so deposited by each bank "shall be counted as a part of its lawful reserve." The Secretary would have no right to lay his hands on any other part of a bank's lawful reserve; it is not easy to see how his rights in this particular are enhanced by the fact that one part of the bank's lawful reserve happens to be situated within his reach. Disbursing officers' balances are, however, quite within his discretion, and there is no doubt that, by curtailing and postponing here and there, the Secretary can meet these maturing bonds without much difficulty.

Mr. Theodore Roosevelt's report to the President upon the Civil-Service Commission's investigation of the doings of Republican Federal office-holders in primaries in Baltimore is a very valuable document, marked by its author's characteristic candor. There are several passages in it which will serve as definitions for those peculiar proceedings which are carried on under the general name of "politics" by the professionals of both parties in all parts of the country. The quarrel which he was investigating was between two factions of the Republican party, both claiming to be "loyal to the Administration," it being made plain by their testimony that "both sides use the term 'Administration' as merely synonymous with office-holders." On this point Mr. Roosevelt says:

> "As far as I could find out from the witnesses, there seemed to be no question of principle at stake at all, but one of offices merely. Seemingly, many regarded victory in the primaries as of more importance than victory at the polls, because the former gave control of the party machinery, and would, therefore, in their own language, entitle them to recognition in the distribution of patronage. Apparently they cared primarily for the offices, party success being purely a secondary consideration, important only because it facilitated getting them. It seems to me that this fact alone furnishes a tolerably accurate measure of the much-vaunted usefulness to any party of the office-mongering, office-seeking, and office-holding variety of ward worker."

That is a very accurate description of what is going on in this State at present, and fits the "Tom" Platt style of politics perfectly. Mr. Roosevelt says there was a "general feeling that whatever side had the majority of judges of election had the election," and that cheating in primaries was spoken of as being too universal and common to excite remark.

The comment which Mr. Roosevelt makes upon these frank confessions well deserves the prayerful consideration of President Harrison, and we hope will not fail to receive it:

> "This testimony has a certain value aside from its relation to the case in question, for undoubtedly the witnesses simply expressed in naked form what the average politician of the spoils variety believes. No greater service can be rendered the cause of decent government than to impress on the mind of the average citizen that such views as those expressed are those which are held by the great bulk of the people actively interested in opposing the cause of civil-service reform. Politics cannot possibly be put upon a healthy basis until this idea is absolutely eradicated. The ward worker who is simply in politics for the offices, is a curse to the community."

We agree with all that most sincerely, but we suggest that there is another way by which greater service can be rendered to the cause of decent government than by impressing the facts mentioned on the mind of the average citizen, and that is by so impressing them upon the mind of the average President that, after entering upon the duties of his office, he will keep the civil-service-reform pledges which he made before election. Mr. Roosevelt's report goes on to show that the spoilsmen have complete control of the Baltimore Post-office, and that the Postmaster makes no secret of managing his office in their interest. All that he says is true, and furnishes the most startling picture yet presented to the President of the fruits of his policy in violating his civil-service-reform pledges. What he has accomplished in Baltimore he is now seeking to accomplish in New York. Mr. Roosevelt has already done some service here in letting the light of publicity in upon the doings of our spoilsmen, and if Collector Fassett goes on as he has begun, the Commissioner will have abundant field for further usefulness in the near future.

It is clearly the intention of Mr. Fassett to leave no doubt in the public mind as to why he has been put by "Tom" Platt into the office of Collector. He had scarcely taken the oath of office before he left the city to take the leadership of the Platt faction in a party quarrel in Chemung County. He appeared there on Saturday, took the lead of the Platt forces in person, presided over their convention to elect delegates to the Republican State Convention, and had himself chosen to head the delegation. As the anti-Platt faction held a separate convention at the same time, and chose an anti-Platt delegation, Chemung County will present rival delegations, thus precipitating a factional wrangle in the State Convention with the Collector of the Port of New York as one of the leaders of the fray. On the other side the leaders are two Republican postmasters, one of Elmira and the other of Horseheads, so that the Republican State Convention is likely to have the edifying spectacle of a lively fight over spoils between two factions each under the leadership of Harrison appointees. We trust that in view of this singular proceeding the usual humbug about devotion to civil-service-reform principles will be omitted.

Last week the letter-carriers held a national convention at Detroit, Mich., and adopted a resolution calling for the extension of the Civil-Service Law to all free-delivery

cities of the country, instead of its being confined, as now, to the comparatively few offices which have fifty employees. This week the chiefs of fire departments throughout the country have been holding a national convention at Springfield, Mass., and the sentiment against the spoils system was equally pronounced. The President of the Association laid great stress upon the importance of keeping the fire department out of politics. "A politician," he said, "has no right in a fire department. To bring politics into a department is to destroy its usefulness. A man worthy to be a fireman must be educated in his business, and can't be a ward heeler at the same time." He mentioned the names of a number of worthy chiefs hanging by a thread on account of politics, and expressed his belief that such a condition of affairs was entirely unjust. These remarks were delivered with great earnestness, and were received with rounds of applause by his hearers.

The Attorney-General of Pennsylvania, Mr. Hensel, has served notice upon the Philadelphia newspapers which paid Bardsley a 40 per cent. commission on city advertising, that they must refund the amount to the State before September 1, or he will bring suit to recover it. One of the newspapers concerned, the *Inquirer*, is very indignant at the Attorney-General's conduct, calling it "bluff" and "buncombe," declaring that it is "nobody's business" what became of the money which the newspapers chose to pay as a bonus to Bardsley for the advertising, and expressing its belief that Mr. Hensel can never recover a cent of it. After this impressive deliverance the *Inquirer* goes on to say:

> "It seems that the commission paid found its way back to Bardsley without the knowledge of the papers. The incident only shows what a grasping individual this particular scoundrel was. He stopped at nothing to make a penny. But, for the benefit of all future Treasurers, the *Inquirer* wishes to remark right here that it proposes to halt this sort of business. It is not dependent upon official 'ads.' It will publish them like any other advertisements, but no commissions will be paid from this office, and it will make it pretty lively for any official or agent that seeks them from any newspaper in the future."

The pretence herein advanced that the newspapers in question had no suspicion that the 40 per cent. commission they were paying went to Bardsley is put forward, of course, in the hope of concealing from the public the fact that they were dividing with "this particular scoundrel" the profits of a raid on the city treasury.

Writing about Mr. Lowell's Americanism, in a cable message published in Sunday's *Tribune*, Mr. G. W. Smalley takes occasion to denounce in fitting terms the attacks which the *Tribune* made upon it a few years ago. These attacks, it will be remembered, were made at a time when the *Tribune* was courting the support of the Pat Ford or dynamite faction of the Irish voters for Mr. Blaine's candidacy. They began in January, 1888, and ran on through the summer. While they were in progress, Pat Ford was held up to public admiration as a man who was "essentially American in his views of all questions relating to his adopted country." One of the bitterest attacks was published on January 5, 1888, under the title of "Americanism," and another on April 15, after Mr. Lowell had delivered his address before the Reform Club on the subject of "The Independent in Politics." In order to show how perfectly Mr. Smalley's rebuke fits the *Tribune's* crime, we place it side by side with a passage from the article of the first-named date:

[G. W. Smalley in the *Tribune*, Aug. 16, 1891.]

His Americanism was the dominant passion of his life; that, and not poetry, nor letters, nor even those friendships and affections which were to him as the air he breathed.

There is no need of any private testimony to it, mine or another's. It is writ large throughout the record of the years he spent in England. It is stamped on every act he did as Minister, and was the warp on which was woven the web of all his English associations and sympathies. We all know how often, while he was Minister, the contrary was said. It was said sometimes ignorantly, often dishonestly, always either with some personal ill-will or with some political end to be compassed by the sayer. If I refer to those splenetic criticisms, it is mainly in order to express the hope that now, when they can no longer serve a selfish purpose, they may be forgotten, as he tried to forget them. Undoubtedly they gave him pain. So far the object of those who uttered them was accomplished. But none of them, nor all of them, ever caused him to swerve from the path he had traced for himself, the path of strict duty, which, while he was Minister, he followed patiently and loyally to the end.

[Editorial Article in the *Tribune*, Jan. 5, 1888.]

Americanism has remained unchanged since "Jonathan to John" and "Commemoration Ode" were written. Mr. Lowell, who was once saturated with its spirit, has gradually got out of touch with it. His protracted residence in England, the social attentions showered upon him there, his intimacy with titled people, the lavish compliments paid to his after-dinner speeches, and the prestige he has won in London as an Englishman who was accidentally born in the United States, but never really belonged there, has wrought a complete transformation of his Americanism. Even when he was Minister at the Court of St. James's he had shown indifference to the rights of Americans imprisoned abroad; and since the appointment of his successor he has become more and more English and less and less American in his opinions and tastes. So complete is the estrangement that he no longer feels at home in America. . . . What Americanism was in Mr. Lowell's best days it has remained. . . . This is Americanism of the highest type. Mr. Lowell no longer represents it; he has no faith in it, and has almost ceased to understand it.

A decision of much importance has just been rendered at Memphis by Judge Hammond of the United States Circuit Court, Judge Jackson concurring, the principal point involved being the interpretation of the phrase "due process of law" in the Fourteenth Amendment to the Constitution. As is well known, this phrase and the equivalent expression, "the law of the land," got into our constitutions owing to a popular misconception of their importance, but they have not been disregarded, although their interpretation has greatly perplexed the courts. The case decided by Judge Hammond was that of a Seventh-Day Adventist who was found guilty of committing a nuisance at common law by ploughing on Sunday. He sued out a writ of habeas corpus upon the ground that there was no law in Tennessee to justify his conviction, and that therefore he was deprived of his liberty without due process of law. In some very interesting *obiter dicta* Judge Hammond expresses the opinion that the prisoner was wrongfully convicted, reviewing Sunday legislation and the question of religious liberty at length; but he finds that the courts of the United States have no power to interfere in the matter. These courts, he says, are not tribunals that can review and reverse convictions in the State courts "that may be illegal in the sense that they are founded on an erroneous judgment as to what the statute or the common law of the State may be. If so, every conviction in the State courts would be reversible in the Federal courts where errors of law could be assigned." The principal ground, however, upon which Judge Hammond bases his decision is that the judges of a State are the depositaries of the common law of that State, just as the statute-book is the depository of the statute law; "and when they speak, the law is established and none can gainsay it." In this case, the verdict of the jury and the judgment of the court established by "due process of law" two things: one, that to work on Sunday was a nuisance according to the common law of Tennessee; the other, that the prisoner had worked on Sunday. The prisoner was therefore remanded, although Judge Hammond is entirely satisfied that there is no such common law as the Tennessee court declared. The opinion is carefully considered, and perhaps goes no further than the slaughter-house cases, but we should have been glad to have Judge Hammond state just what rights are secured by the Fourteenth Amendment, if it does not protect a citizen against being punished for violating a law which has no existence. As the case will be taken to the Supreme Court by the Seventh-Day Adventists, it is unnecessary to comment on it further at present, but the decision there will be awaited with much interest.

The confidential agent in this country of the Chilian Congressional party has just published an "Exposition" of the cause which he represents. We should think it well adapted to its object of securing sympathy from Americans for men who are struggling for what they sincerely believe are their rights and liberties. Quite unlike the frothy manifesto recently issued in Washington as the justification of Balmaceda, this pamphlet is remarkably restrained and dignified in tone, and vigorous in logic and fact more than in rhetoric. If it glides over the constitutional difficulties which undoubtedly exist in its own case, it sets forth with unsparing hand the utterly illegal and outrageous procedure of Balmaceda. Especially does it make clear, by the citation of documents proving his high-handed overriding of the election laws, how impossible it is for the Congressionalists to recognize for a moment the farcical elections of the so-called new Congress and the new President. The latter is but a weak tool in the hands of the Dictator, and there is no

prospect that the beginning of his term of office, September 18, will bring any relief to the unhappy country. This appeal of the Congressional party to the American love of liberty and legality ought to meet with a hearty response in private and in the press, even if it cannot do so, for the present, officially.

The speech of Sir William Harcourt at the dinner given by the National Liberal Club to Mr. Brand, the winner of the great victory at the Wisbech election, was naturally of a triumphant character. He was able, however, to demonstrate to his audience that exultation was thoroughly justifiable. He pointed out that since 1886 there had been 88 bye-elections of members of Parliament in Great Britain, exclusive of duplicates, the latest of which only were considered. So large a number is certainly sufficient to give a fair indication of popular feeling; moreover, its fairness could not be complained of by the Government, for they had deliberately made many of the vacancies. In 1886 the Unionists had 63 of these seats and the Liberals 25, a Unionist majority of 38. Of the 88 vacancies, the Liberals have won 20 seats and the Unionists 1, a net loss of 19 for the Unionists. Their majority has thus disappeared, and each party has 44 seats out of the 88. Sir W. Harcourt ironically asks if the Liberals win 19 seats out of 88 vacated, how many they will win out of the 479 which have not been vacated. He makes his calculations even more conclusive by comparing the seats contested in 1886 and at the bye-elections, which number 53. Of these in 1886, the Unionists held 35 and the Liberals 18. Now the Liberals hold 35 and the Unionists 18. In 1886 the Unionist votes numbered 167,000 and the Liberal 158,000. At the bye-elections the Unionists polled 179,000 votes and the Liberals polled 196,000—a change from a Unionist majority of 9,000 to a Liberal majority of 15,000. The conclusion is unavoidable that at the next general election the Liberal party will probably win a majority of the seats in Parliament.

Although there is some controversy as to the real amount of the French budget, it is admitted that it shows an improvement over previous years. The chief source of confusion is the "extra-budgetary" expenditure for various public works, which amounted in 1883 to the frightful sum of 834,000,000 francs. Some of the debt incurred in this way has been paid off, and the charges for the remainder have been to a great extent merged in the estimates for ordinary expenditure. The policy of large expenditure for public works has been perforce abandoned during the last two or three years, and the official reporter of the budget admits that a policy which, during profound peace, resulted in an increase of debt of nearly 650,000,000 francs in a single year, was manifestly dangerous. It is calculated that the debt will increase during 1892 by 180,000,000 francs, but it will at the same time be reduced through redemption by 68,000,000, leaving a net increase of only 112,000,000. This is a great gain, but it is to be remembered that it has been attained in part by increased taxation. The statement does not include the debts of the departments and communes, but, without computing them, the public debt amounts to 31½ milliards of francs. Within a few years some of this can be refunded at a lower rate of interest, which will diminish the burden, but, on the other hand, new expenses are continually arising. Thus, the law providing pensions for members of the civil service contemplated that the sums withheld from their salaries for this purpose should be accumulated as a reserve. But this has not been done, and, these officers now attaining in increased numbers the age when they can claim pensions, the charge upon the revenue is becoming serious. In 1868 this charge was only 14,000,000 francs more than what was retained from salaries, but in 1878 it was 23,000,000, in 1888 it was 30,000,000; and when the maximum is reached it will probably be 86,000,000. The insurance of workmen, if carried out, would be a terrible additional burden. With such a financial record, after twenty years of peace, it would seem impossible for France to go to war and remain solvent.

A St. Petersburg correspondent of the Berlin *Nation* calls attention to a new phase of Russian policy in respect to the building of railroads. The first railroad built in the empire—the Moscow and St. Petersburg Line—was constructed on the strictest principles of State ownership and control, as was also, in the beginning, the line to Warsaw and the Austrian frontier. But the enormous cost and unscientific nature of the railroad-building of the State led, in 1857, to the creation of a private corporation—the "Great Russian Railroad Company"—to which the State lines were leased, the Moscow road not until 1867, however. But this new system was not prosperous, for one reason and another, and the company's arrears of indebtedness to the Government swelled year by year. This state of things brought about a fresh attempt to solve the problem—namely, a sort of combination of the principles of State and private ownership. The returns to the Imperial Treasury from leased roads were set aside as a special fund for railroad purposes, and out of it the Government bought a certain amount of the stock of all new roads authorized to be built. This stock was retained by the Government, but upon the basis of it a special issue of "consolidated railroad bonds" was made, thus allying the financial interests of the Treasury with those of the companies. This plan was followed until about 1884, and under it a rapid expansion of the Russian railroad system was attained. Still, the credit of the Government was all the while being more and more involved, without a proportionate direction of the affairs of the roads being accorded it, and this fact, together with the general and increasing influence of State socialism in Europe, brought about a return to the old method of State control. The special fund for the purchase of railroad stock was abolished, the policy of granting charters to private corporations was abruptly checked, and the building of new lines strictly reserved to the Government. Thus the circle had been rounded to the starting-point. But things have not moved as expected during the last half-a-dozen years; more effort has been expended upon the "nationalization" of the existing private lines than upon the opening of new roads. Meanwhile, the great project of a Siberian line to the Pacific has been pressing upon the Government as a commercial and military necessity; the question was how to get the funds to build it. Rumors began to circulate that private capital would be called in; but it turns out, according to the correspondent mentioned, that the principle of State ownership is to be dropped in quite another way. The Government has decided to build the Siberian line, putting into it all available railroad funds in sight for ten years ahead; but, in order not to block entirely the building of other contemplated and needed roads, it has determined to turn them over to private corporations, to many of which charters have already been granted.

Germany is experiencing the depopulation of country districts for the building up of cities that is now so common a phenomenon in civilized nations. In her case, the process was longer delayed, but has made up for that by an accelerated speed. The returns of the census taken on the first of December, 1890, show that the great cities have gone on drawing into their maw the increase of the rural population. The cities above 100,000 inhabitants now number 27 in the whole empire—a greater number than that of any other country in Europe; and the entire gain in population during the past five years, 2,500,000, is accounted for in the growth of the cities, the country population having remained stationary or retrograded. According to the census of 1885, agricultural laborers formed 48 per cent. of the total population; in five years they fell to 42 per cent. This is not because of lack of work; German farmers, like American, are short-handed and eager to give employment—they are, in fact, importing laborers from Russia and Sweden, and a project for introducing Chinese labor has been seriously entertained by the landed proprietors of Mecklenburg. The attractive power of the city in Germany is due to about the same causes as those operative everywhere else; the unusually rapid industrial expansion of the empire has helped to make the movement to the cities unusually rapid. Something is undoubtedly to be attributed, also, to a cause not mentioned by German authorities—the influence of State Socialism. Of this the workingmen in the cities have reaped the greatest benefits, at the same time that they have escaped a good part of the weight of taxation resting upon agriculturists; naturally, therefore, the country laborer hastens to put himself in the way of enjoying city advantages.

PUBLICITY AND THE LOBBY.

THE first year's trial of the new anti-lobby law in Massachusetts has resulted in a larger measure of success than many of its well-wishers believed to be possible. It has demonstrated the value of publicity as a restraining and regulating force upon lobby evils, and this was the main purpose which its designers had in view. The law was the outcome of the scandals which were revealed in 1890, when the lobby's services in securing the passage of the West End Railway franchise were investigated. As it is the first effort made in this country to restrict lobby evils on lines somewhat similar to those which have been followed with such success in the British Parliament, the provisions of the law are worth recalling at this time.

The Sergeant-at-Arms of the Legislature is required to keep two legislative docket-books, one for the names of all persons employed as counsel before committees, and the other for the names of all agents employed in connection with any legislation affecting the pecuniary interests of any individual, association, or private or public corporation. Upon these books the names of each counsel or agent must be registered within one week of the date of his employment, together with his residence and occupation, the date of his employment and the length of time it is to continue, the special subject or subjects of legislation to which his employment relates, and the name and business address of his employer. Whenever additional subjects of legislation are assigned to an agent or counsel, they must be entered on the books in such manner that the entries opposite the name of each employer will show all the subjects of legislation in relation to which any counsel or agent is employed by him, and that entries opposite the names of each agent or counsel will show all the subjects of legislation with reference to which he is employed.

No person whose name is not registered is allowed to appear as counsel before any committee, or to act in any manner as agent in respect to any legislation, and no person, private or public corporation or association is permitted to employ any person as counsel or agent who is not so registered. Each register is closed at the end of the session, and new ones must be opened at the ensuing session. Within thirty days after adjournment, every person, private or public corporation or association, whose name appears on the register as having employed any counsel or agent, must render to the Secretary of the Commonwealth a "full, complete, and detailed statement, sworn to before a justice of the peace, . . . of all expenses paid or incurred . . . in connection with promoting or opposing in any manner, directly or indirectly," the passage of legislation defined in the act. Violation of any provision of the act is punishable by a fine of not less than $100 nor more than $1,000 for each offence, and any person seeking to act as counsel or agent contrary to its provisions is liable to the same penalties, and in addition will be disbarred from acting in such capacity for a period of three years from the date of conviction.

When the law was first put in operation, at the opening of the late session of the Legislature, the first effect noted was an unwillingness on the part of many professional lobbyists to have their names registered. The regular counsel of the railway companies and other corporations appeared as usual, but many of the agents of long standing, who represented nobody in particular, but were always ready to take a hand in any good job that offered, kept away from the State-house. This was an obvious reform, of no slight importance. Undoubtedly many of the agents thus driven from the State-house plied their trade in other localities, and invented new methods of corrupting legislation; nevertheless, they were put under great disadvantages, and were consequently less potent for evil than they were before.

The effect of enforced publicity upon the regularly employed and registered counsel was, as might have been anticipated, greatly to restrict expenditure and to moderate perceptibly the size of the fees paid. When the West End scandal was investigated, it was shown that something like $118,000 was spent in getting the franchise to the point at which a vote upon it was to be taken, and that by far the larger part of this sum was paid as counsel fees to eminent lawyers, some of which ran as high as $10,000 each. No fees of this size appear in the returns thus far filed. The lawyers receive the highest fees. These range from $1,000 to $8,500 for the best legal talent of Boston, and show that the legislative business is a very profitable one for many members of the Massachusetts bar. The regular agents, or professional lobbyists, do not appear by the returns to have had a very profitable session, the highest sum earned by any one of them being $2,050. Undoubtedly many of them evaded the law in one way or another, but the natural effect of the fear of publicity would be to restrict expenditures all along the line, employers no less than agents being afraid of compulsory exposure of all their operations.

Now that the first step has been taken successfully, it is not unlikely that the law may be amended in such a way as to make it more effective. The objective point should be the secret work of the lobbyists outside the precincts of the State-house. Everybody at all familiar with legislative methods knows that the most corrupting work of the lobby agents is in the hotels and other places over which the present law has no jurisdiction. There can be no radical reform till these now secret operations are made liable to publicity. Gov. Russell made a valuable suggestion on this point in his message to the Legislature in January last, when, in speaking of the law, he said:

> "Prevention by publicity is possible, and I would suggest for your consideration whether a remedy may not be found in this direction, by making it easier than it now is publicly to investigate the methods used and money spent on pending legislation, and also by giving power to some proper officer, before a measure finally becomes law, to demand under oath a full and detailed statement as to these matters. The fear of publicity, and through it of defeat, may stop improper practices by making them worse than useless."

The present law, by requiring publication after the adjournment of the Legislature, postpones the publicity till after the legislation has either been secured or defeated. Gov. Russell's proposal is, that it should be made possible to compel this publicity while legislation is pending, and thus have the wholesome fear of exposure hanging over every employer, agent, and legislator at every stage of a bill's progress. There can be no doubt that if it were known that, at any time during the consideration of a measure, every person interested in its success or defeat—counsel, agent, employer, or legislator—could be compelled to state under oath everything that he knew concerning efforts which had been made for or against it, this knowledge would have a most beneficial effect in checking corruption.

LOWELL THE PATRIOT.

To many of our readers the news of the death of James Russell Lowell has come like a physical blow. There was in his social speech and writing such an exuberance of personality, such a suggestion of treasures of wit and humor undrawn upon, as those who knew the man find it hard to connect with the thought of annihilation. But for the public his works remain. Had he lived, they might have been added to, but we are not deprived of them by his death. They have taken their place, perhaps among the classics of our race, certainly among the classics of our nation. They were among the first to answer the question, Who reads an American book? and their author's name will be among those repeated by posterity in answer to the question, What has America given to the world?

The present is not the time, nor is this the place, for a discriminating estimate of Mr. Lowell as a poet or as a man of letters. As we have said, his works in those capacities will be as much the possession of future generations as of our own. But we cannot forbear dwelling upon an aspect of his character that was to a certain extent independent of his literary gifts, and which was, therefore, peculiarly impressive to the men of his own day. He was in the loftiest sense of the word a patriot. The expression "the Father of his Country" is perhaps commonly used without any very clear apprehension of its meaning, but it is evident that the emotions of a Washington in looking upon the future of the nation whose leader he has been, are not unlike those felt by a father in contemplating the future of his son. Mr. Lowell's patriotism was imbued with a similar feeling. He loved his country; he rejoiced in her strength, in her greatness, in her progress, and in her promise. But it was in her strength when rightly used, in her greatness and progress in spiritual as well as in material things, in her promise of noble and honorable attainment, that he rejoiced. The maxim, "My country, right or wrong," was not to him a patriotic maxim, but the appeal of the dema-

gogue to that contemptible travesty of patriotism, the chauvinism of the mob.

Hence we find him at the time of the Mexican war—the time of that other maxim, "My country, however bounded"—putting forth all his wonderful powers in opposition to the policy of our Government. We were playing the part of a bully towards Mexico, and that, too, not for the aggrandizement of the nation, but for that of the slave power. That it was the duty of a patriot to support his country in such enterprises was not a part of Mr. Lowell's creed, and the "Biglow Papers," with their unrivalled wealth of sarcasm and common sense, of caustic contempt and playful humor, of appeals to reason and to conscience, were produced. It is a beautiful and honorable thing to die for one's country in a good cause; but it is not less noble to withstand her if the cause is bad. To do this is the part of the highest courage and of the purest patriotism.

The civil war showed that Mr. Lowell could guide and stimulate true patriotism with words as lofty and strong and wise as those with which he had repressed the false. Had the secession of the Southern States been peaceable, it might not have been easy to determine the duty of a patriot. But the wanton attack upon the flag of the Union left no room for doubt, and the righteousness of the cause stirred the profoundest depths of Mr. Lowell's heart and called forth the noblest efforts of his genius. There was no falseness or impurity in the notes of his song; it was always the spiritual, the ideal, that he exalted in patriotism. He cried "with clenched hands and passionate pain," but it was Truth that he exalted, in strife and bloodshed and death, Truth that our brothers found

> Where all may hope to find,
> Not in the ashes of the burnt-out mind,
> But beautiful, with danger's sweetness round her.
> Where faith made whole with deed
> Breathes its awakening breath
> Into the lifeless creed,
> They saw her, plumed and mailed,
> With sweet, stern face unveiled,
> And all-repaying eyes, look proud on them in death.

Thus he taught

> That death within the sulphurous hostile lines,
> In the mere wreck of nobly pitched designs,
> Plucks heart's-ease, and not rue.

Thus he sang, in words addressed to a brother poet,

> of faith to things unseen,
> Of freedom's birthright given to us in trust;
> And words of doughty cheer he spoke between,
> That made all earthly fortune seem as dust,
> Matched with that duty, old as Time and new,
> Of being brave and true.

And when it was all over, and the victory gloriously won, he expressed the mingled joy and sorrow of his countrymen, their chastened grief and grave exultation, in a triumphal hymn that was a very concentration of patriotism:

> Bow down, dear Land, for thou hast found release!
> Thy God, in these distempered days,
> Hath taught thee the sure wisdom of His ways,
> And through thine enemies hath wrought thy peace!
> Bow down in prayer and praise!
> No poorest in thy borders but may now
> Lift to the juster skies a man's enfranchised brow.
> O Beautiful! my Country! ours once more!
> Smoothing thy gold of war-dishevelled hair
> O'er such sweet brows as never other wore,
> And letting thy set lips,
> Freed from wrath's pale eclipse,
> The rosy edges of their smile lay bare,
> What words divine of lover or of poet
> Could tell our love and make thee know it,
> Among the Nations bright beyond compare?
> What were our lives without thee?
> What all our lives to save thee?
> We reck not what we gave thee;
> We will not dare to doubt thee,
> But ask whatever else, and we will dare!

It would be but a half-recognition of Mr. Lowell's patriotism did we connect it only with our wars. There came a time when the leaders of the nation that had poured forth its blood so generously for an idea fell to doubting if it would keep its promises to pay money, and when they were ready to drag the honor that had been so nobly exalted, through the mire of repudiation. Then again Mr. Lowell's voice rang out in scornful rebuke of this ignoble weakness:

> Poured our young martyrs their high-hearted blood
> That we might trample to congenial mud
> The soil with such a legacy sublimed?

And when his country once more turned from the path of dishonor, none of her children rejoiced more in her virtue. It was not from any love for controversy or captious criticism that his heart was fed with wrath, and that he felt that he must twist his

> little gift of words
> Into a scourge of rough and knotted cords
> Unmusical, that whistle as they swing
> To leave on shameless backs their purple sting.

He loved the pleasures of retreat, to dream "in happy commune with the untainted brooks," or by the fire that "whispered its domestic joy," where, "walled with books," he heard not "the world's unmeaning noise." Nor must it be denied that he loved "to sit, well-dined," with those in other lands as well as this that were congenial. But the "Puritan drop" would not be quiet in his veins when his country was threatened with disgrace, and he turned from no duty towards her because it was distasteful to himself. He could not love his country did he not loathe her shame;

> For never land long lease of empire won
> Whose sons sate silent when base deeds were done.

Once more Mr. Lowell was called upon to give proof of his patriotism, when the corrupt leaders of a degenerate party made the insolent claim that those who had acted with them for noble ends must follow them in their dirty struggle for the gains of office. To break with associations that had a sacredness far above that of ordinary party ties was a cruel requirement of duty; but the course of a patriot was clear, and Mr. Lowell did not falter. And as he had honored his country at home, so he brought honor to her abroad, for he could go nowhere that men did not think better of a country that could produce such men. It seems now as if our loss were irreparable. As we listen to the tawdry rant of pension-seeking mercenaries, and as the shadow of financial dishonor once more darkens our future, a feeling of despair comes over us at the dearth of counsels that are at once good and strong, at the loss of that "wider and wiser humanity" that was so finely compounded with enthusiasm into patriotism.

But such patriotism is not sterile, and he himself would have told us that in the time of our need the providence of God would raise us up leaders. In his own uplifting words—

> Why make we moan
> For loss that doth enrich us yet
> With upward yearnings of regret?
> Bleaker than unmossed stone
> Our lives were but for this immortal gain
> Of unstilled longing and inspiring pain!
> As thrills of long-hushed tone
> Live in the viol, so our souls grow fine
> With keen vibrations from the touch divine
> Of noble natures gone.

THE PRECAUTIONS AGAINST FAMINE IN RUSSIA AND INDIA.

The two great countries of Asia that are governed to some extent in accordance with European principles have both accepted a certain responsibility for the lives of their subjects. The native dynasties of India never undertook to provide for their people during times of famine. Such visitations were accepted as the act of God and as beyond human control. Nor was any different view of their duty at first accepted by their English successors. It was not until 1838 that the East India Company made the attempt to deal with famine on a great scale, and this attempt was not very successful. Another failure took place on the occasion of the famine in Orissa in 1866. It was in consequence of this failure that Lord Lawrence took the position that provision against such catastrophes should be thenceforth a part of the regular duties of the Government of India, and in 1877-78 the suffering from famine was at least mitigated by Government aid, although in Madras and Bombay this assistance was inadequate. Since then the problem has been more carefully studied, and it seems to be generally agreed that the regular cause of famine, the failure of the monsoon, may be foretold six months before it occurs, by ascertaining the amount of the snowfall in the Himalayas and Central Asia. With this the Government need no longer be taken by surprise, and can take its measures with such deliberation as to render them effective.

As to another difficulty in dealing with famine, the isolation of the affected districts, progress has also been made. In the famine of 1866, Orissa was, it was said, in the position of a ship at sea without provisions. It was reached by no railway, its rivers were unbridged, and its seaboard was almost unapproachable during the monsoon. The supplies of rice that the Government had bought for the suffering inhabitants could not be conveyed to them in time, and half a million of them are supposed to have perished from starvation. Since that time the necessity of constructing lines of railway as a safeguard against famine has been insisted upon as firmly as the necessity of protective lines for the military frontier. Much has been done in this direction, and much, too, in the construction of irrigation-works, with the result of bringing the problem into more manage able shape, although it is by no means yet solved. A famine fund has been gradually accumulated, and a famine code adopted, by which every officer knows what duties

he is expected to discharge in these emergencies. This year the Government, by prompt action in establishing relief works and distributing food, has prevented the outbreak of panic that in former years has been so disastrous by causing the drifting of population into congested masses, among which cholera and other epidemic diseases were sure to prevail.

But in no way has the Government of India done more to justify its control than in resisting the demand of the native papers that the exportation of grain should be stopped. As the correspondent of the *Times* says:

"In Oriental countries the first demand of the people on the outbreak of a famine is to put a stop to the exportation of grain. Each native State struggles to keep its store of food for itself. Each district, each town and village down to the pettiest hamlet, tries to retain its own hoard within its own boundary. An immediate dislocation of trade takes place, the natural distribution of the whole available food supply of the country is stopped, and when the distress waxes sore the granaries of the grain-merchants are broken open and plundered, or even burnt by the populace. The total food supply which, if equally distributed under the impulses of unrestricted trade, might have sufficed to keep the scarcity below the starvation point, ceases to be available for this purpose. Traffic in grain becomes dangerous, sometimes illicit; and while parts of the country go on consuming almost at their ordinary scale, in others prices leap at once to starvation rates, or food absolutely ceases to be procurable at any price whatsoever."

The outcry against exportation has this year been intensified by the high price attained by wheat in the European markets, which led to the shipping of an increased quantity from India. With a view to allaying the alarm that these exports had created, the Government published a statement showing that they amounted probably to not more than one-half of one per cent. of the food-grain produced in British India, including Burmah. This statement further shows that wheat is not an article that enters into the diet of the poor in India, and that by exporting it other articles of greater importance to their sustenance may be obtained in increased amounts. It is to be added that, secure from interference by Government, merchants may now make their arrangements to supply food in the places where they consider it will be most in demand, which they would not venture to do if they had to anticipate decrees that might result in their ruin.

If we turn to Russia, the contrast is not a favorable one. The prohibition of the export of rye can scarcely fail to do more harm indirectly than any enforced cheapness of that grain can do good. There are other measures, however, taken by the Government, for an account of which we are indebted to the *Économiste Français*, that are more beneficent. Legislation has long since been in effect looking towards the supply of grain during a famine, both for the support of the population and for seed. This legislation contemplates the establishment of magazines of grain, as well as the accumulation of money to be devoted to the purchase of grain. The former policy is preferred by the Government, and is exclusively adopted in certain regions. In villages, it is required to accumulate in a special repository for every male inhabitant one chetvert (about six bushels) of rye or wheat, and one-half a chetvert of oats or barley. Several villages are allowed to unite in providing a common granary on these terms. When the accumulation is allowed to be in money, it must be sufficient to purchase the prescribed amount of grain. In this way every village becomes a mutual-assurance society against famine.

Provision is also made for special taxation by provinces, to the extent of 0.48 kopecks for every male peasant, but this provision is not of an obligatory character. In addition there is a special fund at the disposal of the Minister of the Interior for the purchase of grain when the resources of the villages and provinces have been exhausted. Advances made from this fund bear interest at 3 per cent. only after three years. In some regions, as Siberia and Archangel, the Imperial Government itself establishes granaries. With a view to meeting the present emergency, the rates charged by the railways upon grain have been reduced by the Government, and the use of Government buildings for storage purposes has been permitted. It must be said that the reports from the governors of the provinces and the zemstvos do not indicate a very alarming dearth. Deficient harvests are anticipated in the provinces of the basin of the Volga, of the centre, of the East, and of Little Russia; but of the seventeen provinces affected the deficiency is serious in only seven, and these are surrounded by more fortunate regions. Still, these reports were rendered some time since, and the situation may have become more grave.

THE GERMAN GRAIN DUTIES.

Secretary Rusk is by no means the only statesman who appreciates the benefits of protection to the farmer. His predecessor is none other than Bismarck. From 1865 to 1879 Germany levied no duties on imported grain. In the latter year, however, the Chancellor, declaring that "a man cannot eat himself more than full," maintained, upon the basis of statistics which he has never consented to publish, that the German farmer, if properly protected, could produce enough grain for home consumption. A duty of one mark on a hundred kilogrammes of wheat or rye, and one-half mark on a hundred kilogrammes of barley, corn, or buckwheat, was settled upon as the proper degree of protection. In spite of the duty, the importation of each of these grains showed, from year to year, a large and steady increase. On February 20, 1885, the existing duties were accordingly multiplied by three. For a short time the imports decreased, but, before the middle of 1889, things settled back into their old way again; men were eating more than their fill, according to the Bismarckian statistics. The German legislators hit upon the same remedy which has since made the name of the Hon. William McKinley, jr., under various orthographic disguises, famous in all civilized languages. The way to prevent Fritz from overeating himself was simple—put the price of food out of his reach. On December 21, 1889, all the grain duties were again raised, and the rates on wheat and rye were screwed up to five marks per hundred kilogrammes, or thirty-three cents per bushel.

About the success of this policy from the point of view of the Imperial Treasury, there can be no doubt. In 1880 the grain duties yielded 14,450,000 marks, or 8.7 per cent. of the customs receipts; in 1889 they yielded 98,740,000 marks, or 27.4 per cent. Nor can there be any doubt as to the burden these taxes laid upon some one. But, of course, the champions of the tariff insist that the duties are paid by the foreigner, who is anxious to get possession of the German market. Are they? The most natural comparison for the wheat prices is between London and Berlin. In the years 1874-79, that is, while Germany had free trade in wheat, the average price in England was 2.6 cents per bushel higher than in Prussia. From 1880 to 1885, the Prussian price was 5.6 cents higher than the English. After the first advance in the duty, the Prussian price was in 1885-87, 15 cents; in 1888, 20.1 cents higher; after the second advance it was, in 1890, 30.2 cents higher. Wheat was, to be sure, cheaper in both countries in 1890 than in 1875–79; but in England the price had fallen 29.8 per cent., in Prussia but 6.9 per cent. For rye, the other chief bread grain, the fairest comparison is offered by the markets of Austria, where, as in Germany, rye is of far greater relative importance than in England. In the years 1880–84 rye was 10.9 cents per bushel higher in Prussia than in Budapest, in 1890 it was 30.6 cents higher. In Budapest the price had fallen 19.9 per cent., in Prussia it had risen 8.2 per cent. Evidently the German pays his own taxes. We are more fortunate—the British pay ours.

One effect of the grain duties has scarcely received the attention it deserves. Before they were imposed, Eastern Prussia exported its surplus grain by sea from Danzig and Stettin to Scandinavia and England, while the industrial districts of Westphalia and South Germany supplied their needs from Russia and Austria. But the relatively high domestic prices caused by the German tariff prevented London from buying in Stettin, just as effectually as the tariff itself prevented Munich from buying in Budapest, and the East Prussian producers were forced to send their surplus by rail to the West and South. One result was that while the railway tonnage in foreign trade rose between 1884 and 1889 but 7 per cent. (from 1,151,000 to 1,232,000 tons), the tonnage in inland trade rose nearly 22 per cent. (from 4,312,000 to 5,420,000 tons)—a fact which at once both accounts for the recent financial surplus of the Prussian State railways, and shows that the finance minister cannot reckon on the permanency of that income. A second result was, that while the price of wheat in Stettin has sunk, since 1874–79, some 2.5 per cent., the price in Munich has risen more than 3 per cent.—a fact which shows that the railway surplus is due to needless hauling of freight which would naturally have gone elsewhere by water.

But the German protectionist has more than one (short) string to his bow. Granted

that the German laborer pays more for black bread than the English laborer for white, still the German farmer has the benefit of protection. The complaints from the farms are, to be sure, as loud as ever, but, says the German protectionist, "if it were not for the grain tariff they would be louder still." What would be is difficult to determine. Let us turn our attention to what is. The number of hectares devoted to wheat, rye, oats, and barley in Germany has increased less than 1.2 per cent. under ten years of protection (from 13,508,000 hectares in 1878 to 13,688,000 hectares in 1888). Rent outside the cities has fallen decidedly. When the tariff was imposed, the agricultural classes expected great results, and promptly discounted their rosy future by bidding up the rents. Although they soon discovered their mistake, still they indulged themselves again, when the tariff was first raised (1885), in the same unfounded hopes. The relation of the new rents offered for Prussian public lands in the seven eastern provinces, *i. e.*, in the chief agricultural district, to the expiring rents of the same parcels was, to 100, in the year 1878 as 138, in 1879 as 155.5, in 1882 as 105.9, in 1885 as 122.9, in 1886 as 107.8, in 1887 as 89.6, in 1888 as 82, in 1889 as 78.9. As might have been expected under such circumstances, the indebtedness of farm-owners has increased and foreclosures have become frequent.

Such are the advantages to agriculture which, in Chancellor Caprivi's opinion, warrant the retention of a tax of 30 per cent. on bread. In his speech of June 1 he prophesied that Germany and Austria would have average crops, central and southern Russia a better harvest than had been hitherto expected, India and America a large surplus. He, like his predecessor, had statistics which he did not make public, and these statistics proved that there was no distress, or prospect of distress, in Germany. The Government accordingly declined to move the desired suspension of the grain duties. Suspension, however, is not what is needed, but repeal. Since the adjournment of the Reichstag it has become clear that Chancellor Caprivi's private statistics must have contained some mistakes. The prices of grain and of bread have risen. A bushel of potatoes costs three times as much as it did a year ago. Germany has not an average harvest. Complaints have grown louder. The Socialists and the Freisinnige have always opposed the grain duties, but other classes are being aroused. Especially are manufacturers for the export trade alarmed at the prospect of wages as high, on account of the bread prices, as are paid in England; for the individual superiority of the English workman is undisputed. The comic papers are full of cartoons directed against the grain duties. In the cities, the agitation for their repeal is undoubtedly popular, and has been powerfully reinforced by the imminent distress growing out of Russia's prohibition of the export of rye. Russia is the principal source of German imports, having furnished last year 53 per cent. of the wheat and 81 per cent. of the rye.

OUR FEDERAL JUDICIAL ESTABLISHMENT.—I.

THE Department of Justice has just issued a new Register (the ninth edition), corrected to January 1, 1891. From it may be gathered information about the Federal Judiciary that is generally interesting, and of some especial value at this time, when there is about to be organized a new Court of Appeals in each of the nine judicial circuits into which the forty-four States are grouped. The Circuit is not the unit of organization, as is sometimes erroneously supposed, but the District. These circuits are not groups of States, each making, territorially or otherwise, a jurisdictional unit, but a merely convenient association of States which will, for the first time, when the new act of Congress goes into effect, have a territorial unity of jurisdiction; but this only in respect of appeals from the several districts. As to all original cognizance, the unit of organization and jurisdiction remains, as before, the District, which is, perhaps, indispensable under the Constitution. There is still, and always must be, in each District a court of original cognizance having no wider territorial expansion than the District itself, whether it includes the whole State or only a part of a State. It would, in this relation, be impossible to overleap the State lines in the construction of "districts" or "circuits"—absolutely so as to some branches of the Federal judicial power, and practically so, perhaps, as to all.

Now, quite absurdly, some may think, there are two such courts in each of these "districts"; but it is probable, since the ice has been once broken and the fixity of organization which has so long resisted all efforts for reform has been somewhat disturbed by the new act, that this absurdity will, at no distant date, be corrected by a consolidation of the two unnecessary courts (the Circuit and District courts) into one; this one court of original cognizance to be held by a single judge whose judgment shall be, in all things, reviewable on appeal in the new Court of Appeals, in place of the present two courts, either of which may be held by any one of four judges sitting in one or the other, and one of which, it may happen, by any two of these four judges—all reviewable, according to circumstances, in one or another of two courts of appeal. This duality of courts, with its intermixture of judges of varying rank and sometimes ill-considered and unimportant differences of judicial power, is a strange outgrowth, historically interesting, but too complex for treatment here. Not more than one in a hundred of our lawyers, even, comprehends the exact technical relation of these courts, and the judges who may hold them, to each other; and the new act complicates their relation to the ordinary understanding.

There are sixty-seven of these integral districts in the forty-four States, very unevenly distributed, as can be seen by looking over the new Register. Four States (Alabama, New York, Tennessee, and Texas) have three each; fifteen States (Arkansas, California, Florida, Georgia, Illinois, Iowa, Louisiana, Michigan, Mississippi, Missouri, North Carolina, Ohio, Pennsylvania, Virginia, and Wisconsin) have two each; all the others have one each, there being twenty-five of these. Taken by population, the distribution of these units of judicial organization would seem to be quite arbitrary and without any system at all, unlike the more evenly distributed representation in Congress; but if we consider the States as necessary units of political territory, the distribution appears more reasonable, though it will still be found that the apportionment of districts is without any system or much symmetry of construction. Massachusetts, with over two and a quarter millions of population, has only one district, while Alabama, with a little more than one and one-half millions, has three. Indiana, with over two millions, and Kentucky, with nearly two millions, have only one district each, while Texas, with over two millions, and Tennessee, with nearly two millions, have three districts each. Kansas, Minnesota, New Jersey, Nebraska, Maryland, and South Carolina all get along with one district for more than a million of population each, but Arkansas, California, Louisiana, Mississippi, North Carolina, Virginia, and Wisconsin, with a substantially equal population, must have two each, and Florida, with less than half a million, must also have two districts; and yet Georgia and Iowa, with about two millions each, Michigan and Missouri, with over two millions each, Illinois and Ohio, with nearly four millions each, and Pennsylvania, with over five millions, have only two districts each. The scantily peopled States, like Colorado, Delaware, Idaho, Montana, Nevada, New Hampshire, North Dakota, Oregon, Rhode Island, South Dakota, Vermont, Washington, and Wyoming, could not have less than one each, although each of them is far below the average of population for the districts as now constituted.

This great irregularity of distribution of judicial districts shows how the subject would fare if Congress were left so to distribute our representation in Congress, instead of being bound by the rule of equality prescribed by the Constitution; and it may be worth considering whether a similar Constitutional requirement of equality would not have been as wise in the one case as the other. However, the territorial conformation and size of the States may, in some measure, account for the inequality. Again, although there are sixty-seven districts, there are only sixty-four judges, because in Alabama and Tennessee, each, there are three districts, but only two judges, and in Mississippi there are two districts and only one judge.

There is much incongruity in the times and places of holding the two courts in each District, and more in the matter of distributing the jurisdiction between these places. In some districts the structural entity of the District remains unaffected in fact, as it always is in technical law, and the business is distributed among the places of holding court sometimes by one method and sometimes by another; but in others the District is subdivided territorially into divisions, and the demarcation of the jurisdiction is as rigid as if there were separate districts. Yet there is a want of uniformity here, even in the same State. In Delaware, Idaho, Maryland, Massachusetts, Montana, Nevada, New Jersey, Oregon, and Wyoming both courts are held at only one place for the entire State, but in Texas it takes eleven places to accommodate them. Some of the most insignificant districts—insignificant as to size and business—have the most places for holding the courts. The good nature of Congress, coupled with a mutual exchange of benefits, well understood if not confessed, permits this multiplication of places for holding courts; indeed, to a large extent, it is mainly used as a lever with which to prize out of the Treasury an appropriation for a public building. It is rarely in the interest of the public service, as any one may see who compares the districts in population, importance of trade and commerce, accumulated wealth, and amount of litigation done in each. Localities like New York, Chicago, and proba-

bly a very few other cities need more judges than they have, but other localities are supplied with far more judges and courts than are needed. The total force is out of all proportion, apparently, to the total needs, but is so unevenly and incongruously distributed as to districts and judges that the service is seemingly inadequate. Take the six newest States, with a population in the aggregate of only 1,038,000, and they have six judges. Such States as Oregon, Colorado, and Nevada might be added here, and if we contrast their population and business importance with that of the central States, the superabundance of their aggregate judicial force becomes apparent; and yet each has two courts, and, altogether, twelve judges, counting the Supreme and Circuit judges. Territorial expanse is an important factor, no doubt, but in the day of railroads and telegraphs it is not the sole nor the most important consideration, by any means, in determining the distribution of the judicial force in a system like ours.

This same unevenness of distribution—the having many judges where few are needed and few judges where more are needed—is just as apparent when we consider such States as Delaware, Florida, Maine, New Hampshire, Rhode Island, Vermont, and perhaps others, and contrast them with the great States of large population, wealth, and law business. Distribution by population is not a perfect test, but it affords a sufficient test to show the waste of force and energy in the judicial department of our system, State and Federal. There can be no doubt that if the actual work done in each district could be readily compared, the disparity in distribution would be just as glaring. The judicial forces of the United States, State and Federal, are so enormous in the aggregation that it is a matter of amazement that the work is so far behind, and the dockets, almost everywhere, delayed If the productive energy of the force at work could be concentrated, and comparatively idle judges put to work, the assertion might be ventured that one-half or less than the number of judges now employed would suffice. Territorial expansiveness and local requirements cannot excuse all of this waste, and much of it must be credited to the greed of the politicians, who multiply these desirable offices, as they do others, in a civil-service system where office-holding seems to be the chief end of man—so far as he is a public man—and the main reliance of statesmen as appliances of cohesion in party organization and work.

This waste of judicial force is nowhere more profuse than in the Federal establishment, and more particularly appears when it is further considered in connection with the distribution of the jurisdiction over subjects of litigation, as it has been made between the Circuit and District courts, and now also as between the Supreme Court and the Court of Appeals by the recent act of Congress. One has only to observe what meagre jurisdiction has been left exclusively and distinctively to the District courts to see that, as regards *that* jurisdiction, there is scarcely any need for them or any of their judges, and then to reflect that about four-fifths of all the judges are District judges and that, in most of the districts, cases under this exclusive jurisdiction cannot arise and are almost unknown, to see how this waste has been carried on, almost unconsciously, since but little attention has been given to it.

Whenever Congress shall spare the time for really beneficial and intelligent reforms, and we can have other than those hasty and ill-digested acts of legislation which bear "the fatal date of March 3," as one of the judges, at one time himself a Congressman, has styled it, we may hope for a more suitable organization of the courts, in accordance with the work to be done, even though we be compelled to depart from the antiquated and long since obsolete models of two centuries ago. This dispersion instead of concentration of energy exhibits itself in other respects also, as where the Supreme judges are required to visit the districts and work in the Circuit courts and the new Court of Appeals, which may be called the Jurisdiction of Visitation. Necessarily this visitorial jurisdiction, in its actual exercise, and the similar visits of the Circuit judges, must be confined to the pleasant places, and the outlying and remote districts can have none of the supposed benefits that belong to them. Much might be said of this process of diffusion and scattering of work, as it affects the practice of the courts and demoralizes it injuriously to bench and bar in some very important particulars; but it is enough now barely to mention it as a vice fundamental to all the legislation of Congress in reference to the Federal courts.

The Register of the Department of Justice, unlike the Congressional Directory, does not give biographical information concerning the judges, which is a defect of the publication. They are the only permanent officials known to our system of government, and, while never conspicuous in politics, they are influential actors in the business of government, about whom the public would like to know something more than we have here; and there is no reason why future editions of the Register should not contain a skeleton of useful and convenient biographical facts as to each judge. The place of residence, date of commission, and place of birth are given, however, and from these meagre facts considerable interesting information may be gleaned.

In all there are eighty-three judges exercising the Federal jurisdiction in divers places, and the nine new Circuit judges will make the number ninety-two. Every one of these is competent to sit in the Circuit courts and in the new Courts of Appeal, and any one of them, under certain circumstances, might sit in a District court. Under the powers given the Chief Justice and the Circuit judges to designate judges for outside service, in emergencies, any one of the sixty-four District judges may exercise Circuit and District court jurisdiction anywhere within each Circuit or within the United States, and the Supreme judges may be by that court assigned to circuits at will; but the Circuit judges are not assignable outside of their circuits, which is an incongruity in legislation full of such oddities.

Of the nine Supreme judges, only three exercise their Circuit jurisdiction in circuits including the place of their birth, viz., Gray, Blatchford, and Lamar; but of the ten Circuit judges seven have their native heath within their judicial power, viz., Colt, Wallace, Lacombe, Acheson, Bond, Jackson, and Gresham; and three, Pardee, Caldwell, and Sawyer, do not. Of the District judges, sixty-four in number, only twenty-five were born within their districts. Eleven were born in New York, five in Ohio and Virginia, each; four in Massachusetts, Pennsylvania, and Tennessee, each; two in Maryland, North Carolina, Vermont, New Hampshire, Mississippi, Kentucky, Georgia, Maine, and Delaware, each; one in Connecticut, Illinois, Texas, Rhode Island, South Carolina, Alabama, Missouri, New Jersey, Wisconsin, Iowa, Indiana, and Michigan, each; and one is foreign-born. Louisiana, Arkansas, Florida, California, Minnesota, Oregon, Kansas, West Virginia, Nevada, Nebraska, Colorado, North Dakota, Montana, Washington, Idaho, and Wyoming have none of them any representative by birth upon the Federal bench. Of the States admitted into the Union within the last fifty years, only Texas has a native judge, if that be not a mistake in the record; of all that were admitted within the century since new States were first admitted, only Alabama, Kentucky, Maine, Michigan, Missouri, Ohio, Tennessee, and Texas have a judge born within his jurisdiction. But all this applies to the bare fact of birth, which, in this connection, may be quite in the nature of an accident, as in the case of Mr. Justice Brewer, who is put down as having been born in Asia Minor, and yet is not, in any sense, an Arab or a Turk; or Mr. District Judge Bruce of Alabama, who, born in Scotland, was bred in Iowa.

MARBOT IN PORTUGAL.

PARIS, August 6, 1891.

WE left Marbot starting for Spain. He had a presentiment that the next campaign would be a very hard one. As soon as he had crossed the Bidassoa he felt that all security was gone; he was a bearer of despatches, and was escorted by gendarmes; he found on his way the corpse of an officer who was a bearer of despatches from King Joseph to the Emperor—the famous Mina was in the neighborhood. He arrived safely, however, at Miranda on the Ebro; but in the plains of Old Castile he was attacked by guerrillas, whom he repulsed successfully.

He found Junot at Valladolid, in the old palace built by Charles V. Junot kept a sort of court with his wife, the Duchess of Abrantes. Some difficulties arose from the fact that Junot offered a part of the palace to Masséna, ignoring the fact that Masséna always travelled, even in war times, with a Mme. X. Marbot does not give her name. "Masséna," he says, "of a sombre and misanthropic character, living alone by preference in his own room, away from his staff, needed for distraction from his gloomy thoughts the conversation of a lively and clever person. Mme. X. suited him perfectly, as she was a talented woman, good and amiable." But it was impossible that the Duchess of Abrantes, issued from the Comnenus family, a very proud person, should live under the same roof with this Mme. X. Marbot had hardly had time to explain the situation to Junot when Masséna arrived. He entered the palace hand in hand with Mme. X Junot arrived with the Duchess, kissed Mme. X.'s hand, and presented her to his wife. These little incidents seem trifling; they had great consequences. The Marshal never forgave Junot for not having given him the whole of the palace. Junot took sides with Marshal Ney and Gen. Reynier, who commanded two other corps in Portugal. These dissensions contributed much to the bad result of the campaigns of 1810 and 1811, which had an immense influence on the destinies of the French Empire.

The English had undertaken to defend Portugal, and this gave much importance to the fortress on the frontier, Ciudad Rodrigo. Masséna besieged it, and it was taken by storm. Marbot fell ill during this siege; a high fever had seized him; he became delirious and was very near dying. The fortress of Almeida was blown up by the explosion of a powder magazine; Marbot became convalescent, and his strength was re-established at the fort of Concepcion. While Marshal Ney kept down the Asturias and Leon, Marshal Soult was preparing to invade Portugal. He occu-

pied Chaves and Braga, and laid siege to Oporto. Marbot thinks that 10,000 Portuguese were killed at the storming of Oporto. Soult had now a good base of operations. The Portuguese could not forgive their Prince Regent, chief of the House of Braganza, for having fled and transported the seat of Government to America. Unwilling that Portugal should become a dependency of Brazil or Spain, some of them proposed to Marshal Soult to place himself at their head and to form an independent government.

"Soult did not discourage their project; he appointed functionaries, he raised a Portuguese legion of 5,000 men, and behaved with so much tact that in less than fifteen days the cities of Oporto and Braga, as well as those of all the provinces conquered by him, sent him addresses signed by more than thirty thousand individuals belonging to the nobility, the clergy, and the third estate, expressing their adhesion to the new order of things. The Duke of Rovigo, in the memoirs which he published during the Restoration, asserts that Soult rejected these proposals; however, a great number of the French officers who were then at Oporto, particularly Gens. Delaborde, Mermet, Thomières, Merle, Loison, and Foy, have assured me that at certain receptions the Portuguese gave to Soult the titles of King and Majesty, which he accepted with much dignity."

Napoleon, it seems, was always silent on this subject, even at Saint Helena; he could not much have wondered if Soult had thought of making himself king. But circumstances soon gave another turn to the preoccupations of Soult. The troops of Sir Arthur Wellesley and of Lord Beresford were approaching; they crossed the Douro and took Oporto by surprise. Soult was obliged to effect his retreat by the mountains, and thus ended the second invasion of Portugal by the French. Soult lost 6,000 of the best soldiers of France; he had fifty-eight pieces of artillery, but he could bring only one to the other side of the mountains. He showed much firmness during his retreat, and conducted his troops to Zamora, after having in vain tried to persuade Ney to unite with him and make a new invasion of Portugal.

Towards the end of 1809, all the French corps in Spain, while they were under the nominal command of King Joseph, were actually directed by Marshal Soult, who was Major-General. Marbot was with Masséna when he entered Portugal. "The whole army knew that Masséna had brought Mme. X. with him; but this lady, who had quietly crossed Spain in a carriage and had remained at Salamanca during the sieges of Rodrigo and Almeida, wished to follow Masséna on horseback when he came to a country impracticable for carriages." Masséna forced her company on his lieutenants. One day, "Masséna said loudly to Ney: 'My dear Marshal, pray give your hand to Madame.' Marshal Ney turned pale, and was on the point of bursting out. . . . He contained himself, however, and, with the tips of his fingers, conducted Mme. X. to the table, where, by Masséna's directions, she placed herself on his right. But, during the whole repast, Marshal Ney never spoke to her, and conversed with Montbrun, his neighbor on the left. Mme. X., who understood how false her situation was, was seized with a violent nervous attack and fainted away." From that day there was great coldness between Masséna and not only Ney, but Reynier, Montbrun, and Junot, with a most unfortunate effect on the military operations.

A campaign undertaken at such a distance from France, in a country unknown to the French, where all communications were difficult, could not end well. Marbot is very severe on Masséna, blaming his inactivity and his indecision. He describes with many details the battle in the Sierra de Alcoba, one of the greatest disasters which a French army ever had to suffer—the battle of Busaco. Though he much admires Wellington, he criticises him on some points. Masséna, having crossed the Alcoba Mountains, arrived on the plains and marched on Coimbra. The large population of this town, kept in complete security by the assurances of the English, received an order to leave. It was an awful spectacle. The army of Wellington, embarrassed by thousands of runaways—men, women, monks, nuns, soldiers—had to retire in great disorder on Pombal. The occasion was fine for Masséna, but he did not seize it and lost much time, and Wellington entered his famous lines of Torres Vedras, which formed round Lisbon an immense curve, twenty leagues long. Marbot is of opinion that the lines could have been forced directly; fifteen days afterwards they had been made impregnable.

Masséna, unable to force the English lines, retired on the 13th of November from the barren hills where his army could no longer subsist. He fixed his headquarters at Torres Novas. The English pursued him with some hesitation, and Wellington established his headquarters at Cartaxo, near Santarem; the two armies, separated by the Rio Maior, remained facing each other from November, 1810, till March, 1811. During all this time the English received provisions by the Tagus; as for the French Army, it is almost incomprehensible how it lived. Each regiment had to organize the *maraude* on a large scale, and our soldiers were soon reduced to leading the life of the *routiers* and *malandrins* of the Middle Ages. A sergeant, in desperation, took a hundred soldiers and established himself in a convent, where he lived by plunder. He had himself called Marshal Chaudron; Masséna ordered him to be shot, with the few deserters who were with him. The retreat of the French Army began on the 6th of March; the movements had been kept so secret and were executed with so much order that the English were only aware the day after that the French were retreating. Wellington followed them with caution. Ney was with the rear guard, and fought valiantly, as usual. Masséna conducted his retreat with much ability, and such a retreat is one of the most difficult operations of war. He never lost sight, however, of Mme. X., and she was exposed to real dangers. She was finally carried in the arms of some grenadiers. Masséna himself said: "What a mistake I made in taking a woman with me to war."

Marbot was wounded, on the retreat, in a single combat which he had with a young Englishman. "Attendez, Monsieur le Français, je veux faire un peu bataille avec vous." Marbot, who was carrying an order, did not stop at first, but the young Englishman told him that he saw by his uniform that he was attached to a Marshal of France, and that he would have it published in the London papers that his mere presence had put to flight a cowardly aide-de-camp of Masséna or of Ney. Marbot, becoming angry, drew his sword, when two English hussars came to cut off his retreat. He flew at the Englishman and forced his sword through his neck. The two hussars fell on him; he killed one, the other fled; he himself had been wounded in the side, and had lost much blood by the time he rejoined Masséna and told his tale. Marbot always preserved his shako and his cartridge-box, which the two hussars had covered with sabre-cuts.

It would be difficult to give an account of the complicated movements of Masséna's army when it had to leave Portugal definitively. The French had entered the kingdom with 60,000 men; 10,000 were missing when they returned to Spain. The generals were divided, and quarrelled with each other, as is always the case when an army ceases to be victorious. The orders came from Paris, but when they arrived, they were no longer in harmony with the situation. The battle of Fuentes de Onore gave Masséna an opportunity for making a fine military movement, but it was lost by the fault of Bessières, who remained inactive. Masséna could not save Almeida, which was besieged by the English, but he found means of entering into communication with the garrison and of aiding its escape, as well as of destroying the fortifications. Gen. Brénier, who was in the town, made his retreat, and a loud explosion informed Masséna that Almeida had ceased to exist as a fortified post. Masséna retreated on Ciudad Rodrigo; the English did not follow him. Only afterwards did the French know that Wellington, exasperated with Gen. Campbell, whom he accused of not having prevented the escape of the French garrison at Almeida, had ordered him to be court-martialled, and that Campbell had blown out his brains. Masséna, at this very moment, was replaced in command by Marshal Marmont. Napoleon was discontented with Masséna, and recalled him to Paris.

Here ends the second volume of Marbot's memoirs. The close is, perhaps, a little more dry than the rest of the work. Marbot is so anxious to depreciate Masséna that he enters into more minute military details; but these details are very interesting, and give us, better than many other books, the true color and character of the Peninsular war.

Correspondence.

THE LOWELL FAMILY.

To the Editor of The Nation:

Sir: Two statements in the first paragraph of the article in the last number of the *Nation* giving an account of James Russell Lowell's career call for correction. The poet's grandfather, the Hon. John Lowell, is spoken of as having "permanent fame as author of that clause in the Massachusetts Constitution which abolished slavery." The clause referred to occurs in the first article in the Declaration of Rights prefixed to the Constitution of 1780, and the honor of its authorship probably belongs to John Adams. The Rev. Charles Lowell fully believed that his father, Judge Lowell, was the author. He writes in 1856:

"You will find, by referring to the Proceedings of the Convention for framing the Constitution of our State, and to Eliot's New England Biographical Dictionary, that he [Judge Lowell] was a member of the Convention and of the Committee for drafting the plan, etc., and that he suggested and urged on the Committee the introduction of the clause, taken from the Declaration of Independence a little varied, which virtually put an end to slavery here."

Unfortunately for Judge Lowell's claims, an examination of the authorities cited by his son fails to sustain his belief that the Judge "suggested and urged on the Committee the introduction of the clause." On the other hand, the evidence in favor of John Adams is positive and is found in his own words. We know that the Convention chose a committee of thirty to frame a Constitution and Declaration of Rights, and that the committee of

thirty appointed a sub-committee of three to prepare a draft. James Bowdoin, John Adams, and Samuel Adams were the sub-committee. At the request of Bowdoin and Samuel Adams, the draft was prepared in writing by John Adams. In a letter written to Judge W. D. Williamson, dated February 25, 1812, John Adams says: "The Declaration of Rights was drawn by me, who was appointed alone by the Grand Committee to draw it up. The article respecting religion, as I said before, was the only article which I omitted to draw." The late Charles Deane, LL.D., discussed this question of authorship in a paper published in the Proceedings of the Massachusetts Historical Society, vol. xiii., and maintained that the evidence was strongly in favor of Adams. James Russell Lowell's pedigree as given in the *Nation* is incorrect. We read:

"The father of the Rev. John Lowell was Percival Lowell, a merchant, who came from Bristol, England, in 1639, and settled in Newbury, Mass. James Russell Lowell was thus of the fifth generation from one of the founders of New England."

He was of the *eighth* generation, counting Percival Lowell as the first. Three generations are omitted from the line of his ancestors in this country. The Rev. John Lowell was the son, not of Percival, but of Ebenezer Lowell of Boston, shoemaker, and grandson of John Lowell of Boston, a cooper. The last-named John of Boston was the son of John Lowell of Newbury, and grandson of Percival Lowell, above mentioned, who came from Bristol to Newbury in 1639.

Yours very truly, F. L. Gay.

Brookline, Mass., August 14, 1891.

McKINLEY AS A PROPHET.

To the Editor of the Nation:

Sir: In the review in your current number of Mr. McKinley's speech at Lakeside a few days ago, you quote him as follows:

"Mark my words: inside of four years you will get cheaper tin than you ever got before, and it will be American tin, made in American mills, from American raw material, by American workingmen, for the American people."

In a speech delivered in this city but a little less than a year ago, he used the following language:

"While I was speaking [namely, in the House when he reported his bill], Mr. Niedringhaus of Missouri sent a note to me by a page, and said: 'You can put it stronger than that. Last week, in our factory, we made tin plate, having the faith that your bill would become a law.' They have already organized companies in Baltimore, in Toledo, in Chicago, and in Pittsburgh to manufacture tin plate for the people of this country. And they will do it, mark my words. If you don't remember a single other statement that I make here to-night, remember this—that inside of two years tin plate will be cheaper in this country than it is to-day. And it will be American tin plate, made in American mills, out of American iron and American steel, and wrought by the skilled hand of American workmen."

The same Mr. Niedringhaus is now giving out that he intends to import the skilled labor to make his Republican tin-banquet ware. Perhaps that is why Mr. McKinley does not now couple Mr. N.'s name with his statement that "American workingmen" would shortly make tin plate. And it may be that is why his eloquent phrase, "wrought by the skilled hand of American labor," has shrunk to plain "American workingmen" in his latest deliverance.

Did he tell his Ohio audience what had become of the companies referred to in his Michigan speeches last fall? And why does he now postpone the happy time three years longer? Possibly he would deny that he does. He now says "inside of four years," and it is certainly true that one year is "inside" of four years! Doubtless this explanation would be satisfactory to all orthodox Protectionists. Or it may be that he now thinks that inasmuch as he and his friends were "snowed under" when he made the limit two years, if he makes it four the result will be more favorable. H.

Grand Rapids, Mich., August 14, 1891.

THREE NON-USURERS FROM RUSSIA.

To the Editor of The Nation:

Sir: I have lately come across three Jews from Russia who were quite free of the taint of usury or exploitation of the peasants. Mr. B., from the Ukraine, to steer clear of these vices, studied chemistry, and became technical manager of a sugar-refinery. About three years ago it burned down, and was, for some reason, rebuilt in another village. Under a recent "law," forbidding Jews to live in villages of which they were not residents at the time, he had to give up his place. He came to this country, and, finding no immediate employment in his own line, studied law at New York, where he took first honors at the University Law School.

Mr. B., of Kovno, also unwilling to live by usances, resolved to become a physician, and to that end attended the gymnasium of his city for five years. Then he and fifteen other Jewish boys were expelled for not boarding at the hall, under some old forgotten regulation requiring them to do so. He then got a place as clerk in the city post-office, which he kept for a good while, till the Postmaster-General ordered his dismissal simply for being a Jew. He then went to Zürich and to Paris, where he studied medicine for a couple of years, supporting himself meanwhile by journalistic work. Finding, on a trip to his home, that he would probably be forced into the army, though exempt by law as an only son (in Russia laws in favor of the Jews are ignored), he shook the dust from his feet and came to this country, where he now supports himself by teaching.

A plain trader, E., from the "Vistula country," was also so averse to usury that he invested all his earnings in a house and lot. To rid the Holy Empire of his hurtful presence, he came to this country, and, having established a humble business, wrote back to his wife to sell the house and join him, and tried to send her a power of attorney for that purpose. But when he sent it to Washington to have it "legalized" by the Russian Legation, he found that the Russian ministers and consuls were forbidden to legalize any instruments looking to transfers of land in any of the provinces formed out of the old Republic of Poland. If he wants to sell his house, let him go back to the sacred soil, with all the risks which such a visit implies.

Now, all these wrongs on the part of the Czar's Government, unutterably mean as they are in the eye of every just man, may pale into insignificance when we recollect that the same Government allows noble-minded, high-bred women to be flogged to death; but they remain not the less mean and destestable. Queen Victoria has one subject—let us hope only one—who has words of excuse, nay, of justification, for that Government.

Yours again, L. N. D.

Louisville, Ky., August 15, 1891.

ADELBERT COLLEGE VS. CO-EDUCATION.

To the Editor of The Nation:

Sir: Will you permit me to call attention to the conclusion drawn in the *Nation* of August 6 from the last report of the Cleveland College for Women? It is a natural inference that a total enrolment of 132 in three years shows a reaction against the co-educational practice of the West—if it can be assumed that when a young woman chooses a college the only factor involved in the question of choice is that of co-education. But young women select a college for the same reasons as do young men. The large enrolment at the Cleveland College for Women may with equal fairness be assumed to show a decided preference for education in a large city to education in a small town like Oberlin, Ann Arbor, or Ithaca; for a small college rather than a large university; for an endowed institution rather than one maintained at the expense of the State; for a college distinctively Christian but undenominational rather than one sectarian or purely secular; for a college having a dormitory system rather than one without. As a matter of fact, it shows that a large number of young women are enabled, through the existence of this institution, to take a college course who would not otherwise do so. The last catalogue shows an attendance of fifty-eight; fifty-four reside in Cleveland, three in Ohio much nearer Cleveland than Oberlin, Ann Arbor, or Ithaca, and one address is given at Washington, D. C., where the competition of Vassar, Wellesley, and Smith is stronger than that of Oberlin, Michigan, or Cornell. A new college means not necessarily competition with older institutions established on a different basis, but rather enlarged opportunities for those in its immediate vicinity. This has been true of Barnard College, the University of Cincinnati, and other local colleges. The question was recently asked of the women attending a local institution, how many of them would have taken a college course elsewhere, and but five per cent. answered in the affirmative.

It must be shown that the number of women in attendance at Oberlin, Michigan, or Cornell is decreasing either relatively or absolutely before the conclusion can reasonably be drawn that the establishment of a separate college for women means a reaction against co-education. There are many persons who honestly prefer for themselves the system of co-education, while recognizing fully its limitations; is there more involved in the preference than when others prefer a dormitory system, or State education, or colleges in rural districts, or universities in cities, or sectarian institutions? That impression is sometimes conveyed when the friends of separate education for women announce the decline of co-education.—Respectfully, M.

Holland Patent, N. Y., August 15, 1891.

MARTHA WASHINGTON'S FATHER.

To the Editor of The Nation:

Sir: The Rev. W. M. Clark, Rector of St. George's Church, Fredericksburg, Va., has recently undertaken to have the old graveyard repaired, it having been in a sad state of neglect for many years. I am informed by him that a stone has been unearthed bearing the inscription: "Here lies interred the body of Col. John Dandridge of New Kent Co., who died Aug: 3, 1756. Aged 56 years." This is unquestionably the father of George Washing-

ton's wife. Col. John Dandridge resided at the "White House" in New Kent.

Mr. Clark's laudable purpose is rendered somewhat slow by the scant means at his disposal, but there is fair prospect that other gravestones of historic interest may be discovered. In St. George's Church was buried Col. Fielding Lewis and in the churchyard two of his children. Probably the Paul family, whom John Paul, who afterwards added Jones to his name, visited, were here buried.

MONCURE D. CONWAY.

AUGUST 10, 1891.

NAPOLEON—CÆSAR.

TO THE EDITOR OF THE NATION:

SIR: The anecdote, extracted from Marbot's Life, in the last letter of your Paris correspondent, of Napoleon's interview with the old grenadier who asked for the Legion of Honor because he had offered his General a watermelon in the desert of Jaffa, strikingly resembles a story told of Julius Cæsar and one of his veterans in Seneca's 'De Beneficiis':

"Causam dicebat apud divum Julium ex veteranis quidam paulo violentior adversus vicinos suos, et causa premebatur. 'Meminisli,' inquit, 'Imperator, in Hispania talum extorsisse circa Sucronem?' Cum Cæsar meminisse se dixisset, 'Meministi, quidem,' inquit, 'sub quâdam arbore minimum umbræ spargente cum velles residere, ferventissimo sole, et esset asperrimus locus in quo ex rupibus acutis unica illa arbor eruperat, quemdam ex commilitonibus penulam suam substravisse?' Cum dixisset Cæsar, 'Quid meminerim? et quidem siti confectus, quia impeditus ire ad fontem proximum non poteram, repere manibus volebam, nisi commilito, homo fortis ac strenuus, aquam mihi in galea sua adtulisset.' 'Potes ergo,' inquit [veteranus], 'Imperator, agnoscere illum hominem aut illam galeam?' Cæsar ait se non posse galeam cognoscere, hominem pulchre posse, et adjecit, puto ab hoc iratus quod se a cognitione media ad veterem fabulam abduceret, 'Tu, utique, ille non es.' 'Merito,' inquit, 'Cæsar, me non agnoscis; nam cum hoc factum est integer eram. Postea ad Mundam in acie oculus mihi effossus est, et in capite lecta ossa. Nec galeam illam, si videris, agnosces; machæra, enim, Hispana divisa est.' Vetuit illi exhiberi negotium Cæsar, et agellos in quibus vicinalis via causa rixae ac litium fuerat, militi suo donavit."

Yours truly, CESSATOR.

NORTHEAST HARBOR, August 12, 1891.

Notes.

DR. EWALD FLÜGEL is preparing for early publication at the Clarendon Press, Oxford, the Life and Correspondence of Sir Philip Sidney. He will be greatly obliged if any librarians or private collectors who are in possession of inedited letters of Sidney will communicate with him and, if possible, furnish him with transcripts. His address is Sidonienstrasse 39, Leipzig, Germany.

Prof. R. Lanciani, who has lately brought out a work on the topography of Rome in the eighth and twelfth centuries, is now engaged upon the second volume of his 'Ancient Rome.' Its ten chapters will deal with the Walls, from those of the Palatine to those of Urban VIII., the Temples and Shrines, the Coliseum, the Tombs of the Cæsars, the Tombs of the Popes to the end of the tenth century, Pagan Cemeteries and Christian Catacombs, Summer Resorts, the Transformation of Pagan Rome into a Christian City, Early and Mediæval Churches and Cloisters, and the Way in which Ancient Rome was Buried. The author hopes to go to press in season for a publication at Christmas, 1892.

Prof. H. Graetz, the well-known historian of the Jews, is about to publish in Breslau in four volumes a "textus castigatus et emendatus" of the Old Testament, making use, in conjunction with his own studies and researches for half a century, of all the widely dispersed critical apparatus of that period. His emendations surpass by many hundreds those of his predecessors, and he hopes to furnish a basis for a universally intelligible translation into modern tongues.

The effects of a law are often most unexpected, and one result of the new Copyright Act will be the publication of plays by foreign dramatists hitherto kept in manuscript to preserve the stage-right recognized at common law. Hitherto Mr. W. S. Gilbert has been the only English dramatist who has freely published his works. Now, however, the plays of Mr. Henry Arthur Jones are announced for publication by the Macmillans, and those of Mr. Arthur W. Pinero are shortly to be issued by another English publisher. In the United States, Mr. Bronson Howard has printed only one of his successful plays, "Saratoga." Time was when new pieces were regularly published and were regularly read, much as novels are now. The custom ceased scarcely half a century ago. Certain of the earlier comedies of the late Dion Boucicault are obtainable in seemly pamphlets now, unlike the broad-paged books in which M. Alexandre Dumas *fils* and M. Pailleron first issue their comedies. It will be most interesting to observe what the effect will be upon the literature of the stage of the author's consciousness that his work is to be tried again in the library.

Sir Edwin Arnold's letters from Japan will be published in London and New York by Longmans, Green & Co. under the title of 'Seas and Lands.' They will appear in the fall and will be elaborately illustrated from photographs. The same firm have in press 'Anthropological Religion,' by Prof. Max Müller, the Gifford Lectures delivered before the University of Glasgow early this year; and also a new series of Mr. "F. Anstey" Guthrie's 'Voces Populi,' reprinted from *Punch*.

Lee & Shepard will publish immediately 'The Abbess of Port Royal, and Other French Studies,' by Maria Ellery Mackaye, with an introduction by Mr. T. W. Higginson.

Little, Brown & Co., Boston, have in press a new collection of poems by Nora Perry, and a ninth and final edition of Mr. John Bartlett's 'Familiar Quotations.'

Houghton, Mifflin & Co. have under way several holiday publications, including Howells's 'Venetian Life,' with water-color sketches by various artists; Whittier's 'Snow-Bound,' illustrated by Edmund H. Garrett; and Holmes's 'One Hoss Shay,' illustrated by Howard Pyle. Other works in preparation are Dr. Holmes's Writings in fourteen volumes (an array unsurpassed by Lowell, Emerson, or Whittier, we believe); Carl Schurz's 'Abraham Lincoln'; 'Three Episodes of New England History,' by Charles Francis Adams; 'History of Historical Writing in America,' by J. Franklin Jameson; and biographical sketches of the Georgia members of the Continental Congress, by Charles C. Jones.

Allyn & Bacon promise, for high-school use, 'Select Essays of Macaulay,' viz., on Milton, Bunyan, Johnson, Goldsmith, and Madame D'Arblay, edited by Samuel Thurber.

Ginn & Co. have nearly ready 'Talks with Young People about the Wonders of the Heavens,' by Sir Robert S. Ball, Royal Astronomer of Ireland, with illustrations; and 'Cardinal Newman's Essay on Poetry, with Reference to Aristotle's Poetics,' edited by Prof. Albert S. Cook.

'Two Girls on a Barge,' illustrated by F. H. Townsend, and 'On the Lake of Lucerne, and Other Stories,' by Beatrice Whitby, will form part of the seasonable light reading to be furnished by D. Appleton & Co., who have, by the way, just issued an authorized American edition of Mrs. Annie Martin's 'Home Life on an Ostrich Farm.' The English edition of this entertaining narrative has already received favorable notice in these columns.

D. C. Heath & Co. publish directly 'Folk and Fairy Tales in French for Young or Old Children,' selected and edited, with a vocabulary, by Prof. E. S. Joynes, and an illustrated edition of Andersen's 'Bilderbuch ohne Bilder,' similarly edited by Dr. Wilhelm Bernhardt.

John A. Taylor & Co., New York, announce a "Broadway Series" of novels, in which English and American authors will be represented, *e. g.*, Mr. John Habberton, Mr. Clark Russell, Mr. James Payn, Mr. Julian Hawthorne, etc.

'The Leaf-Collector's Hand-book and Herbarium' is a rather large octavo volume published by G. P. Putnam's Sons, and prepared by Mr. Charles S. Newhall, whose 'Trees of Northeastern America' was noticed by us last year. This volume consists mainly of coarsely executed cuts of the leaves of our native trees. Opposite each cut is a blank page to which the leaf-collector is desired to fasten his pressed leaves by slips of gummed paper, several pages of which are furnished at the end of the volume. When all this has been done, and the industrious collector has read what the author has said of each tree in his former work, we trust he will not be satisfied with his acquirements, but will be tempted to wish for something more.

The second part of Dr. Harold Whiting's 'Short Course of Experiments in Physical Measurement' (Cambridge, Mass.) has already been noticed in these columns, and we have only commendation for the third part, which has lately appeared. This treats of general principles and methods, and contains a large number of useful tables which, rightly used, furnish much material for study independently of their ordinary applications. After a good introduction we have a chapter on general definitions. These are well and clearly stated. Next come chapters on observation and errors, on general methods of measurement, and on reduction of results. The separate branches of physics are then taken up in order, the principles of the method of measurement employed being explained by reference to established physical laws. The work is likely to prove very useful, and we shall look with interest for the concluding volume.

We fail to see the *raison d'être* of Mr. Charles V. Burton's 'Introduction to Dynamics' (Longmans), which only adds one to the large number of treatises upon the subject, and is not particularly original, though certainly a fairly good compilation. The real value of the work —and it is no small merit—consists in the large number of examples. These are found not merely in the text, but also in a long appendix, together with the answers, and will certainly find favor with teachers.

Mr. John Goss's 'Forensic Eloquence' (San Francisco: The S. Carson Co.) is to be commended for its plan, which is to accompany the theoretical exposition with running illustrations in the shape of extracts from historic orations and debates. This subserves the double purpose of giving point to the argument and of throwing light upon the citations. Of the execution, our praise must be qualified: both judgment and taste are often defective.

The need of a satisfactory text-book on morals for use in the common schools is so crying that any attempt to provide it must be welcomed, especially when it comes in so worthy a form as 'Duty,' by ex-President Seelye (Ginn & Co.). This is written with great directness and force, though cast, it seems to us, in too formal a mould of logical division. We also think the section on "Duties to Government" deserved a less meagre treatment; and, in particular, we should have looked for a word on the dangers of blind partisanship from a man who was once sent to Congress in protest against it.

Dr. R. W. Shufeldt proposes, in the July *American Naturalist*, to employ the growing army of amateur photographers in the service of science. He dwells upon the defects of many of the figures of animals and natural objects still to be found in text-books, attributing them to the faulty material in the hands of the illustrator, and urges the amateur to concentrate his vague enthusiasm upon the definite object of securing good negatives of the furtive inhabitants of the forest, particularly birds.

Prof. Edward S. Holden has a communication in *Nature* of July 9 in confirmation of investigations by Francis Galton. It relates to the remarkable color-associations possessed by a daughter of his, and gives lists of the colors which she has assigned to the days of the week, the letters of the alphabet, and numbers up to ten—the lists being taken down by her father on six different occasions during the past nine years (she is now upwards of sixteen). A high degree of constancy is to be observed in these authentic records of color-association, and Prof. Holden hesitantly suggests that the color seems to be associated with the sound rather than with the form of the letter; but he thinks many more observations must be made before definite conclusions can be drawn. In the same number is given the forecast of Mr. Eliot, the meteorological reporter to the Government of India, which predicts delayed and scanty monsoon rains, principally on the basis of the abnormally heavy snowfall in the Himalaya last winter—a prediction which has, unfortunately, been very closely fulfilled.

A new commentary on the "Divina Commedia" is advertised in a prospectus which we receive from F. W. Christern. Father Joachim Berthier, professor of theology at the University of Fribourg, Switzerland, is the author of it, and his main interest lies in elucidating Dante's "sublime doctrine," his "primordial thought," which involved the production of a work of moral philosophy: in other words, Father Berthier aims to exhibit the poet's "truly marvellous doctrinal edifice." Happily for the common mind, he has joined with this a copious archæological illustration, in portraiture, landscape, plans of ancient towns, monuments, etc., etc. The work will fill three small-folio volumes, with a very large letter for the text and a clear typography for the commentary.

—Two "humorous" publications, somewhat similar in subject-matter, are 'Farming,' by Richard Kendall Munkittrick (Harpers), and 'Adopting an Abandoned Farm,' by Kate Sanborn (Appletons). The humor of the first is of that resolute type common in the funny column of the newspapers. One feels that the author, like the Scotchman of the story, "jocks wi' deefficulty," but that, having once determined to joke, he allows no difficulty to prevent his performing the task. The illustrations, by A. B. Frost, are much better than the text, though his style of pen-drawing is too elaborate in light and shade for real success in caricature. His best work is in the least extravagant drawings. The effect produced by printing the text and drawings in different colors is, to our eye, disagreeable. The cover, with its *semée* of potato-bugs, is, perhaps, the best thing about the book. Miss Sanborn's book is better, and even has a faint but agreeable literary flavor. It is true that this is largely attained by a liberal use of the scissors, chapter iv., for instance, being almost entirely made up of quotations from Ik Marvel, Carlyle, Beecher, Bayard Taylor, Dr. Holland, Miss Mitford, and Southey on dogs and cats; but there is some original matter in the book, and it is pleasant enough fooling. There are no illustrations, but the paper and print are lovely to look upon. Neither book is unexceptionable in its English.

—Mr. and Mrs. Pennell have made a very pleasant summery book out of a summer voyage on the Thames, and called it 'The Stream of Pleasure,' and Macmillan & Co. have given it a pretty dress. Mrs. Pennell's prose flows gracefully and limpidly, like the river it celebrates, but, to most people, the main interest of the book will be found in the drawings. These are in pen and ink or wash, and are reproduced by various processes, and, in a few cases, by wood-engraving. We have before spoken at length of Mr. Pennell's mastery of pen and ink in the rendering of architectural motives. The medium is not quite so well suited to pure landscape subjects, and some of these drawings are hurt by excessive reduction. Water color comes nearer to rendering the effects desired, and, though Mr. Pennell is not so unrivalled in his use of pure wash, he has done well to make the major part of the drawings in that vehicle, and has probably come as near as any one could without color to realizing the charm of river scenery. Many of the pictures are beautiful and all are clever. The book should appeal to a people as fond of summer outings as our own. The identification of the scenes depicted is sometimes difficult, as there are no titles under the drawings, and the book is unprovided with a list of illustrations or even a table of contents.

—The superior person who enlightens the readers of the *Pall Mall Budget* on the subject of philology, if told that he himself has still something to learn, would doubtless feel affronted. *Program*, for *programme*, he has recently denounced as an "ignorant Americanism." The spelling *programme* was taken from the French, and in violation of analogy; seeing that, when it was imported into English, we already had *anagram*, *cryptogram*, *diagram*, *epigram*, etc. Half-way towards *program*, and yet as anomalous as *programme*, is *programm*, by which Liddell and Scott defined πρόγραμμα. Prof. Skeat, in his 'Etymological Dictionary,' gives "programme, program"; thus recognizing the common American spelling as justifiable. Having despatched *program* to his satisfaction, the superior person aforesaid announces that, in the word *gubernatorial*, "a fresh horror has been invented." This "fresh horror" he has discovered in the London *Daily Chronicle*, where, in the phrase "gubernatorial appointments," he supposes that it first saw the light. Let it pass that Americans have been coming across the "horror," every now and then, for at least three-quarters of a century. "Gubernatorial appointments ought to mean," we are told, "appointment of pilots." There may be eccentric mortals to whom *gubernatorial* is not only acceptable, but on a plane with the apocryphal old lady's "blessed word *Mesopotamia*." Though offensive to good taste, it may, however, be vindicated etymologically. Only by virtue of its context, as, for instance, when joined to *rei publicæ*, is *gubernator* good Latin for "governor." Yet, in giving it, taken out of its context, the same sense, no more violence would have been done than is observable in the case of other expressions without number. The uninformed censure of *gubernatorial*, as being made connotative of "governor," applies equally to *gubernance*, *gubernation*, and *gubernative*, legitimate, though unlovely, and, like the rawness shown above touching *program*, suggests that the censurer would be well advised in not airing his rudiments, linguistic and historical, while in their present circumstances of poverty.

—Many are the inquiries made, from time to time, of the Colonial Secretary's Office at Barbados, for records which may throw light upon the ancestry of some family or the other, now settled in the United States, whose forefathers had removed from that old English colony in our own colonial days. Such inquiries sometimes fail of success because of the grossly neglectful manner in which, until of recent years, the old papers of the island were left to take care of themselves. The wonder is, that these valuable documents escaped destruction, for at least one member of the Legislature has expressed the opinion that they ought to be burned. But now comes gladsome news that the local authorities have appointed a committee to inquire into and report upon the condition of the records of the island. The Committee consists of the Colonial Secretary (Mr. Clement Courteney Knollys), the Solicitor-General (Mr. Herbert Greaves), and Mr. C. T. Cottle, a member of Assembly.

—Apropos of these records, a correspondent writes as follows:

"Having got it into my head that 'cosen John Washington' mentioned in Theodore Pargiter's will (1654-1656), as being then apparently in Barbados, might be shown to be one and the same with John Washington, who emigrated from England to Virginia, as Mr. Waters lays down in his 'Ancestry of Washington,' I wrote to Barbados for a copy of the ticket issued in 1655 for 'cosen John Washington' to leave the island. Replying to my application, Mr. E. G. Sinckler, the well-known Chief Clerk of the Record branch of the Colonial Secretary's office, whose help has availed many inquiries on both sides of the Atlantic, has informed me that it is simply impracticable to search for the Ticket in question, in the present disarranged state of the Records. Some years ago, some disorderly person jumbled together old books and papers, without regard even to dates, excepting so far as to label each of the fifty japanned tin boxes into which he put the documents out of the way, 'Deeds and Other Papers, 1600 to 1800.' An enthusiastic American gentleman of the name of Ellery attempted to make a search among these old papers, but had to give it up. As no one could leave Barbados in 1655 without first obtaining a ticket from the Secretary's office, John Washington, assuming that he did visit Barbados, would need to obtain a ticket before quitting. If the record of tickets issued in 1655 could be found, some details might be preserved which would identify the 'cosen John' with the first Emigrant.

"Now let me say why I think that the first Emigrant might have visited Barbados. The reference to 'cosen John' in Theodore Pargiter's will suggests the former's being at Barbados. A reference to page 11 of the 'Ancestry of Washington,' by Mr. Waters, shows that, whereas Mrs. Washington, the mother of the first Emigrant, was buried on the 19th of January, 1654, it was not till the 8th of February, 1655, that letters of administration were issued to her son John. If that son was not

absent from England, and in foreign parts, why was there so long an interval as did elapse? The Pargiters were connected with Barbados. On the 21st of May, 1653, the Council of State granted a license to Thomas Pargiter to export to Barbados fifty dozen of shoes and twelve nags. (See Calendar of State Papers, Colonial, 1574–1660, p. 402.) In 1666, Thomas Pargiter was a member of the Assembly of Barbados. (See Calendar, Colonial, 1661 to 1668, p. 352.) The fact that Tom Verney was longer in Barbados than in Virginia may be alleged with equal reason for a kinsman's going to Barbados, just as it has been urged as a link drawing the first Emigrant to the Old Dominion, that the ne'er-do-weel Tom had been an early settler in the latter country. Again, in 1655, old style, among the settlers in Barbados was Captain Gerard Hawtayne of Calthorpe, in the County of Oxford, who was a son, or grandson, of Margaret Washington, who is noted in the pedigree attached to the pamphlet of Mr. Waters as having married Gerard Hawtayne of Esington, Oxon. It is clear from Theodore Pargiter's words that John Washington was beyond seas about 1655, and equally clear that he was thought to be in Barbados. Then there were the Pargiter, Verney, and Hawtayne connections with Barbados. And why so long in obtaining letters of administration to his mother's will unless he were far over sea—in fact, as Dryden has it, in

"'Far Barbados on the Western Main'?"

—M. John Grand-Carteret has, in the *Revue Bleue* for August 1, a paper on the portraits of Danton which contains much curious information. It might almost have been as short as the chapter on snakes in Iceland, for there are next to no first-hand portraits from life of the great orator. To two crayon sketches by David and one by Vivant-Denon, and especially to the former, M. Grand-Carteret alone ascribes authenticity, and he reproduces one by each of these artists in facsimile. These effigies of a physiognomy devoid of a single line of beauty, and possessing a contorted mouth almost to be designated a snout (to which add the notorious pock-marks), prove that Danton was for artists what Cruikshank, in his 'Sketch-book,' calls "an ugly customer." This might well explain the failure to portray a popular leader at a time when portraits were all the fashion, as one of the readiest signs of the new reign of equality; but it would not account for the absence of caricatures, which often are among the truest "human documents." M. Grand-Carteret takes account of the artistic difficulty, but also ventures to inquire whether we must infer that Danton was, after all, less popular than has been thought, and enjoyed only a restricted notoriety. For the collector's enlightenment, he reproduces two engravings after Bonneville and one after Boze, which he will not allow to have any value, and one by Jeanron, interesting only as an idealization made in the early part of the reign of Louis Philippe.

PERROT'S ART OF THE MEDITERRANEAN.

History of Art in Sardinia, Judæa, Syria, and Asia Minor. From the French of Georges Perrot and Charles Chipiez. Illustrated with 406 engravings and eight steel and colored plates. 2 vols. Translated and edited by I. Gonino. London: Chapman & Hall; New York: A. C. Armstrong & Son.

We regret that we cannot recommend the English translation of Perrot's latest volume. Those who know French will do well to read the book in the original, as the translation will be found to be very trying to the nerves of the English-speaking world. Still, the intrinsic merit of the important work is so great that those ignorant of French will get much instruction and enjoyment from the pages even of the English translation, provided they can content themselves to wade through villanous or obscure English on almost every page. The very name of the translator arouses our suspicion, and leads us to the inference that he was not born with an English tongue in his head, but has learned English from books, and well, too, but still not well enough to make him equal to the task of translating a great work into idiomatic English.

The translator's spelling of Turkish words is often misleading to us, for symbols that give the correct pronunciation of Turkish words to Frenchmen fail to do so to Englishmen. In the English translation, Turkish words should be disrobed of their French dress and be respelled with English symbols, or else the value of the symbols used should be defined in the preface. For instance, *Tach* does not tell that the word can only be represented in English by *Tash*. The misspelling of the names of prominent men may be due to bad proof-reading, but, at any rate, we find Heumann (ii, 64, note—67, note); Handi Bey (ii, 60). Even Delbet, one of Perrot's coadjutors in a former work, becomes Debet (ii, 101). The proof-reading is bad throughout, and that, too, not only in the English text, but also in the citations in French, Italian, German, and Greek. Now and then the decipherment of Greek quotations requires considerable ingenuity.

But the translator is not the sole sinner; we have grievances against Perrot, the author. We begin with minor defects. In ii, 227, we read: "It is indifferently called the Nimphi or Karabel warrior; the former appellative is due to a village hard by, the Nimphæum of the Byzantines; the latter, to an isolated house which gives the name to the important pass leading to the plains watered by the Hermus and the Cayster." We deny a part of this. Karabel is a compound word made up of *kara* (black) and *bel* (pass). We therefore fail to see how the name "Black Pass" could have its origin in the existence of an isolated house in the neighborhood. We feel that the author is to be censured more than once for an evident but not well-founded assumption of a knowledge of Turkish superior to that of other travellers. To illustrate: Puchstein and Humann, in their 'Reisen in Syrien,' describe the Hittite remains at Saktchegözü, a word of correct formation in every way. Now, Perrot assumed that the Germans had not heard the latter part of the word correctly—such assumption is always easy at home in one's study; then he remembered that he had heard of many "Göksu," streams, and so he made haste to write *Saktchegheuksou* (ii., 47, *sæpe*), a form which will have to be corrected in a new edition. An immense Hittite stele was discovered by Sterrett in 1885 at Fassiller, a name in which each letter is pronounced clearly and distinctly. This name M. Perrot has changed to *Fasiler* (ii., 222, 245). He also mentions the finding of a Hittite intaglio seal at *Chanah* (ii., 245), a name never used by the finder (Sterrett). Again, the words Elflatun Bunar mean "Plato's fountain" or "spring," so that the remark (ii., 214), "the springs of Elflatoun, also called Plato's fountain," is equivalent to saying: "Plato's fountain (spring), also called Plato's fountain" (spring).

The discovery of the Assyrian lions at Arslan Tash in the plain of Serudj (in Mesopotamia, opposite Carchemish) is ascribed wrongly to Haynes (ii., 48). Now, if any one is to be mentioned by name as the discoverer of the important monuments, the honor might justly be claimed by the leader of the expedition, viz., Dr. William Hayes Ward. In fact, there are several serious blunders in note 2 of p. 48, but, as we have not the French edition, we do not know whether to ascribe them to the author or to the translator. We mention here in passing that in Perrot's discussion of the Hamath stones we look in vain for the name of Dr. Ward. And yet, unless we err greatly, Dr. Ward was the first to publish these monuments. Wright also ('Empire') fails to note this fact. We do not like to see our American scholars neglected. The Albistan lions (ii., 43, note) are not mutilated. The stones have been exposed to the inclemency of the weather for several millenniums, and have rotted slowly away, but there has been no mutilation.

But, leaving such minor blemishes as the above out of view, we fear that very many scholars will be astonished to learn that Perrot's "history" of art in Judæa consists mainly of an attempt to construct a temple after Ezekiel's plan; and be it remembered that Ezekiel's temple never existed save in the brain of the prophet. The chapters on sepulchral architecture, on religious architecture (consisting chiefly of an account of dolmens and menhirs), and on domestic architecture among the Jews are interesting. Perrot is probably at his best in the volume devoted to Hittite art. Twenty-five years ago he himself explored many of the Hittite rock-sculptures in Asia Minor, and his treatment not only of Boghaz-Kieni and Enyük, but of the whole Hittite question, is scholarly and accurate, though even here it is not exhaustive. His chapter on the climate of Asia Minor is exceedingly faithful, and his summing up of the general characteristics of the Hittite civilization is worthy of the most careful study. We should, perhaps, call attention to the fact that Perrot throws the Hittite period away back almost to the twentieth century B. C., while Puchstein ('Reisen in Syrien') limits it to the time between the tenth and sixth centuries B. C. When the doctors differ so widely, the conclusion may be drawn with safety that the data are at present not sufficient to settle the question. The moral is, that explorations in the field of Hittite archæology should be pressed with renewed and unwearying vigor.

Perhaps the greatest surprise of this noble work—and it *is* a noble work, whose presentment of facts far outweighs the blemishes of form in the English translation—consists in the revelation the author makes to us with regard to Sardinian art. Most educated men of to-day know more or less, absorb more or less from the periodicals of the day, about Jewish or Hittite art, but few, we feel sure, know much or anything about art in Sardinia. We will therefore give a short abstract of Perrot's account of art in the wild island of the Mediterranean. The sepulchral monuments of the Punic merchants are found only in Sardinia, and there only in the southwestern portion. The island was most probably colonized from Africa; its proximity to the continent would make the transit easily possible, and the similarity of appellatives seems to prove the theory. The buildings called nuraghs belong exclusively to Sardinia. The simplest form of nuragh is round in ground plan, and is built up of large, rough blocks of stone in such fashion that each successive layer has a smaller diameter than the one immediately below it. The building, therefore, assumes the shape of a cone, but is truncated before completion and terminates in a terrace on the top. Ruins of no less than 3,000 nuraghs exist in Sardinia, no two being exactly alike. There are also numerous agglomerations of nuraghs, the

most elaborate of which have many chambers and courts, while the simpler form has only one tholos-like chamber. The general outline of the nuraghs is the same, but their position varies much, for they are found everywhere, on the mountain-top and in the plain. They are generally found in groups that sometimes number 100.

Several theories in regard to the purpose for which the nuraghs were erected have been advanced: they have been called lighthouses, sepulchres, temples, altars, dwelling-houses. But in all probability they were fortresses intended to serve as places of refuge for family or tribe in time of hostile invasions. They may occasionally have been used as temples and sepulchres, but such use was always secondary. The people had no walled cities, but lived in numerous villages, whose centres were the nuraghs. The nuraghs were often used as workshops for the manufacture of arms, as excavations prove, and in their immediate neighborhood the dead were buried. The length of time during which nuraghs were built is not known, but they were the work of several generations during the Phœnician period, prior to the conquest of Sardinia by the Carthaginians. The idea of the nuragh seems to have been gained by native Sardinian soldiers during their African and Sicilian campaigns. It is not known when the nuraghs ceased to be built in Sardinia, but analogous structures of simple form are built to-day in southern Italy, where they are called *truddhi* (Lat. *trullum*). The truddhi serve a peaceful purpose, being used by the peasantry as places to sleep in during seed-time and harvest. The *specchie* (Lat. *specula*) or watch-towers of the same region take the place of the agglomerated nuraghs of Sardinia.

The sepulchres of the nuragh-builders are always found in the immediate vicinity of the nuraghs, and to this day tradition gives to them the name of giants' tombs. These tombs consist of a hemicycle of stone in the centre of whose arc rises a high oblong stele, behind which lies a grave built of stone and varying in length from five to ten yards and upwards. They are all oriented toward the rising sun. A hole in the stele at the base seems to have been used for thrusting in libations and offerings, a circumstance which points to a worship of the dead such as one should naturally look for among a primitive people. About the giants' tombs are usually found menhirs, *i. e.*, phallic emblems of life, and cromlechs, *i. e.*, circles of menhirs, emblems which still await a satisfactory explanation.

Sardinian art productions are not of a nature to attract and please eyes and tastes accustomed to Hellenic feasts, and Perrot has made a study of the Sardinian fragments of art-history because it serves to call our attention to what the world would have been had Tyre and Carthage remained mistresses of the Mediterranean. Sardinia is astonishingly rich in statuettes of men and animals, as well as in weapons and implements in bronze. The statuettes are archaic in character and strangely dry and rigid in outline, verging on ugliness and deformity. The native collections of these objects are varied and rich, but until a few years ago the very existence of Sardinian statuettes was not known; thanks are therefore due to Perrot because through him the unknown has become public property. The art productions of Cyprus were made in moulds that produced numerous replicas; they are therefore easily classified, but the bronze statuettes of Sardinia cannot well be classified because of their endless variety. The most of these bronzes represent the warriors, hunters, priests, or other characters of every-day life. Statuettes of deities are less common, but are easily recognized by a multiplicity of eyes, limbs, and weapons. Soldiers form the richest and most interesting group; they are all unmounted, nor has anything relating to horses, except two bridle bits, been found. Hunters are also common; figures of females are rare, and it is noteworthy that their dress is almost identical with that worn by the women of the interior of the island to-day. Almost all the statuettes that exhibit ordinary mortals have one hand uplifted in token of adoration, a gesture of prayer common to all ancient peoples. In all, then, the religious character seems pronounced; in fact they are all votive offerings. Very curious are the votive swords and other weapons mounted at the hilt on stone blocks. These swords were the offerings of chieftains after a successful foray, while the ex-voto swords of the common soldiers were first tied up into *fasciæ* and thus offered. Interesting, too, are the votive deer with swords piercing them. The boats that figure so prominently among the finds are also votive offerings by soldiers returned from service abroad. In point of style, Sardinian objects of art are rigid and harsh, sinning against good taste, but still to all intents and purposes they are the same as those of all primitive and barbarous peoples. The clay industry of the potter did not advance in Sardinia beyond the first beginnings: the vases are hand-made; nothing betrays acquaintance with the wheel, though a polisher was used. The vases are wholly without ornamentation.

HARDY'S CALCULUS.—II.

Elements of the Differential and Integral Calculus. Method of Rates. By Arthur Sherburne Hardy, Ph.D., Professor of Mathematics in Dartmouth College. Boston: Ginn & Co. 8vo, pp. xi, 239.

After the foregoing explanations we turn to Professor Hardy's book. He has placed upon his title-page the announcement "Method of Rates." The method is not new. The characteristic feature of his treatise is that, so far as fundamental principles are concerned, he makes use of no other. In his preface he says: "No comparisons have been made between this method and those of limits and infinitesimals"; but he suggests that these latter methods give a "larger view" of the subject, and says he omits them becaue they "cannot readily be given with good results in the brief time allotted to the subject in the general college course." He then says: "The immediate object of the Differential Calculus is the measurement and comparison of rates of change when the change is not uniform." Assuming the propriety of the employment of the word "rates," we should much prefer to say that the immediate object of the Differential Calculus is the comparison of rates of change which are not uniform with those which are uniform, and the reduction of the measurement of the former (which is impossible of direct accomplishment either in thought or fact) to the measurement of the latter (which is always possible). On page 10 he gives a more condensed yet more comprehensive statement of the object of the Calculus, but it seems to us to miss the main point, which is this: the facts of experience present us with certain quantities, like the distance passed over by the falling bullet, which, while they increase or grow continuously, never for any actual or conceivable portion of time increase at any one measurable rate except an average or mean rate. The object of the Calculus is to teach us how to find out all there is to be known about such quantities by bringing them into definite relations with other quantities which increase or grow in a manner directly measurable.

The inexorable limitations of space compel us to omit all we had intended to say of Prof. Hardy's first chapter. We can only state the general impression which it makes upon our mind. No one knows better than the author that, from the days of Euclid to the present time, the theory of parallel lines has been the "cross of mathematicians." Some mathematicians have endeavored to get over the difficulties of the subject by *defining* parallel lines as "lines which are everywhere equally distant from each other"—a definition which is no definition at all, but only a logical inference or demonstrable proposition following from any and all of the more fundamental definitions about which the mathematicians are in dispute. Such seems to us to be the case with Prof. Hardy's definition of a differential. Could we get a *rate*, that is, a ratio of a definite space to a definite time, out of a state of things in describing which the words "instant" and "point" are used for the express purpose of excluding all space and all time, and could we, independently of this, and as a matter of mere abstract numbers, explain and justify the process which the Differential Calculus employs, we should undoubtedly find that "the velocity at any instant" of our falling bullet, "that is, the rate of change of the distance, is the distance it *would* pass over in a unit of time were the motion to become uniform at that instant" (p. 7).

We pass to § 18 (p. 13), where the real development of the operative part of the Calculus begins. The fundamental theorem is: "The differential of the product of two variables is the sum of the products of each into the differential of the other." The theorem is as old as the Calculus itself, and is given in every treatise. It is, however, generally assigned a subordinate place and given as a deduction from other theorems. We consider it a decided merit of Prof. Hardy's treatise that he has placed it at the beginning, and from it has deduced the most important rules of the science. Before going further, we will make a brief explanation. In the Differential Calculus the letter d is used to represent the words "the differential of" which occur in every formula. Thus dx does not mean, as in algebra, the product of d and x, but "the differential of x"; $dx\,dz$ means "the product of the differential of x and the differential of z"; dx^2 means "the square of the differential of x." "The differential of x^2," which is quite another thing, is written $d\,(x^2)$. In the next place, it will be quite sufficient for the reader to regard "the differential of x" as simply a quantity to be added to or subtracted from x; in the former case it, of course, has the sign +, in the latter the sign —. The theorem quoted above, when expressed in the language of the Calculus, reads: $d\,(xz) = x\,dz + z\,dx$.

Whether Prof. Hardy regards what he has subjoined to the theorem as a demonstration or merely as an explanation and illustration, taking it for granted that he has *defined* all the difficulties out of the case, we cannot say. In either case he has certainly been very careless in presenting it. He says: "Let $y=xz$. Then y is the area of a rectangle whose sides are x and z." Of course, y may be that or any other of an infinity of things which we consider as being represented by the product of two variable factors. He then gives a figure of a rectangle the sides of which are intended

to represent x and z at the instant when they have a certain definite value. Of course, then, the area of the rectangle will represent the value of y at the given instant, the rectangle being supposed to be growing continuously larger and larger. He next supposes that at the given instant the rectangle ceases to grow *as a rectangle*, and begins to grow sidewise and lengthwise in the form of a carpenter's square with very short arms. As he supposes, this form of increase or growth continues until two new rectangles forming the arms of the carpenter's square have been produced, the area of one of which is equal to xdz and of the other to zdx. The first objection to this method of procedure is that it is wholly inapplicable, even as an illustration, to the case of a continuously decreasing rectangle. This case we must accept as an indisputable and at the same time incomprehensible consequence of the logic of the signs *plus* and *minus*. But there is the weightier objection that it ignores all the difficulties with which the greatest intellects of the human race have been struggling for two hundred years, as if they had no existence and all was plain. This may, perhaps, be excused on the ground that Prof. Hardy was writing a college text-book, not attempting to settle the disputes of mathematical philosophers or philosophical mathematicians.

We have said above that Professor Hardy has been very careless in presenting his illustration. That assertion needs justification. After supposing that at a given instant the change in x and z (the sides of the rectangle) becomes uniform, that is, goes on by equal amounts in equal times, he continues: "The change in y [the area] would then also become uniform." We attribute this astonishing assertion to mere carelessness, or, at best, to oversight. It is precisely because in this and the infinity of analogous cases "the change in y would" not "become uniform," that we have any such science as the Differential Calculus. Both sides of the rectangle, from being infinitely small up to their magnitude at the instant under consideration, and from that point on towards the infinitely great, may grow or increase and continue to grow or increase with absolute uniformity, and y, the area, has not increased and does not and will not increase uniformly during any actual or conceivable interval. It is not only the chief, but the sole object of the Differential Calculus, so far as rectangles are concerned, to discover and teach us how to calculate definite relations between the always uniformly varying sides and the never uniformly varying areas. The supposition that the sides and the area should both increase uniformly and the rectangle remain a rectangle, is a mathematical and philosophical impossibility. Stated generally, the calculation of definite relations between always uniformly varying factors and their never uniformly varying products *is* the Differential Calculus. All other cases may be reduced to this one. In his preface Prof. Hardy says: "Whether a quantity is or is not changing uniformly, however, the rate at any instant is determined in essentially the same manner, viz., by ascertaining what its change would have been in a unit of time had its rate continued what it was at the instant in question." This is equivalent to the following: The rate at the given instant, had it continued uniform, would have been, say R, and it would have been R because that was the rate at the given instant.

The theorem $d(xz)=xdz+zdx$ we consider but the algebraical abridgment of a more fundamental theorem upon which the whole fabric of the Calculus depends. We should despair of compressing into our limits the philosophical and mathematical considerations upon which it is founded. We therefore give it in its naked form for mathematicians to consider.

Let $y=xz$, then $dy=d(xz)$.

$$d(xz)=\frac{(x+dx)\ (z+dz)-(x-dx)\ (z-dz)}{2}$$

Performing the operations indicated we get:

$$d(xz)=xdz+zdx.$$

By supposing $z=x$ we can immediately get $d(x^2)$. But we prefer, on account of what follows, to give the form for this case.

Let $y=x^2$, then $dy=d(x^2)$.

$$d(x^2)=\frac{(x+dx)\ (x+dx)-(x-dx)\ (x-dx)}{2}$$

Performing the operations indicated, we get: $d(x^2)=2xdx$; substituting in the equation $dy=d(x^2)$ we have $dy=2xdx$; dividing by dx we get: $\frac{dy}{dx}=2x$. We thus obtain directly that "wonderful thing" the "differential coefficient," or "first derived function," or "first derivative with respect to x."

Next let $y=x^3=x^2x$; then $dy=d(x^2x)$.

$$d(x^3)=d(x^2x)=$$
$$\frac{(x^2+2xdx)\ (x+dx)-(x^2-2xdx)\ (x-dx)}{2}$$

Reducing, we have $d(x^3)=3x^2dx$ and $\frac{dy}{dx}=3x^2$.

We can thus go on to any extent, or prove the general applicability of the theorem by mathematical induction. For higher powers of x it is a matter of indifference how the factors are separated into two groups. Thus: $x^4=x^3x=x^2x^2$. Either form may be used, only recollecting to use the corresponding forms of the differentials. The short forms to which these formulæ reduce constitute the rules of differentiation.

As a college text-book Prof. Hardy's treatise is altogether praiseworthy. Clear, orderly, and systematic, we unhesitatingly recommend it to all who wish to make use of the most powerful of all mathematical instruments, the importance of which is daily increasing.

Recollections and Impressions. 1822–1890. By Octavius Brooks Frothingham. G. P. Putnam's Sons. 1891.

Mr. Frothingham's last of many volumes will be particularly welcome in Unitarian circles, from which he has never been excluded, and in which it is evident he now feels himself much more at home than he did while he was preaching in New York. These 'Recollections and Impressions' are significant of a more important change, for in them the writer, who was formerly as reticent in personal matters as he was outspoken in things ethical and theological, writes with the utmost frankness of his professional life, only his frequent lapses into the third person singular when speaking of himself suggesting any strain upon his natural modesty in so much reference to his own opinions and affairs. Happily, in this personal history there is less of self-depreciation than in the former habit of the writer's personal talk, but there is nothing which exceeds the limits of a proper self-respect; and those best acquainted with Mr. Frothingham's professional career will feel how little justice he has done himself as compared with the teachers and the friends whom he delineates with generous appreciation.

The opening chapter, "Parentage," reproduces the substance, not the form, of Mr. Frothingham's biography of his father, which came out a year ago. The impression given there is here intensified, for Mr. Frothingham is never happier than in his compact and vivid estimates of distinguished characters. Here, as in every subsequent delineation, we have the utmost kindness united with an absolute sincerity. His father's "dislike of Channing" and "his horror of anti-slavery agitation" are indicated without any attempt at palliation. The parts of his own character derived respectively from his father and mother are definitely assigned: "The dream of a nobler age for literature, art, science, humanity, came directly from my father. The desire to do something to make the dream an actual fact, to prove myself as of some service in the world, came from my mother."

The chapters on his Latin School and Harvard education are extremely brief; the part on the Divinity School being the most expanded. There we would gladly have had some fuller treatment of the professors, especially of Dr. Noyes, a man whose careful scholarship and admirable and vivid personality ought some time to receive the ample recognition they deserve. Mr. Frothingham's first settlement was in Salem, Mass., and his account of it is introduced with an elaborate tribute to the town, smacking too much of special preparation, and with too much "thinking under ground." Some of the personal names, which stand for much in local recollection, are mere names as we have them here, awakening no association. Mr. Frothingham's sympathy with the anti-slavery party and his admiration for the Abolitionists come out strongly in this chapter. It was this sympathy and admiration that made his Salem pastorate much briefer than it might otherwise have been. After the rendition of Sims or Burns—averse to dates and concrete facts, he does not tell us which—he refused the Lord's Supper to his church, knowing that the members generally were apologists for the Boston outrage. In this connection he speaks of himself as "democratic." His choice of terms is not often so inexact as here. Further on he describes Dr. Bellows as "an aristocrat." He was less of one than Mr. Frothingham in his tastes and breeding; but Mr. Frothingham was democratic in his convictions, and he had the courage of his convictions to their utmost bound. He was a conservative in the Divinity School in a radical set, a defender of the traditional Unitarianism of his father's coterie. Before leaving Salem in 1855, he had become a radical, transcendentalist in philosophy, anti-supernaturalist in theology, in criticism following the lead of F. C. Baur, in politics that of Garrison. Direct personal contact with Parker was at the bottom of the change, and he makes the event an occasion for a fresh characterization of Parker, which is more generous, and consequently more just, than that in his last volume, returning to that of his original biography of the great heresiarch. From Salem he went to Jersey City, and remained there four years; then to New York, and remained there till 1879. His discontinuance of the Communion Service in Jersey City suggests a discussion of the rite. His reasons for discarding it were not so personal as Emerson's. They were that it divided the congregation and encouraged self-righteousness. The reasoning is not clear which allows the ghost of it to liberals of the present day while it was impossible for him with any modification.

Mr. Frothingham's account of his New York ministry leads him to describe Dr. Bellows and Dr. Osgood. Both portraits are models of sincerity, and bring back the men to us in habit as they were. If there is a line misdrawn, it is that which minimizes the element of personal pique and disappointment in Dr. Os-

good's defection from the Unitarian body. A chapter on the war has a good word for those who did their best at home. When riots were the order of the day, he showed a manly front. In his account of the Free Religious Association he laments "the want of a leader," but those who remember his own leadership will have little sympathy with his lament, though doubtless "another Theodore Parker" would have given to the enterprise a popular impulse which it never had. That Mr. Frothingham's self-denying ordinance does not allow him to speak, except casually, of the living, has cut us off from any characterization of his colleagues Potter and Abbot; also from any of Samuel Longfellow, of whom we always think with him and Weiss and Higginson and Johnson and Wasson. Mr. Frothingham has written Wasson's Life, and he makes briefest mention of him here, but in a chapter on his companions there is loving justice done to John Weiss and Samuel Johnson, the latter a spirit of much deeper tone than his more brilliant friend.

Another interesting chapter is that on the author's teachers, the part on Dr. Dewey being more valuable than the part on Emerson, as dealing with a man whose worth was greater than his present fame. It is, to some extent, a vindication of Dewey's anti-slavery spirit, subordinated in an evil hour to his devotion to the Union and his dread of war. The emphasis of a chapter on his companions is upon George Ripley, whose biography Mr. Frothingham wrote for the "American Men of Letters" series. A chapter on the Clerical Profession deals mainly with the relations of clergymen to their rich parishioners. If the rule is mean subserviency, it has many honorable exceptions. Endeavoring to forecast the religious future of America, he seems to think that the Ethical Culture movement has the road, but subsequently he maintains that the religion of the future will be Christian, though hardly Unitarian.

The concluding chapter of "Confessions" brings out in sharp relief the writer's catholic sympathies, his freedom from all dogmatism, his insatiable curiosity, his delight in every manifestation of the free intellect, his insuperable inclination to hear the other side. These are not the qualities that attract partisans and develop organization; but they are qualities which, in a man or in his book, those who find something of them in themselves will attend to with much satisfaction.

The Buccaneers and Marooners of America. Edited by Howard Pyle. Macmillan & Co.

THIS book has a rightful place in the "Adventure Series." It contains most of Exquemelin's 'History of the Buccaneers,' and a selection from Johnson's 'General History of the Pyrates of New Providence.' There is a thoughtful introduction, but a grand opportunity for annotating the records of an obsolete form of social combination has not been taken advantage of. Here one may read of that dare-devil Frenchman François Lolonois, whose hatred of the Spaniards was equalled by the fierceness of his cruelty towards them. The acts of the famous Sir Henry Morgan, who, from serving his time as a bondsman in Barbados, rose to be an "Admiral" of Buccaneers and Lieutenant-Governor of Jamaica, are here set forth, down to his startling action in taking and sacking Panama. The desperate valor of the Buccaneers, their fertility of resource in cases of extremity, their shocking cruelties to the Spaniards, their wanton life at Port Royal, Jamaica, on their return with their "purchase," as, in Shaksperian phrase, they called their booty, will be found "writ large" in this volume.

Turning from the Buccaneers, who made war against the Spaniards, we come to the Pirates, who warred against mankind in general. With these it was, indeed, *homo homini lupus*. About that ferocious outcast Teach, nicknamed "Blackbeard," who for some time was the terror of the Carolina Coast, the most satisfactory piece of reading is that wherein we are told of the gallant way in which the naval Lieutenant, Maynard, tackled the ogre in a life-and-death struggle. The ignoble acts of Captain William Kid, whose proceedings caused so much concern to Lord Bellamont, are given in detail, down to the hanging, at Execution Dock, of the Captain and some of his fellows. Although Avery's fame was great, on account of his capture of a rich ship belonging to the Great Mogul, that worthy seems to have been fitter to be a pickpocket than a pirate. For a good first-class highwayman of the sea, give us Capt. Bartholomew Roberts, as bloody-handed a ruffian as ever lived. The ordinary black flag, which the pirates called by the pet name of Jolly Roger, did not suffice for him. Offended by attacks made upon him by orders from the Governors of Barbados and Martinique, he caused a new jack to be made and always to be used. On it was his own figure, standing upon two skulls, and under these were the letters A. B. H. and A. M. H., signifying a Barbadian's head and a Martinican's head. The destruction of this pirate and his horde, on the west coast of Africa, by Capt. Chaloner Ogle of the King's ship *Swallow*, was a notable service rendered to commerce.

Johnson has a quaint fashion of describing the ways of the Pirates. Take the case of Harry Glasby, who was guilty of one of the most heinous possible of offences against the piratical state—that of trying to run away. Being captured, he would surely have been condemned to death but for the powerful interposition of the Lord Ashplant. Imagine the pirate judges, a good deal the worse for liquor, and employed in smoking. Glasby, and two others who had tried to escape along with him, pleaded for arrest of judgment. This the Court would not grant, such was its abhorrence of their crime. Then arose Ashplant, one of the judges, and, taking his pipe out of his mouth, said "he had something to offer to the Court in behalf of one of the prisoners." Then, with a profusion of oaths, he announced that Glasby "should not die." Thereupon he sat down, resuming his pipe. His brother judges warmly dissented. Again Ashplant spoke, and, interjecting many oaths, announced that he was "as good a man as the best of them"; that he never turned his back to any man in his life, nor ever would. Glasby was, he said, an honest fellow, and he loved him notwithstanding his misfortune. Glasby, he hoped, would "live and repent what he had done"; but if he must die, asseverated Ashplant, "I will die along with him." And now, according to Johnson, "he pulled out a pair of pistols and presented them to some of the learned judges upon the bench, who, perceiving his argument so well supported, thought it reasonable that Glasby should be acquitted; and so they all came over to his opinion and allowed it to be law." The topsy-turvydom of the sense of right and wrong that is betrayed in Ashplant's hope that Glasby would "live and repent what he had done," was familiar to the gentlemen of fortune, as the pirates described themselves. Roberts, for instance, used to tell the new hands that when he first went into the business he had shed as many crocodile tears as did they, but that time and "good company" had worn it off. In a similar strain, Roberts wished farewell to another pirate band, hoping "the Lord would prosper their handy works."

The typographical get-up of this book is much to be commended. It is in marked contrast to the cruelly small print used in Walker's 1810 edition of the 'History of the Buccaneers.'

Outlines of Psychology. By Harald Höffding. Translated from the German by Mary E. Lowndes. Macmillan & Co. 1891. Pp. 365.

Mechanism and Personality: An Outline of Philosophy in the Light of the Latest Scientific Research. By Francis A. Shoup, D.D., Professor of Analytic Physics, University of the South. Boston: Ginn & Co. 1891. 12mo, pp. 343.

HÖFFDING'S 'Psychology' has had to pass through a second medium before it reached the English. There is danger of some refractions in it on this account. It was written in Danish and translated into German, while the English form is from the latter language. To the English translation the very highest praise can be given. Smooth, elegant, and graceful in style, it betrays no traces of its derivation from a foreign language. Like the translation of Lotze's 'Microcosmus' by Sir William Hamilton's daughter and Miss E. Constance Jones, the present volume shows a useful sphere for the intellectual activity of woman, and it is a considerable credit to the philosophic sympathies of the sex.

Few books are better adapted than this, in completeness of outline and material, for the purposes of advanced instruction on the subject of psychology, with the exception of one department of it. The first important merit of the work is its emphasis of the scientific as opposed to the metaphysical point of view in the study of psychology, and this is well expressed in the remark that the student of it is as little bound to give an explanation of what mind is, as physics is obliged to begin with an explanation of what matter is. How much greater an advance would psychology have made during the last half-century had such a maxim prevailed! But in spite of this the author has not cut entirely loose from metaphysical discussion. It is true that he does not begin with any special theory to defend or oppose, but at every point we are made to feel the connection between certain psychological facts and some metaphysical theory new or old, and scarcely any one could rival the author's faculty for blending the scientific and the metaphysical implications of his subject. Besides, although the author professes to have discarded philosophy and to have adopted the empirical position, an uncommon amount of scientific metaphysics, if we may use the expression, is unconsciously admitted into the discussion, showing that what critics of metaphysical psychology mean by the term is merely a particular set of views which they do not like. Metaphysics does not change its character by changing its name. The fact is, that the author is too deeply versed in modern philosophy to eliminate wholly its influence on his psychology. Throughout the entire work we feel the breath of a philosophic world blowing upon us. We do not entirely regret it, because, although psychology can be treated exclusively as a science, its chief interest lies in that borderland which connects it with philosophy. The author has most admirably developed that aspect of the subject.

It is only after the first hundred pages that we reach the scientific side of the problem. The division is into Sensation, Ideation, Perception of Time and Space, and the Perception of Reality, all four topics being comprehended under the general one of Cognition. The two later divisions are the Feelings and the Will. Sensation is adequately discussed, and, what is better, more correctly distinguished from perception than is usual, although all separation of them must be purely abstract. It is in the treatment of Ideation that both the greatest merits and the greatest defects of the work are discoverable. The close relation between the so-called higher brain processes and the lower could not be better treated. It is here that modern psychology is revolutionizing the mediæval and scholastic antithesis between the nature of sensations and the nature of thought. Pierre Janet's experiments upon the connection between anæsthesia and memory, along with many independent observations of others, and the modern faith in the continuity of all phenomena, have established this intimate connection in kind beyond a doubt. In view of this fact it would have been very interesting had the author discussed in a new light the rational processes of Conception, Judgment, and Reasoning. But they are dismissed in the most perfunctory manner, and the teacher must know all about the subject in order to supplement the author's shortcomings in this respect. Höffding's discussion of the Feelings is unusually full and excellent, although we think the term is given too comprehensive a meaning and is often very vaguely employed. Both in German and in English this conception needs careful clarifying. The treatment of the Will is nearly as exhaustive as Bain's, and is much more sober and philosophic.

'Mechanism and Personality' is, in some particulars, the direct opposite of Höffding's work. Its very title makes it a metaphysical study, and yet it purports to be psychology. Fortunately, it is more scientific than its name would imply. As an outline, comprehending both psychology and ethics, the work is not without merits of a kind, and especially shows considerable knowledge in detail of those subjects for a writer whose business is the teaching of physics. But he has not got beyond those who make psychology an introduction to philosophy. Hence he will most likely please those sectarian institutions which wish to inculcate metaphysics and at the same time coquet with science.

Riding and Polo. [Badminton Library.] Boston: Little, Brown & Co.

If life were all riding and polo—and there are certainly individuals who seem to live for very little else—this latest volume of the "Badminton Library" would contain the key to all its mysteries. The subject is handled by various writers from different points of view, and nothing of importance seems to have been overlooked. The reader is treated to a brave show of learning and to a bibliographical appendix, and with these aids is carried gently down the stream of riders from Pollux and Xenophon to Buffalo Bill. To the Greeks, indeed, full justice is done, for it is declared that they were ideal horsemen; and there is, in fact, much evidence to show that they excelled in riding as in most other things. But when it is solemnly stated that "no man can ride or drive like an Englishman," some scepticism may be permitted to those who have seen the riding of the cowboys on the plains and the driving of the stage-drivers in the mountains of some of our Western States. In two kinds of riding the English are undoubtedly preëminent, namely, riding to hounds and polo-playing; and in both of these they have the advantage of long experience and unlimited practice. In regard to polo, which is as yet in its infancy in this country, the superiority of the English players is largely due to their ponies. The game is played nowadays at great speed, and the Western ponies must be crossed with thoroughbreds in order to enable our players to compete on even terms with the English cracks. It is doubtful if riding to hounds will ever become popular here. Some of the strongest advocates of the sport are discouraged by the increasing use of wire fencing, but the Governor of New Zealand, in a chapter on the "Colonial Horse," avers that horses soon get accustomed to these fences, and that, in fact, fewer accidents occur in jumping them than among the old-fashioned hedges of the English shires.

Much valuable advice is here given as to the best method of bringing up young horses. Stress is rightly laid on the avoidance of undue severity and on the wonderful effect of the human voice in inducing obedience; and one of the truest remarks in the book is that "a horse's bad habits are almost invariably due to a man." Some of the distinguished contributors cannot write of horses without dragging in the wearisome Irish question, others have lax views as to the difference between "lay" and "lie," and others again are altogether too voluminous; but in spite of such obvious lack of editing, the book should be read by all who are interested in horse-flesh.

Are the Effects of Use and Disuse Inherited? An Examination of the Views held by Spencer and Darwin. By William Platt Ball. Macmillan & Co. 1890. 12mo, pp. xii., 156.

Among the numerous books that owe their existence to what "Darwin says" or "Darwin thinks," this is one of the latest. It is one for which the greater demand will undoubtedly come from those who, with its author, believe in the supreme potency of selection. It is not an impartial discussion of the views of Spencer and Darwin in favor of the inheritance of the effects of use and disuse, as might be expected from the title. Contributing little or nothing from his own observation, the author stands in a peculiar position throughout the essay. He discredits Darwin, on whom he relies for his own support, whenever Darwin may be cited in support of Spencer. Thus, Darwin is shown to be unreliable except when his views coincide with those advocated by Ball. Pangenesis, which might favor use-inheritance, is thrown aside; but sexual selection, thrown out by Wallace, is reinstated. Conclusions of Darwin quoted by Spencer are shown up as if based on incomplete observations, wrong interpretations, mistaken suppositions; or it is asserted that the facts may be due to other than the assigned causes, may be simulations, might be coincidences, might be effects of selection, etc., etc. Yet the opinion of the author as to what certain phenomena may, might, or would do, put forward as if proving something, can have no weight with readers who do not admit that the theory on which he bases his possibilities has been sufficiently proved. Exceptions to his attributes of selection render his structure unstable. He admits that use is the determining circumstance in evolution generally, that all organs and faculties can only have been moulded by usefulness and by using, but, he adds, not necessarily by directly inherited effects of use and disuse of parts in the individual. With his own definitions and limitations to direct effects in kind, etc., it is this negative he attempts to establish; but, even with the favoring restrictions, his presentation of the matter has the appearance of an earnest plea for suspension of judgment rather than that of a convincing argument.

The Unearned Increment; or, Reaping without Sowing. By William Harbutt Dawson. London: Swan Sonnenschein & Co.

This little book has the distinction if not the merit of advocating the confiscation of property in land with no violence of language. It contains also some very just complaints against the English practice of making public improvements without assessing any of the expense upon the property that is benefited—a practice that could obviously be changed without impairing any vested right. Otherwise there is nothing novel in the book, and we may advantageously devote our attention to what is not in it, nor in other books of its class—an examination of the assumptions upon which this theory of confiscation proceeds.

For this purpose we may concede that rent, in the economic sense, represents a value to which landlords have made no contribution, although as a matter of fact this concession would be far from proper, the receipts of landowners as a class for rent being to a considerable extent balanced by their expenditure for the same account. But letting the concession stand, the first assumption is that justice requires that unearned value in the shape of rent should be taken away by law from those in whom the law has hitherto recognized a title to it. It is evident that this is a particular case under a more general law, that justice requires the abolition of property in all unearned values. The gains of personal property made by every successful speculator are as much within the purview of this law as the rent of land, and it would not be easy to exclude from it the advantages due to any exceptional personal endowment. It cannot be objected that there would be practical difficulties in applying the law to other values than that of land, for that at once reduces the whole matter to the test of expediency, and we are then remitted to the forum of experience in order to determine whether any particular right of property has been found to be, on the whole, conducive to the progress of civilization, and whether the process of confiscation is not likely to cause disasters that would outweigh its gains. To this court the landlords could not refuse to go, unless they insisted upon the absolute sanctity of proprietary right, in which case they would make assumptions more sweeping than those of their adversaries.

The second assumption is that justice requires that the unearned value of land when confiscated should be distributed among "society." This proposition is subject to the same enlargement as the other, but a more serious objection arises from its ambiguity. It involves the assumption that the value not earned by landlords has been earned by all other human beings. But it is evident that this is not true, for the world is full of other miscreants than landlords, who occasion such an enormous expense in the shape of policemen and courts and prisons and locks and bolts and bars as to reduce materially the values of all property. The value in question, therefore, must be distributed, not among all, but among some human beings. But which, and in what proportions? It would seem that the distribution should be confined to the virtuous

members of "society," excluding those who as landlords have touched the "accursed thing," but as to the proportions, it does not seem possible even to guess at what justice would require.

This difficulty is generally met by theorists of this class with a fallacy of division. After showing that "society" at large has caused the increased value of land, they immediately proceed to assume that the increased value of the land within the spatial limits of any political body is due to those human beings who reside within those limits, and should be distributed among them. The preposterous character of this assumption appears upon a moment's reflection. Who will seriously contend that the value of land within the city of New York is caused by the inhabitants of that city? It is at least partly due to the natural advantages of that place. Situated as it is, it levies a toll upon a great part of the products of the United States, upon a considerable part of the products of the world. Did the dwellers in New York city establish the course of the Hudson River, or did they excavate the Erie Canal? Did they construct their magnificent harbor, or pay for the railways that pour into their lap the wealth of the prairies of the West? *Fiat justitia, ruat cœlum.* If the landlords of New York are to be dispossessed in the name of justice, the spoils rightfully belong to the whole body of men to whose existence they are due, and not alone to those existing within the city. No practical difficulties can stand in the way of an absolute law. The foul stain of landlordism is not wiped out by substituting a municipal corporation for an individual, nor can an injustice to society at large be remedied by favoring some fortunate communities.

The position of the English advocates of confiscation is especially weak. The inhabitants of the British Isles, having by the strong hand subdued many other races and established their dominion over a great part of the surface of the globe, to the considerable "increment" of the value of that minute portion inhabited by themselves, are now told that "justice" demands that this increment must be restored—to the inhabitants of the British Isles, many of whom have earned it only by having been good enough to be born. It is not easy to construct a definition of justice that shall satisfy the requirements of this situation, but it may be seriously urged that such a definition should be presented before the process of confiscation is begun. Confiscation in the name of justice is a dangerous measure. "Let no one," said Machiavelli, "who begins an innovation in a State expect that he shall stop it at his pleasure, or regulate it according to his intention."

We are far from denying that the spectacle of wealth in the hands of men who have obtained it without rendering any service to their fellows arouses indignation. But the surest way to perpetuate such abuses is to proclaim the principle that proprietary rights acquired under the protection of law may at any time be deprived of that protection. Such a principle, if adopted in practice, would destroy civilization, by making the acquisition of property a matter of speculation. The accumulation of wealth takes place only when men become assured that they may reasonably count upon the stability of law. Hardly any result is so desirable as to be worth attaining at the cost of shattering this confidence. If the reformers whose theories we have criticised had contented themselves with proposing special taxation upon future "unearned increments," they might have accomplished something. As it is, their scheme has so shocked the common morality as to have rendered odious all attempts at scientific taxation. Mr. D. A. Wells long since pointed out the direction which these attempts should take, but it would be hopeless at present to advocate any plan that might be confounded by the public with the scheme for the confiscation of rent.

BOOKS OF THE WEEK.

Babson, J. J. Notes and Additions to the History of Gloucester. 2d series. Salem, Mass.: The Salem Press.
Clarke, W. H. The People's Horse, Cattle, Sheep, and Swine Doctor. New York: M. T. Richardson. $1.
